Preventives of Inflation

By MARRINER S. ECCLES* Chairman, Board of Governors, Federal Reserve System

Maintaining That Price Control Is the Last Bulwark Against Increasing Living Costs, Chairman Eccles Recommends as Preventives of Inflation: (1) Curbing Increase in Money Supply; (2) Increasing Available Goods and Services; (3) Balancing the Budget, and (4) Allowing Wage Increases Only When They Can Be Offset by Greater Productivity With No Price Increase. Reiterates Advocacy of Increased Taxes on Speculation and on Sale of Capital Assets.

to spend it far exceeds the volume of goods and services available. The more this money supply exceeds the volume of goods, the greater the inflationary pressures are certain to

It is beyond dispute that the money supply today at an all time high

The Market Outlook and **Appropriate Investment Policy**

By DR. WILLIAM F. EDWARDS Partner, Naess & Cummings

Investment Analyst Forecasts a Sustained Period of Booming Production and Business, Supported by Deferred and Self-Generating Demand. Stating That We Cannot Out-Produce War-Created Dollars, Dr. Edwards Expects the Government's Inflation Policies to Promote Active Business at Higher Prices. Advances Reasons for Doubling the Probability of a Deflationary Spiral. Expects Substantially Higher Common Stock Prices and Holds That an Intermediate Decline Below the Dow Jones (180-185) Level Is Unjustified. The British Market's Strength in the Face of the Drastic Political Upheaval is Cited.

This Committee would agree, I think, that inflationary dangers

upon which we are basing our discussion rest on the United States Fiscal and Monetary Requisites For Peacetime Prosperity

By MURRAY SHIELDS* Vice-President and Economist, Bank of the Manhattan Co.

Pointing Out That Our Financial Reconversion Has Lagged Discouragingly Behind Our Physical Reconversion, Mr. Shields Declares That Our Fiscal and Monetary Authorities Do Not Realize That Policies Demanded by War Exigencies Are Not Suitable for Peacetime. As Essential Steps in Financial Reconversion He Urges Budget Balancing, Debt Reorganization, and Revitalization of Federal Reserve Controls. Insists That Government Expenditures Can Be Promptly Reduced to \$15 Billion and the Budget Balanced by (1) More Efficient Planning of Military Expenditures, (2) Elimination of All Unnecessary Public Works, (3) Discontinuation of Costly Aids to Agriculture, (4) Avoidance of Duplication in Government Expenses, (5) Liquidation of the Emergency Credit Institutions, and (6) Postponement of the "Cradie

The dominating factor in the present fiscal and banking situa-tion is the war-time increase in the public debt. This debt has increased in the

past few years by nearly a quarter of a trillion dollars. It was about half the national income and a fraction the national wealth before the war; to-day it is nearly twice the national income and approximately equal to the national

the volume of bank deposits expanding by \$80,000,000,000 to a level in excess of \$150,000,000,000. The volume of liquid funds in the hands of the people now exceeds \$180,000,000,000, an amount more than double our pre-war national income. These magnitudes involve a serious threat to the stability of the economy, for it is out of such situations that enterprise-deadening inflations are born.

present situation calls clearly for a new set of financial ground rules. The monetary and banking policies of the period following World War I will not do; they helped bring on the boom of the late twenties and its sequel of violent deflation. The policies of the thirties will not do; they represented an effort to combat deflation and to alleviate distress by manipulated reflation. Such policies would be entirely out of place in meeting the problem we now face, namely, how to maintain and preserve prosperity without permitting it to degenerate into a credit-fed inflation.

A Program for Financial Reconversion

The guiding objectives of postwar financial policy should be to void inflation or deflation and to facilitate the expansion of private enterprise and private in-

By PAUL A. PORTER*

Administrator, Office of Price Administration

New OPA Director, Contending That His Organization Is Not in Receivership, Asserts That Price Controls Will Be Maintained, but That He Will Follow Policy of Price Adjustments Without Sacrifice of Price Stability. Attacks Opponents as Wanting to Pawn America's Future "for a Pot of Paper Profits" and Defends the "Cost Absorption" Principle on Ground That With Repeal of Excess Profits Taxes Profits Will Be at Record Heights in 1946. Denies Controls Are Impeding Production and Refutes Argument That Absence of Controls Will Permit Prices, Buying Power and Living Standards to Return to Normal. Contends Weight of Public Opinion Is for Continuation of Price Controls.

In this, my first public appearance since I have shifted to the

finished credo. I have had a good deal of advice in these last few days; but most of my friends speak to me with the somber and moattitude rose as if there had just been a death in the family. Now I'm all for having a bar-rel of fun but somehow or other a lot of perfectly re-

sponsible people seem to be suggesting that the fight against inflation is a millstone chained around our collective necks and that we are going to be pushed overboard any minute now. So I would like to attempt to talk briefly to the banking fraternity about a few facts

in recent days. But first a word about bankers. If, in some select quarters, we of the OPA are going to continue in the role of the whipping boy, I think you of the banking group can appreciate as much as anybody I know just how uncomfortable and inequitable such a position can sometimes become. I re-member because I came to Washington in 1933. That was the year of the locust, and in those fateful days it is doubtful if you would have been able to find enough bankers with the bravado to assemble openly in such numbers as

The bankers' lot then was indeed a mournful one. He was the displaced person—a refugee from has the task of making a livable are mistaken. One of our most Cleveland, O., Jan. 25, 1946. (Continued on page 1121) (Continued on page 1116) his depositors. Nobody loved the bankers. We have come a long way since then. The question is whether we are going back to the 1946. days when respectable fathers would pause before letting their daughters be courted by a bankers' son.

I see here tonight.

Quite obviously we don't want to return to the time when such eminently responsible and re-

OPA Will Hold the Line A Uniform Treasury Certificate As Bank Reserve

By LAWRENCE H. SELTZER* Professor of Economics, Wayne University

Dr. Seltzer Points Out the Expanded Role of Government in Economic Affairs Resulting From the Huge Public Debt, and Which Has Changed Main Base of Commercial Banking From Granting Private Loans to the Holding of Government Obligations. Says Commercial Lending Facilities Have Been Greatly Impaired and Whole Pattern of Central Banking Altered. Advocates as a Solution to Problem a Uniform Low-Interest Non-Negotiable Treasury Certificate Payable on Demand to Be Held by Banks as a Special Required Reserve. Says It Would Insure Bank Earnings, Remove Danger to Banks by Change in Interest Rates, and Coordinate Credit and Fiscal Policies.

The Second World War and the preceding decade of depression, tranquil scenes of OPA, I am not prepared to come forward with a deficit financing, and expansion of the role of Government in eco-

nomic affairs have profoundly al-tered the environment of central bankng in the United States. Among the major changes have been: First, fareaching

shifts in the climate of opinion: Second, the

rise of new Governmental tools for deliberate exertion of mone-

tary influence, not yet coordinated with Federal Reserve machinery; Third, the emergence of a public debt so big that even moderate

increases in interest rates, one of the principal tools of traditional central banking management, would produce very sizable increases in the Government's interest costs:

Fourth, a vast increase in the public's holding of currency, bank deposits, and Government securiities without a commensurate increase in output or prices; and

Fifth, the transformation of our commercial banking system from one in which the public's cash and the earnings of banks were mainly based upon loans to private business to one in which they are

*Excerpt from a paper by Prof. Seltzer, entitled "The Changed Environment of Monetary Banking Policy," presented before the American Economic Association,

(Continued on page 1116)

Removal of Price Control

By ZENAS L. POTTER* Special Assistant in Charge of Congressional Relations, Office of Price Administration

Asserting That the NAM in Opposing Continuation of Price Control Does Not "Have a Salable Product," OPA Official Contends That Removal of Controls Will Cause Inflation and Economic Suffering as After World War I. Contends That Present Buying Power Is Much in Excess of Pre-War Volume and That Price Control Removal Will Bring Spiral of Inflation and Subsequent Collapse. Says Controls Are Not Interfering With Production and Outlines Three Stages of Decontrol: (1) Period of Shortages, Wage Adjustments and Interrupted Output; (2) Period of Wage and Cost Stabilization, and (3) Period of Capacity Production, Full Employment and Stable Costs. Replying to Mr. Potter's Contentions, E. N. Allen, of Hartford, Conn., Asserts OPA Is Applying Wrong Medicine and That Inflation Already Is Here.

Not long since I was a speaker at a meeting in a Southern city at which Gene Kelly, the moving picture actor, also was to make an

address. I finally got word in my hotel room that they were ready pattern out of the broken pieces to take me to the auditorium. I of the government's previous of life as I have discovered them entered the elevator, unaware of wage-price policy. The President any special circumstance but when the door was opened, after the details as to whom and how wage descent, the hotel lobby was increases may be reflected in crowded with bobby-soxers, ready price increases depend upon Mr. to scream, then swoon, upon the Bowles' program. Many labor expected appearance of Gene controversies remain unsettled; Kelly. When I emerged they said awaiting his pronouncement. Uninstead, "Oh-h-h-h."

I am sure that tonight you also feel like saying "Oh-h-h-h!" I am as disappointing a substitute for Chester Bowles as I was for Gene Kelly.

Mr. Bowles, however, has had placed upon his shoulders an even greater responsibility than that which rested upon them when your invitation was extended to him. He tion, I want to assure you that you

A Tax Program for **A Working America**

Former Under Secretary of the Treasury

Mr. Magill, in Pointing Out Tax Changes Which Will Restore a Working America to a Prosperous Peacetime Economy, Advocates (1) Elimination of Double Tax on Dividend Income; (2) Reduction of Personal Income Surtax Rates Particularly in Higher Brackets, With Maximum of 50%; (3) More Liberal Deductions to Cover Depreciation and Obsolescence of Equipment; and (4) a Balanced Federal Budget, With More Control Over Government Expenditures. Says Government's Debt and Labor Policies Encouraged More Serious Inflation Than Price Controls Have Retarded.

You and I can both wish, though perhaps for different reasons, that this address did not have to be delivered at this particular time.

The headlines

page of any newspaper indicate to the American reader a time confusion and industrial stalemate. contrasting sharply with the temper of the country just a few months ago. Then we had a clear policy -to produce mightily and to win the war - and we

were united in driving forward for its accomplishment. Today we can take little satisfaction in harddriving accomplishment, for there is not enough of it. A lot of us seem to want to sit these months out, even though the sitters know that New York may freeze and

on the first, Europe may starve while they

Before the end of the war, statesmen were pretty well agreed that the great task at the end of the war would be rapid reconversion to the production of goods for the repair of the destruction of war and for the use of a civilization at peace. We have tremendous plants, we have an enormous force of skilled labor, we have managements that demonstrated amazing capacity and ingenuity during the war. It seemed that all that was needed was a government wise enough to get out of the way and let our industries go to work. But, of course, it wasn't quite as simple as that. Govern-

Organization Meeting of International Fund and Bank

Mr. Bratter Analyzes the Problems Facing the Forthcoming Organization Meeting to Set Up the International Monetary Fund and the World Bank. Holds It Probable That Assistant Secretary of the Treasury, Harry White, Will Be Executive Director of Fund, and That Site of Institutions May Be Same as UNO. Sees Uncertainty Regarding Russia's Participation and Need for Greater Clarification of Functions of Both Fund and Bank, and Notes That World Conditions Have Changed Since Institutions Were Devised at Bretton Woods. Admittance of Additional Members Seen Major Problem.

On March 8 at the Hotel General Oglethorpe on Wilmington Island near Savannah, Ga., representatives of 35 nations will come

together to set national Monetary Fund and the International Bank for Reconstruction and Development in acthe Bretton Woods Agreements. The conference, to which invita-

tions were extended by the United States government in Herbert M. Bratter January, is expected to complete its business within two weeks. Actually, the work the conference has to do could be completed in much less time. It is hoped that within the fortnight of meetings some of the governments which attended the BW Conference in 1944 but which have not yet adhered to the agreements

will do so. These countries, all of which have been invited to send observers to the Georgia meeting, are: Australia, El Salvador, Den-mark, Haiti, Liberia, New Zealand, Nicaragua, Panama, USSR and Venezuela. Moreover, Colombia has joined the Fund but not the Bank, a situation which Washington officials hope will be rectified. It seems that the Colombian legislature adjourned after approving

the Fund but before endorsing the

Although the work of the Georgia conference can be handled expeditiously, the Fund and Bank are not expected to start functioning for several months thereafter. Thus, although the Treasury started its bilateral discussions with other governments several vears ago and although the Bretton Woods Conference was concluded in July 1944—one of the very first "postwar" projects of the United Nations-the UNO has preceded the Fund and Bank into being. Since the United States is the one country whose participation in the Bretton Woods program is indispensable, all other countries waited for Congress to approve the plans. However, it was not until Feb. 15, 1945, that the Administration introduced the necessary legislation, Congressional hearings were not completed until almost the end of

up the Inter- June, and the amended bill did not become law until July 31.

Thereafter, it seemed, the other countries wanted to await Britain's approval of the Fund and Bank, and this was not forthcoming until after the conclusion early in December of the Anglo-American financial agreement. Parliament's cordance with ultimate approval later that month therefore occurred only shortly before the Bretton Woods agreements' deadline of Dec. 31, 1945. By that date, as stated above, 35 countries in all had given their approval to the Fund (and 34 to the Bank); but some of the other signatories which for one reason or another had delayed their approval could not at that late date get their legislatures together to act. The most conspicuous holdout, of course, has been the USSR, for whose abstention thus far the just-mentioned excuse does not apply. The abstention of Australia and New Zealand is attributable to profound misgivings concerning Bretton Woods rather than inertia, and it is not at all sure that they will join the Fund and Bank anytime soon. (Australia's objections were recorded in the minutes of the Bretton Woods Conference and published in the "Chronicle"

of Oct. 26, 1946, p. 1820.) Whether Russia will attend the Georgia Conference is still unknown. In conformance with the 'keep them guessing" policy, Russia, whose presence at the State Department BW signing ceremony in December was vainly hoped for until the last moment, to date has not even acknowledged receipt of

Evils of Compulsory Military Training

By H. C. HOLDRIDGE* Brigadier-General, U.S.A. (Retired)

Retired Army Officer, Asserting That Compulsory Military Training Will Defeat the Very Ends It Is Intended to Accomplish, Contends That (1) It Will Fail to Achieve Security; (2) It Will Waste Our Resources; (3) It Will Waste Lives of 18-Year-Old Boys; (4) It Will Jeopardize Democracy; (5) It Will Foster Totalitarianism and an Obsolete Military Philosophy; and (6) Will Pave Way for Another War. Says the Training Would Result in "Boon-Doggling" and Will Be Evaded, and urges Restudy of Our National Defense in Line With New Techniques and New Weapons. Calls for Elimination of Caste System in Army.

Mr. Chairman and Committee Members: I am Brigadier-General H. C. Holdridge, U. S. Army (retired). I graduated from West Point

in 1917, and served a total of almost 30 years in the army. For six years I was an instructor and assistant professor of history at West Point. My service in the army was chiefly at larger headquarters commanded by our senior general officers. I grad-

uated from the Command Leavenworth in 1938. At the outing in the Adjutant's General's the army inside and out, and from office, War Department, as Plans a perspective seldom enjoyed by and Training Officer, responsbile for the development and establishment of new techniques of business and personnel manage-

My last military assignment, Holdridge represented to from 1940 to 1943, was as Com-mandant of the Adjutant Gen- (Continued on page

eral's School, Fort Washington, Md., and as Director of Schools Training of the Army Administration Schools located at as many as 18 colleges and universities, all of which I established, and which taught business and personal management for the entire army. These schools turned out, during my command, approximately 35,000 students. I was honorably retired in February 1944 for physical disability in-curred in line of duty I am, at present, Chairman of the Legislative Committee of the Veterans League of America, an organization of veterans and merchant seamen of World War II. The views I am presenting represent the official stand of that organizaand General Staff School at Fort tion. These views are the result of my 30 years of military service break of World War II I was sery- during which I learned to know

British Banking Sums Up Economic Position

By NORMAN CRUMP

Financial Editor of the London "Sunday Times"

British Financial Observer, in Reviewing Opinions of Bankers on Britain's Banking and Financial Prospects, Notes a Feeling of Tempered Optimism. Though Difficulties Ahead Are Noted, There Is Strong Faith in the Nation's Power of Recovery. There Is Generally Favorable Comment Regarding the American Loan, and Guarded Utterances Regarding British Domestic Politics, With an Acquiescence of the Bank of England's Nationalization.

The annual addresses by the Chairmen of Britain's leading banks have long been rightly regarded as constituting a valuable examina-

tion of Britain's economic position.

There are certain features common to all their latest pronouncements.

One is the fact that for the first time since the outbreak of World War II. the decline in advances which registered every year up to the end of 1944, has been

reversed. Advances at the end of 1945 were noticeably greater than at the end of 1944.

Norman Crump

The Chairmen naturally feel that it is a little premature to attempt a full interpretation of this increase. Mr. Fisher of Barclays Bank says that it is partly due to special costs incurred by indus-trialists as the result of the end of the war, and that one could hardly yet adduce it as evidence of an incipient business revival. Lord Linlithgow, the new Chairman of the Midland Bank, alluded to his predecessor's promise of two years ago to the effect that in future

application for advances could be based as much on the character, integrity and business capacity of the borrower as upon his material resources. He now reveals that already advances of this character exceed £1,500,000 (\$6,000,000).

Lord Linlithgow also discussed the revival in overseas trade. During the year 1945 the volume of the bank's acceptances and confirmed credits had been multiplied by three. When it is remembered how important the bill of exchange is as an instrument for financing international trade, the significance of the expansion in this form of banking activity becomes apparent. Nevertheles, neither Lord Linlithgow nor any other banker would maintain that British export trade had done more than make a good beginning.

Reduction in Interest Rates

Most bankers, of course, discussed last autumn's reduction in the interest rates payable by the British Government on Treasury bills and Treasury Deposit Receipt loans. These are the chief instruments whereby the banks provide the Government with short-term loans, and during the war they have loomed very large in the bank accounts. The reduction in interest rates from 11/8 to

21 States Set Jan. 1 as **Assessment Date**

To properly implement the provisions of the new Missouri constitution adopted early in 1945 the Missouri legislature shifted the assessment date for real property from June 1 to Jan. 1, the National Association of Assessing Officers reports.

This action brought to 21 the number of states using Jan. 1, or some other date in January, as the assessment date for real estate. In addition to Missouri, these are: Arkansas, Florida, Georgia, Idaho, Iowa, Louisiana, Maryland, Massachusetts, Mississippi, New Mexico, Oklahoma, Oregon, South Carolina, Tennessee, Texas, Utah, Virginia, Washington, North Carolina and West Virginia.

April dates for assessment are preferred by eight states including: Illinois, Maine, Michigan, Nebraska, New Hampshire, North Dakota, Ohio and Vermont.

Real property is assessed in five states during the month of March. The states are California, Colorado, Indiana, Kansas and Mon-

Wyoming makes assessments in February; Minnesota, South Dakota and Wisconsin in May. Rhode Island assesses real property in June, and Kentucky, New York and the District of Columbia in July. Alabama, Connecticut and New Jersey make assessments in October.

Four states—Arizona, Delaware, Nevada, and Pennsylvania-have not designated particular dates for assessing real property in the general law.

Ways to Industrial Peace

Mr. Richberg Maintains That Labor Leaders Have Assumed a Dictatorial Attitude, Not Only Because They Have Power Without Public Responsibility, but Also Because They Fear That Scheming Radicals Will Capture Their Unions if They Deal Fairly With Management. Blames Management for Having No Agreed Program and Calls Upon Government to Set Up Machinery for Enforcing Industrial Peace and Thereby Not Permit Domination of a Class Interest. Holds Special Privileges Have Been Given to Unions Which Create Labor Monopolies and Destroy Private Enterprise and Urges Nation Be Given New Birth of Freedom by Destroying Government by Class.

The road to industrial peace will not be found by following the short sighted leadership of organized labor or the muddled leader-

ship of indusment.

The dictatoconspicuous labor leaders is not simply power without public responalso the outfear—an ever pressing fear that scheming trol of their unions if they

Donald R. Richberg

show any desire to deal fairly with management. That is why men who have as much sense as Murray and Green and Lewis rave like demagogues against every practical effort to settle labor disputes by a rule of reason instead of by a rule of force.

Fear of losing their power has given these labor leaders such a low boiling point that the mere suggestion of any legal restraint makes them positively steam with fright. Yet their bullying, browbeating, hell-raising tactics become day by day more destructive to public interests and to the liberties of all the rest of the

President Truman made the mild proposal that in disputes of major importance the starting of civil warfare should be deferred for 30 days so that a presidential commission could have a chance to make an investigation and a report that might lead to a settlement. Whereupon Philip Murray

trial manage- denounced the President for what he called yielding in "abject cow-ardice" to the "arrogance" of inrial attitude of dustrial management. But a few weeks later Murray did not call it "abject cowardice" for the President to yield to the "arrogance" the product of of labor. On the contrary, Murtoo much ray thought it was quite right to reward labor for needless, lawpublic respon-sibility. It is contracts. He thought it was quite right to reward labor for scorning cropping of government mediation and fighting against government fact-finding. He thought it was quite right to reward labor for its brutal disradicals will regard for the general welfare, capture con-trol of their which had not been justified by any earnings.

According to the Murray logic there is no "abject cowardice" in yielding to such labor "arrogance." That is statesmanship. But, to suggest that labor leaders should fulfill their public responsibilities is a sin, calling forth the choicest vituperation in the well-stocked vocabularies of labor politicians.

Management Has No Program

It is most unfortunate that at this time industrial managers have no agreed and practical program for industrial peace. Some apparently want a fight to the finish against labor unions, with the government acting only as the umpire of an old-fashioned trialby-combat. Others want government to deny special privileges and immunities to unions that break their contracts or carry on strikes with deliberate, ruthless violence. Others want more effective mediation and fact-finding by government, but with no compulsions on labor or management even to defer using legalized force against each other.

It is evident that businessmen as a rule are fearful of extending the government regulation of labor relations. This is largely the result of a widespread feeling that politicians in public office will usually favor the voting power of the unions and find it safer to maintain peace by satisfying (Continued on page 1112)

Price Rises or Deflation?

By EDSON GOULD*

Market Analyst Argues That We Are Not in the Beginning of a Deflation Spiral That Will Carry Stock Prices Well Below Recent Levels. Sees Nothing New in the "Price Squeeze" and Contends That Eventually Political Desirability of Increasing Production Will Triumph Over Efforts to Get Something for Nothing by Raising Wages and Holding Down Profits and Prices. Maintains Inflation Fears Are Not Well Grounded and That Conditions Working Against Inflation Exist Now That Were Absent After World War I. Concludes Long Term Outlook Favors Retention of Stocks and Looks for Another Vigorous Upward Movement.

The factor that has contributed most to the sharp reduction of confidence in the outlook for industrial activity, corporation earn-

ings and stock prices in the dum "Prices, Wages & Profits' recent past is stated: "The American economy the spectacle at present, so far as manufacturof indefinite ing industry is concerned, is not continuance of in balance. The rise in wage costs Government and the fixing of prices have just control over about eliminated profit margins in industry, all protests to the wages, prices and profits. contrary notwithstanding.

Thebig "... Profit margins of manufacquestion con- turing industries in one way or fronting stock another will be restored. Either investors is costs will be sharply reduced or prices will rise." whether the recent decline

Some betterment in profit margins followed the ending of the war, but whatever increase thereby occurred has been or will, in most instances, be more than cancelled by the wage increases of 15% to 18% to which the Government has given assent unless, of course, prices are increased.

Price Rise vs. Deflation

Undoubtedly the political undesirability of rising living costs has been an important determinant in the policies thus far announced by the Government, but even from a political point of view such an attitude is hard to explain, except on ideological grounds of desire to effect an organic change in the whole economy, that is, to substitute full scale totalitarianism for our present harassed capitalism.

Sooner or later the political desirability of getting production, even if accompanied by corporate profits and higher prices, will triumph over present misguided efforts to get something for nothing by raising wages and holding down prices. It requires no high degree of political sagacity to conclude that a period of deflation akin to 1937 or that following 1929 would be politically more costly and damaging than the moderate increase in prices that would permit full scale resumption of industrial activity with accompanying large scale employment and spending.

Inflation Fears

THE COMMERCIAL & FINANCIAL CHRONICLE

As a matter of fact intense inflation fears, so far as large rises in goods prices are concerned, are not well grounded. Comparisons have loosely been made with the post-World War I period. The current situation is almost the reverse of that which then obtained. The period following World War I was one of capital shortage and a deficiency, in relation to demand, of goods-producing capacity. The sharp rise in commodity prices that then occurred, as well as the high long term interest rates that then obtained, were both indicative of that situation. Today there is no shortage of capital, no shortage of goods-producing capacity. Record low interest rates and the failure of commodity prices to rise more than they have, even granting governmental controls, are indicative of a situation which is the exact antithesis of that of 25 years ago.

Wars are, of course, inflationary and the huge budgetary deficits of recent years have had the effect of enlarging the supply of money that has in turn brought on a process of erosion in the purchasing power of the dollar.

That which gives the appearance of a terrific inflationary pressure is the throttling of supply at the source by a multitude of restrictions.

Earnings and Dividends

It is a foregone conclusion that first half earnings will not be good. It is doubtful that that consideration is an important element making for bearish sentiment toward stock prices.

What will prove important to the trend of the market over coming months will be the level of dividend payments. Should the whole industrial situation become further snarled to the extent of influencing boards of directors of leading corporations to reduce or pass dividends, the effect on the market would, of course, be adverse. However, the strong posi-tion of corporate treasuries plus the cushioning effect of the carryback provisions of the tax laws suggest maintenance of dividend rates in most instances, providing only confidence in the longer outlook is not further greatly im-

Market "Overbought"

The recent revulsion of financial sentiment came on a market that had been rising ever since last August with very little in the way of intermediate reactions. In view of the vigor and speed of the long advance, the yielding of the

price structure to selling pressure was not too surprising.

In a recent memorandum "Market Enters Volatile Phase" it was stated: "It appears reasonable to expect at this stage of the market a wider amplitude of movement than witnessed over recent months. Whereas for a long time the rises have been characterized by steep advances, punctuated by little more than sideward movements, from here on more decisive fluctuations in both directions, on a still rising plane, however, are to be expected."

That is just what we have been seeing and are likely to continue to see. The thinness of the market combined with important events and decisions that result in sudden shifts in financial sentiment seem certain to produce a market that will continue to swing widely.

Present Outlook

What is needed to reinstate confidence in the outlook and to bring a real reversal in the trend of stock prices is more tangible evidence of probability of a re-sumption of industrial production than witnessed thus far. Continued vacillation in policy-making upon the part of the Government and further spreading of uneasiness over the outlook could bring substantial further delay in resumption of industrial activity, but it seems more reasonable to believe that the apparent impossibility and impracticability of recently enunciated policies may bring an early change in Administration attitude.

The long term outlook continues sufficiently good to justify retention of stocks held on a truly long term basis. The intermediate term outlook also suggests retention of holdings on the premise that this whole phase of advance from late 1943 to date has not yet ended, even though it may be in process suggests some further decline that may or may not go to moderately lower than recent levels, and then another vigorous upward move-

Immunities Given UNO Representatves

The usual diplomatic immunities, privileges and exemptions were granted by an executive order of President Truman on Feb. 19 to representatives of the United Nations Organization, the Pan American Union, the United Nations Relief and Rehabilitation Administration, the International Labor Organization and International Food and Agricultural Organization, under authority existing in legislation passed by Congress, special advices from Washington to the New York "Times" stated, and went on to say:

"The matters with which the order dealt were of such nature as exemption of representatives of these organizations from immigration restrictions, from income tax on their official salaries, from registration as aliens and exemption from arrests for acts committed in the course of their official duties. These privileges • will ultimately be extended to several thousand employees of these organizations, especially after the UNO has es-tablished its permanent headquarters in the United States.

"The Preparatory Commission of the UNO drew up a draft convention between the UNO and the United States, which it suggested might be used in the event the organization decided to establish its headquarters in this country. The draft, however, does not fully meet the views of the United States officials dealing with the matter, it is understood, and revisions are being made.

"At the State Department it is hoped that the matter can be worked out by agreement of the Federal and State governments concerned, without raising any new constitutional problems. It is argued that no cession of territory is envisaged and that the UNO would merely buy or lease lands of ending. The near term outlook and buildings in the same manner as a private occupant. However, in the event that owners refused to sell or rent, it is conceded that the public interest might have to intervene in the form of expropriation."

Bill on Japanese Money Payments

An act passed by the Philippine Commonwealth Congress, designed to make valid payments made in Japanese invasion money while the Japanese occupied the Islands, was vetoed by President Truman on Feb. 7, United Press Washington advices stated. Acting shortly after a conference with U.S. High Commissioner to the Philippines Paul V. McNutt, recently returned to this country, the President said that the act would have legalized 'transactions and payments made under the brutal Japanese regime, without regard for the actual value of the Japanese-backed currency with which such payments were made." The press advices added:

In a letter to Philippine President Sergio Osmena, Mr. Truman declared that if the act had become law it would have retarded rather than aided the economic rehabilitation of the Philippines.

"I do not know what motives actuated the Philippines Congress in taking this step," the President said, "but I cannot properly discharge my responsibilities to the people of the Philippines without disapproving this act."

Public Utility Securities

General Public Utilities

Mr. A. F. Tegen, President of General Public Utilities Corp., (surviving company of Assocated Gas & Electric) recently addressed the New York Society of Security Analysts, presenting data on the company's position as of Jan. 1, 1946. He stated that the company expects to carry its investments on its own books and the books of its subholding companies, except Associated Electric Company, on the

basis of the value found by the Court in the bankruptcy proceedings. While the SEC has not yet given final approval to the figures, Mr. Tegen thinks there will be no substantial changes. Comstock would etoted at. \$37, 682,500, capital surplus at \$66,239,223

A. F. Tegen

and net current assets would amount to \$7,213,853.

Associated Electric Company, an important subholding company, has been excluded with its subsidiaries from the earnings statements, and its balance sheet figures have not been adjusted, because of the problems involved in rehabilitating the properties owned by its Philippine Islands subsidiaries.

The consolidated statement of income shows that, over a period of years, the subsidiaries have more than retained their gross income. In 1945 consolidated net income (before any special tax savings resulting from reorganization) was \$10,910,400. However, this net was after deduction of interest and preferred dividends totalling \$11,289,000. Giving effect to refundings and other capital changes in 1945, these deductions would be reduced to an annual amount of \$10,189,764. While the saving of approximately \$1,100,-000 would be offset by about \$300,000 additional taxes, net income would be increased to \$11,-709,761. From this it would be necessary to deduct parent company interest and expenses which would leave a net income estimated at \$11,120,183. This figure would be at the rate of \$1.48 per share for the common stock expected to be issued in consummation of the recapitalization plan.

Mr. Tegen indicated that GPU's

subsidiaries are in excellent position to carry on during the reconversion period, and they are also in sound current position to proceed with a heavy construction program. However, rehabilitation in the Philippines is proceeding slowly and the company has not yet established the amount of its loss. Manila Electric Company is now in full possession of its properties and furnishing electric and transportation service; on the basis of incomplete information, income of the Philippine subsidiaries on an annual basis may now be substantial, though it is uncertain how long before it can be brought back to prewar levels. Associated Electric Company (not included in the GPU statement) may also benefit by the proposed merger of Pennsylvania Edison Company into Pennsylvania Electric Company. It is also planned to reduce the outstanding preferred stock of Jersey City P. & L. (controlled by GPU) to \$12,500,000, and to refund the balance. However, since the regulatory Commissions have not yet approved these transactions, Mr. Tegen hesitated to indicate how much improvement would result from the mergers.

General Public Utilities is currently selling at 191/2 on the Stock Exchange, the range since it was listed being 22 1/8 - 18 7/8. The stock currently is selling at 13.2 times the share earnings as estimated by Mr. Tegen (which does not include the equity in Associated Electric). This ratio compares with some other holding company

stocks as follows:

American Light & Traction__ 16.7 Columbia Gas & Electric ___ 24.0 Electric Power & Light ____ 14.0 Engineers Public Service____ Middle West Corp.____ 20.0 National Power & Light____ 16.4 North American Co.____ 18.5 Philadelphia Co.____ 17.0 United Light & Railways ____ 15.4

Some of the above systems may effect substantial savings in federal taxes this year (although part or all of such savings might be lost in tax reductions). General (Continued on page 1115)

By ROGER W. BABSON

Mr. Babson, Asserting That Though Congress Cannot Prevent Strikes, Holds That They Can Be Made Less Serious. Opposes Compulsory Arbitration in Competitive Industries. Advocates Applying Same Laws and Rules to Both Corporations and Unions And Holds It Is a Mistake to Have Wages and Prices Fixed by Different Authorities. Sees Need of Shareholders Choosing Efficient and Competent Corporation Officials.

Having served in Washington as Assistant Secretary of Labor during World War I and later as Director-General of Information and

to certain

notes which I

Education, are coming to me asking as to what can be done to prevent strikes. I am replying "Nothing can prevent strikes, but Congress can do something to make them less serious.' Upon refer. ring to certain

made at the close of World War I, I find the

following conclusions. They are 100% equally true today, at the close of World War II.

Compulsory Arbitration

the case of railroads, public utili-

ties, and other monopolistic enter-

prises, is both impractical and unjust. To talk compulsory arbitra-

tion for competitive industry is foolish. It, however, is practical

in the case of non-competitive and

monopolistic enterprises. Honest

collective bargaining should be

encouraged in all cases; but it

must be on the basis of supply and

demand for labor in a free and non-controlled market. But even

this leads to a discussion of the

justice of inheritance and whether

we can have truly "free-enter-prise" along with the inheritance

should materially be strengthened

and their use encouraged. These

boards should consist of three

prominent men all of whom have

the public's respect—one selected

by the unions, one by the com-

panies, and one by them jointly

These men should be given suf-

ficient funds to secure all neces-

sary information within a reason-

able time and both sides should

agree in advance to accept their

decisions as final. It may be pos-

Same Rules Should Apply to All

should equally be subject to the

same anti-trust laws and the same

corporation laws which have come

to be recognized as standard prac-

tices. In this connection, both la-

bor and management should have

Both the unions and companies

should gradually consolidate their

mediation boards

of property. Voluntary

ing a decision.

Compulsory arbitration, ecept in

Roger W. Babson

many letters than independent companies. This is the English custom and should be adopted in the United States.

It is a mistake for President Truman to get mixed up either with rates of wages or prices of goods. As to inflation—following World War I we suffered from inflation but very little was done to pre-vent it. We have taken a great step forward in these past twenty years in recognizing both the advantages and dangers of inflation. Too much inflation should be fought like a prairie fire; but some inflation now must be necessary in view of our tremendous war debt. Certainly, wages and prices should be considered by the same mediation boards if prices are to be fixed for more than a short, temporary period.

Corporation Officials Versus Labor Leaders

Letters are coming to me asking if the corporations have as good leadership as the big unions? Many investors feel that too many corporation officials have inherited their jobs, while most union leaders have fought their way to the top through sheer ability. These investors would not object to paying large salaries to the heads of their companies provided they have the needed ability. Too many stockholders now seem to be losing faith in the ability of these company officials whom they mechanically re-elect every year by blindly signing absentee proxies.

sible to have union-company agreements for "cooling off" pe-Lee to Head Dept. at riods during the limited time that these mediation boards are reach-N. Y. Gurb Exchange

H. Vernon Lee, Jr., who was recently released from active service as a Captain in the United States Army, has become associated with the New York Curb Exchange, where he will be in charge of the Public Relations Department.

For ten years prior to entering an equal right to press their views the service, Mr. Lee was with Alto one another and to the public, bert Frank-Guenther Law, Inc., national advertising agency. He operations so that the industry as was graduated from Princeton a whole will be negotiating rather University in 1931.

It is surely up to the stockholders of corporations to get as loyal and able leaders as the union membership gets. Moreover, stock-holders must some day insist that their directors and officials get results for them in the form of larger dividends when, as and if the labor leaders get more for their union memberships Stockholders will some day insist upon anual physical examinations and audits concerning the health of company directors and officials the same as they now have annual financial audits

Solving the Labor Problem Lower Treasury Rates **And Bank Earnings**

M. A. Schapiro Warns That a Policy to Convert Maturing Government Bonds into 7/8% Treasury Certificates Will Cause Loss of 36% in Bank Profits

If the Treasury continues to offer %% Treasury Certificates in exchange for maturing Government obligations in the face of rising Federal Reserve Board.

operating costs, earnings of small " y affected, M. A. Schapiro, of M A. Schapiro & Co., Inc., specialists in bank securities, told the meeting of the New York City Hotel Pennsylvania.

Mr. Schapiro estimated that a rise of 10% in operating costs current operating earnings after taxes of \$200 million for member banks of the Federal Reserve System, if this occurred in conjunction with replacement of present Government securities with 1/8 % certificates.

In 1945, Mr. Schapiro estimated all member banks of the Reserve System had aggregate net current operating earnings after taxes of some \$555 million, as compared with \$562 million in 1944. Assuming a refunding of all U.S. Gov- hold.

commercial banks will be serious- ernment obligations held by these banks into %% Treasury Certificates, as well as a 10% increase in operating costs, 1946 net curmeeting of the New York City rent operating earnings, after Bank Comptrollers and Auditors taxes, would drop to \$355 million. Conference held on Feb. 19 at the or 36%, if no other factors changed.

Pointing out that the Treasury is apparently less concerned with would produce a decline in net the investment problems of the commercial banks than it is with similar problems faced by savings banks and life insurance companies, Mr. Shapiro suggested that comptrollers and auditors call to the attention of bank manage-ments and stockholders the serious threat to bank earnings which would result, if the Treasury continues to offer 1/8 % Treasury Certificates to commercia banks in exchange for maturing Government obligations they now

Taft, and Democrats against, Senator James W. Huffman, also of Ohio. In an attempt to block Mr. Allen's confirmation, Senator Taff also expressed his disapproval of two other Truman nominees before Senate Committees, viz.: Edwin W. Pauley to be Undersecretary of the Navy, and Com. James Vardaman to membership on the

The Senate Banking Committee after a two-hour hearing on Feb. 7, voted on Feb. 8 approval of the nomination of Mr. Allen to be a director of the RFC. Three Republicans joined eleven Democrats on the Committee in voting favorably for Mr. Allen, a Washington insurance man and, according to the Associated Press, a confidential adviser to President Tru-

SCHENLEY DISTILLERS CORPORATION

NOTE-From time to time, in this space, there will appear an advertisement which we hope will be of interest to our fellow Americans. This is number 115 of a series. SCHENLEY DISTILLERS CORP.

Just Thinking

By MARK MERIT

Whenever we make a pilgrimage to California, we're constantly reminded that one meets such nice people in the lounge cars of our fine transcontinental trains; that is-if you like people-which we happen to do.

We've just returned from the Pacific Coast. We like that salubrious climate out there, but we're always glad to come back home.

Well, anyway, we met a gentleman in the lounge car. He was once a fine polo player and an important financier in New York, but is now retired and living in California. He does, however, make occasional business trips to New York, since he is still Chairman of the Board of an important company. We were having a cocktail, to whet our appetites for a splendid dinner. We didn't know each other's name at the time, but the conviviality of enjoying a drink together created the sort of friendliness which, somehow or other, usually dispels diffidence in men; brings them closer together.

It occurred to us then, and it occurs to us now, that important conferences among the leaders of our present day world are usually made more friendly when the conferees clink glasses together in a preliminary gesture which is understood in any language.

And we're inclined to believe that in matters controversial, between individuals or between nations, the start of a discussion is as important as the finish.

And speaking of a friendly drink or two, we're reminded that all we have to do is just put two little letters—ab—as a prefix, before the word "use", and we have the word "abuse".

No one is in favor of abuse; surely not the distillers, nor the vast majority of American voters who, fed up with the lawlessness during the era of Prohibition which did not prohibit, brought back the production and sale of alcoholic beverages on a lawful basis.

The point? Just thinking.

FREE - Send a postcard or letter to MARK MERIT OF SCHENLEY DISTILLERS CORP., 350 Fifth Ave., N.Y.1, N.Y., and you will receive a booklet containing reprints of earlier articles on various subjects in this series.

Record Attendance Assured at Anniversary Dinner of New York Security Dealers Association

Over 1,200 reservations have been made for the Twentieth Anniversary Dinner of the New York Security Dealers Association to be held in the Grand Ballroom of the Waldorf-Astoria Hotel on Friday, March 8, 1946. There is every indication that this dinner will be the most successful affair to be held by the association.

Many innovations will be introduced this year for the entertain-

ment of those present.

Reservations have been made by many cut-of-town groups including Chicago, St. Louis, Philadelphia, Boston, Pittsburgh, and Cincinnati, and many leaders of government, finance and industry

J. Arthur Warner of J. Arthur Warner & Co. is chairman of the committee having charge of the dinner.

Confer on Plans For Expansion of **Mid-West Markets**

CHICAGO, ILL. - Ralph W. Davis, Chairman of the Board of Governors of the Chicago Stock Exchange, in Milwaukee to confer with the city's financial leaders alysis of current situation and on post-war plans for the expan-prospects for 1946—Comstock & sion of middlewestern financial

> "Middlewestern banks and financial houses must combine their efforts to hold and expand the place they have won during the war. Milwaukee, for example, is probably industrialized to the highest percentage of population of any city in the Middle West.

> "When I speak of the Middle West," Mr. Davis continued, "I mean from Pittsburgh to Denver and from Duluth to New Orleans. The development of air travel, the teletype, and direct wires has placed the cities in this territory in each others' front yards.

> "We of the Chicago Stock Exchange are very much interested in the growth of markets for capital and securities in the Middle West, and it is our objective to further this 'doing business at

"The expansion of bank loans, origination of new underwritings, and the development of both overhe-counter and listed markets are definitely to the interest of every-body in the Middle West."

N. Y. Chamber to Burn Mtg. at Anniversary

The 177th anniversary dinner Chamber of Commerci the State of New York to be held in the grand ballroom of the Waldorf Astoria Hotel on Mar. 5 will be climaxed by the burning of the \$400,000 mortgage which has encumbered the Chamber property at 65 Liberty Street for many years. Leroy A. Lincoln, President, under whose leadership the money to pay off the mortgage was raised, will apply the match to the document.

The dinner will be unusual in that there will be no speaker nor speakers' table. Instead, a pageant depicting notable events in the history of the city, State and na-tion with which the Chamber was concerned from the time of its founding in Colonial days will be presented for the entertainment of the diners. It will be the first time that the nation's oldest Chamber Also available is a report on of Commerce has had no speaker at an annual banquet.

Sports Products, Inc. — Memocandum — Cruttenden & Co., 209

NSTA Notes

SECURITY TRADERS ASSOCIATION OF NEW YORK

The Annual Dinner of the Security Traders Association of New York will be held at the Waldorf-Astoria Hotel on Friday evening, April 26. All indications point to a very large attendance, and the Committee has had many requests for tables already. Reservations may be made with any member of the Arrangements Committee.

Our Reporter's Report

Maybe it's hard to believe, but there are some people in the Street who are actually given to cheering the thorough-going correction which has overtaken the equity market.

It certainly means that there may be a slowing down, temporarily at least, in the landoffice business which has been going on in new equities. But the more conservative people declare that that is all to the

For several months now it has been a case of insatiable demand for anything at any price. A firm had only to be mentioned in connection with a prospective offering and its wires were burned up by potential buyers.

And as the saying goes, it fi-nally got around to the stage where as one observer tersely put it, "the bartenders were drinking their own liquor." In other words people in the business were being carried along with the tide.

Far from being discouraged with the probable effects of the severe reaction (it has carried the industrials down, as measured by the most popular average, for a loss of 22 points from the early February high), they regard it as a blessing in disguise.

They are hopeful that out of it will come a swing away from the mob psychology and a return to reality on the part of people with money to invest. The idea seems to be that from here in people with funds will display a bit more selectivity.

Awaiting the Gun

With the outlook promising prevailing interest and yield rates will hold for a considerable period; banking firms are looking forward to a revival of refinancing operations by some railroads and public utility companies.

Union Pacific Railroad came definitely into the field as a prospective new issuer this week when the road filed with the Interstate Commerce Commission for authority to sell \$81,662,000 of new refunding mortgage series C bonds.

Proceeds would be used to refinance an outstanding issue of series B bonds, and it is expected that at least two large syndicates will be toeing the line when the time comes for the opening of

Big Utility Issue Likely

At least one large public utility company shapes up as a likely issuer in the relatively near future, judging by reported formainvestment 10 groups to bid on a potential Illinois Power Co. loan.

This company is planning for 000 of outstanding first mort- sociated with Baker & Co.

gage and collateral trust 4s, due

That issue was sold directly by the company to a group of institutional investors just about two rears ago, and it is now expected that the company will go into registration with the SEC for a new refunding issue in the near future, possibly today.

Looking Ahead

Scranton-Spring Brook Water Service Co.'s \$23,500,000 of new first mortgage bonds, due 1976, along with 100,000 shares of new \$100 par cumulative preferred stock, now looks like one of the largest undertakings likely to reach bidding stage early in

The opening of bids is tentatively set for the 12th, though the actual date could naturally be affected somewhat by prevailing market conditions. Several groups will be seeking this deal when bids are opened.

Proceeds with treasury cash and a \$2,000,000 bank loan will be used to retire outstanding bonds.

Montreal Rejects Bids

Decision of the City of Montreal to defer its projected financing, involving refunding of \$85,980,000 of outstanding bonds, came after a second bid had been received topping the original tender of a New York group by a wide mar-

Cleveland bankers, who offered to pay almost \$1.50 a hundred more for the new issue advised the municipality to call for competitive bids, and urged that the offering be made in blocks of no more than \$50,000,-000 to facilitate the handling of the issue.

While the financing has not been abandoned, it appears that it probably will go over for some little time in order that the whole situation may be resurveyed.

Martin Judge Jr. Is **Opening Own Office**

Ohio Municipal Comment

By J. AUSTIN WHITE

The stock market decline on Tuesday and Wednesday of last week may well serve to focus attention upon the important bearing which confidence in the future of business now has upon bond prices as well as stock prices—upon prices for long term Government, municipal and corporate bonds. It may not be important that the drop on Tuesday was the largest for a single day since the spring of 1940. wneno

Germany in-**Low Countries** and caused a widespread Axis nations were soon to win the war. It may not matter much that the declines of Tues-Wednesday wiped out about 35% of the rise in the market since August, 1945

J. Austin White In fact, the entire action of the stock market last week may not, itself, be worthy of any attention. However, it does seem worthwhile to consider the im-

prices of that intangible factor of confidence.

Confidence in Money Rate Structure It seems obvious that there is a

portance to present day bond

widespread feeling of confidence that money rates will not rise in the very near future, at least. Indeed the only fear one hears today is that rates will go even lower. There is an amazingly widespread willingness among bond buyers to take longer and longer maturities. The market for longest term Treasury, municipal and corporate bonds has risen steadily for weeks (for months in the case of municipals). The ease with which investors are buying these longer and longer maturities at lower and lower yields is, of course, due to the general belief that money rates, if they change

There is a desire to get the higher income available on longer maturities, even though it may be only slightly higher than the income obtainable on short maturities. Yet the implimentation of this desire is based upon a general feeling that the bond market is not likely to go lower, and, therefore, one may as well get the higher yield on the longer commitments.

at all, are likely to go lower.

Confidence in Municipal Credit Generally

In the municipal field there is also a widespread confidence in the ability of municipalities to meet their obligations. There is little, if any, thought of the possibility of defaults. It is little short of amazing to note the abandon with which people today buy municipal bonds that some 10 or 12 years ago may have been in default for a year fidence" (we are many times tempted to call it recklessness) in the credit of practically all municipalities is based upon a real confidence that the nation will not again suffer such a terrible debacle as the Great Depression of the Thirties.

Confidence in Business Conditions

There is a widespread feeling of confidence that business conditions in general will be active and "good" for some time yet, the estimates usually ranging from around a couple of years upward Coupled with this confidence is a general feeling of economic security. No one appears to be concerned today about unemployment problems, relief expenditures, salary or wage reductions or selling merchandise that is · (Continued on page 1117) Building.

Ohio Brevities

Coincident with the announcement that the City of Montreal had rejected the offers made by an American and a Canadian syndicate for respective portions of a \$156,480,000 refunding bond issue, it was disclosed that another group, headed by Otis & Co., of Cleveland, subsequently had offered to pay a price of 98.75 for the \$85,-980,000 portion of the undertaking that was intended for placement

in the United States. The offer, however, was contingent on the he Halsey, Stuart-Otis & Co approval of the Securities and Ex- group which won the \$50,000.000 change Commission by Feb. 27. the next interest payment on the mortgage series F bonds, due 1996, on a bid of 99.52 for 23/4s. The outstanding bonds, and therefor. did not allow sufficient time for oonds were reoffered at 100. the city to act on the bid.

The Otis & Co. group's tender of 98.75 contrasted with that of 97.2955 named by the syndicate which was originally scheduled to handle the United States underwriting.

In making the offer, Cyrus W. Eaton, head of the Cleveland investment banking house, is said to have advised Montreal officials that an even higher price could be obtained were the city to offer bonds via sealed bids. It was further suggested that the amount to be sold at one time in both the U.S. and Canadian markets be limited to \$50,000,000.

Otis & Co., and Halsey, Stuart & Co., it is recalled, have spearheaded the drive in recent years for extension of the competitive bidding principle to corporate financing undertakings in the United States. The Cleveland firm, according to report, was the principal underwriter of nearly \$2,000,000,000 in new issue offerings during 1945.

A syndicate headed by Wm. J Mericka & Co. of Cleveland, was awarded \$610,000 unlimited tax sewer bonds of the City of Lorain Ohio on a bid of 100.56 for 1s.

The bonds, maturing from 1947 to 1961, were reoffered to yield from .45 to .95%.

In the group with Mericka & Co. were Fox, Reusch & Co. or Cincinnati, Commerce Union Bank of Nashville, Tenn., and Mc-Donald, Moore & Co. of Detroit.

The second bid of 100.38, also for 1s, was submitted by Harris Savings & Trust Bank.

Four Cleveland houses were in

Bank and Insurance Stocks

By E. A. VAN DEUSEN

This Week — Insurance Stocks

The 1945 report to stockholders of Security Insurance Company of New Haven has been received recently. This company was established in Connecticut in 1841 as a mutual, but became a stock company in 1873. It heads a fleet of three carriers, the other two being East and West Insurance Co. and Connecticut Indemnity Company.

The insurance business written by the three companies in 1945 reached a new all time peak, and compares with 1944 as follows:

| | 1944 | 1945 | Increa | se |
|-----------------------------|--------------------------|--------------------------|------------------------|-------|
| Fire, Marine & Allied Lines | \$7,709,562 1,785,178 | \$8,831,365 2,02J,465 | \$1,121,803 244,287 | 14.6% |
| Total | \$9,494,740 | \$10,860,830 | \$1,366,090 | 14.4% |

Operating results in 1945 for the parent company improved over the previous year, though the heavy fire losses sustained in 1945 caused an underwriting loss. Comparative figures for 1944 and 1945 are given in the accompanying table. These figures, however, are as presented to the stockholders, and will not entirely agree with figures later pubilshed as filed with New York and other states as per "convention" statements.

| Statutory Underwriting LossPremium Reserve Equity | 1944 \$192,855 163,526 | 1945 —\$230,154 218,674 |
|---|------------------------------|-------------------------------|
| Net Adj. Underwriting Loss | - \$29,329 419,270 | - \$11,480 427,293 |
| Per Share (250,000) | \$389,941 \$1.56 1.40 | \$415,813 \$1.67 1.40 |

Surplus, unearned premium reserves and liquidating value of the parent company, as of Dec. 31, 1945, are substantially above 1944 year-end values, as follows:

| Item— | Dec. 31, 1944 | Dec. 31, 1945 | Increase |
|---------------------------|---------------|---------------|----------|
| Unearned Premium Reserves | \$6,432,880 | \$6,979,565 | 8.5% |
| Conflagration Reserve | | 1,501,461 | |
| Surplus | 5.000,000 | 6,000,000 | 14.1 |
| Capital | 2,500,000 | 2,500.000 | |
| Liquidating Value | 11,647,557 | 12,793,286 | |
| Per Share | \$46.59 | \$51.18 | 5.5 |

Reports of the fire insurance companies for 1945 are being re- | Fire, Equitable F. & M., Manufacceived rather slowly this year, for some unexplained reason. However, it is of interest to quote Best's Bulletin Service, dated Feb. 25, 1946, as follows:-"The first 26 stock fire companies to file statements show an increase of approximately 10% in net premiums written, unearned premiums, admitted assets and policyholders' surplus. The incurred loss ratio rose just over one point to 57.8%, while expenses were down less than one point to 42.7%, bringing the combined loss and expense ratio to 100.5% as against 99.9% in 1944. Only two companies failed to report an increase in premium production. Ten experienced an improvement in underwriting results.

It may be of interest to state that these 10 companies accordto Best's tabulation are:-Aetna Insurance, Central Surety Fire, Charter Oak, Connecticut

turer's Fire, Phoenix Insurance, Piedmont Fire, State Farm and World Fire & Marine. It will be noted that neither Continental nor Fidelity-Phenix are included, although their underwriting results from 1945 improved over 1944, as shown in this column on Jan. 31, 1946. The reason for their exclusion from Best's current bulletin is that their convention statements have not yet been filed, the only figures available being those reported to stockholders.

Fire losses show no indication of reversing their trend as yet: January losses, as estimated and reported by the National Board of Fire Underwriters, amounted to \$49,808,000, an increase of \$4,943,-000 or 11%, over January, 1945, and of \$320,000 over December, 1945. 'This latter relation is unusual for in the majority of years December is the month of maximum losses. Over the past 10 years, only in 1940 and 1942 were

Monetary Committee Elects Officials

The office of the Economists' National Committee on Monetary Policy, 1 Madison Avenue, New York City, announced the list of officers elected for the current year:

Leonard P. Ayres

Dr. Walter E. Spahr J. W. Bell

Edward A. Moree

W. W. Cumberland

President: Dr. Leonard P. Ayres (Brig. Gen., retired), Vice-President, The Cleveland Trust Company.

Executive Vice President and Treasurer: Dr. Walter E. Spahr, Professor of Economics, New York University.

Vice Presidents: Dr. James Washington Bell, Professor of Economics, Northwestern University, Secretary, American Economic Association; Dr. Neil Carothers, Professor of Economics and Dean, Lehigh University.

Assistant Treasurer: Dr. William W. Cumberland, Ladenburg Thalmann & Co., New York, N. Y.
In addition to the officers, who are members of the Committee,

Edward A. Moree, Vice-President of the Transportation Association of America, continues as Committee assistant and consultant.

This Committee was organized in November, 1933. The President preceding Dr. Ayres was the late Dr. Edwin W. Kemmerer, of Princeton University.

losses in January higher than in the preceding month of Decem-

Marketwise, fire insurance stocks this year have been acting very well, up to the recent market reaction. From Jan. 2 to Feb. 6, 1946 they appreciated 8.7%, as measured by Standard & Poor's weekly index, compared with 7.2% for the Dow Jones Industrials. This represents a 21% better gain. It will be interesting to watch their comparative performance when the market resumes its upward primary trend. Since 1918 leading fire insurance stocks have proven remarkably good longterm market performers.

THE TASK OF INSURANCE

THERE is little difference between the tasks and the oppor-L tunities of insurance. Keeping pace with progress is an old story to "the industry that protects other industries." Along with the bright promises of modern science, many new and unlooked for hazards will doubtless develop, but science itself has been a potent tool used by property insurance underwriters and the various agencies of public safety.

It seems to me that the accomplishments of American idealism are very closely related to the accomplishments of American business. If that is so there is little to fear in the future if we maintain the same qualities to which our organization was dedicated ninety-three years ago. Any improvements in operating methods which may be required for the good of public service should be welcomed. Providing financial protection to meet the exact requirements of the insuring public must remain foremost in our endeavors.

People of the fire insurance business and of our own organization can look with pride upon the achievements of 1945, the Year of Victory. In common with every American citizen and every American business they were a part of the solid home front behind our victorious fighting men.

This report on the affairs of the company reflects the progress made in a year of national transition from war to peace.

Business Success Is Not Easy

Using the latest figures available on United States Treasury Income Tax Returns, Keystone Co. presents a chart in the current issue of Keynotes showing corporations reporting net income and those reporting no net income for each year from 1929 to 1942, inclusive.

The picture is startling. The number of profitable companies exceeds the non-profitable companies in only three of this 14- versification and (3) experienced "In 1937," states vear period. "which is generally Keynotes. considered a year of good business, six out of ten companies had no net income. Even in 1929, a boom year, four out of ten corporations had no profits.

The report concludes that although business volume promises to be high for several years to come, there will be a heavy percentage of corporations which will lose money.

"Successful investment, therefore, will continue to require (1) careful selection, (2) adequate di-

supervision.

American Foreign Investing Corp.

The 12th Annual Report of American Foreign Investing Corp. for the year ended Dec. 31, 1945 is at hand. During the past five years asset value per share in-creased \$5.58 after payment of dividends of \$8.925 or a total of

In his letter to stockholders, Robert S. Byfield, President, stated that "should the proposed loan to Great Britain be consummated, an impetus will be given to the gradual resumption of world trade. Through continuous research your management is seeking investment opportunities which may present themselves as a result of this economic activity. It seems possible that there may be more profitable investments in securities of corporations, both domestic and foreign, whose prosperity may be augmented by the reestablishment of world trade rather than in bonds and other securities of foreign governments and municipalities.

Reduction in Sales Load

.The. George Putnam Fund has announced a change in the schedule of sales loads applying to all sales of shares of the Fund effective Feb. 15, 1946. This is the schedule as it now stands: On single sales of less than \$25,000 the gross sales load is 7% of offering price; on single sales of \$25,000 but less than \$50,000 the gross sales load is 5% of offering price; on single sales of \$50,000 or more the gross sales load is 4% of offering price.

27 Years and "The Averages"

THE LORD-ABBETT GROUP

OF INVESTING COMPANIES

Calvin Bullock's current Bulletin is devoted to a summary of the Dow-Jones Industrial Average for this timely piece:

the 27 years beginning Dec. 31, 1918 to date. Here are some of the interesting points made:

On Dec. 31, 1918, the Dow-Jones Industrial Average (adjusted for changes made in September, 1916) stood at a level 50.2% higher than that prevailing on Dec. 12, 1941, the date on which the New York Stock Exchange reopened following the outbreak of World War I in July of that year.

On Dec. 31, 1945, this Average stood at a level 43.52% higher than that prevailing on Aug. 31, 1939, the date of the outbreak of World War II.

The group of common stocks comprising this Average consists today of the stocks of 30 leading corporations selected as currently representative.

In the 27 years under review over 80 changes have been made in this list of stocks in order to maintain the basic representative value of this index.

states the following:

"Having widely diversified investments in securities of leading companies in the country's basic enterprises, and enjoying supervision by an experienced research organization, Dividend Shares, Inc.

affords investors a medium of participation in a selected cross section of the stock market.

Competent Investment Management

In the current issue of National Notes. National Securities & Research Corp. uses a chart to illustrate the 1945 percentage gain in three of the National sponsored funds as compared with that of the Dow-Jones Industrial Average.

Low Priced Common Series outperformed all in the group with an increase of 66.59%, which more than doubled the 31.04% increase of the Dow-Jones Average Industrial Stocks Series and First Mutual Trust Fund showed increases of 49.27% and 44.66%, respectively.

Inflation or Deflation?

British Government's Dilemma

(Continued from first page) rations assumed first place among fication of the loan. topics of conversation and in Parmuch was said about crop failures, inadequate Government measures to increase home production, and mistaken methods of publicity, the discussion led back every time to the question of Britain's dollar position. As Mr. Dalton declared during the food debate in the House of Commons, it is longer shipping that is the bottleneck, but foreign exchange.

Most speakers during the debate made reference to the uncertainty of the ratification of the loan. Both the Minister of Food and the Chancellor of the Exchequer uttered warnings that in case of non-ratification it would be necessary to cut down imports and rations. But both of them carefully avoided to specify the measures that are planned for that eventuality. As Mr. Dalton said, the Government has to speak with reserve on this subject, owing to the impending debates on it in

A few days earlier it looked as though those Ministers who are in favor of taking a firm line would have their way. Well-informed reports in the press foreshadowed early decisions about cuts in the import of American films and tobacco, and paractically the whole Press demanded such cuts in order to make more dollars available tor dried eggs and other essential food imports. It looked as though the Government would yield to pressure and to kill two birds with one stone by taking steps that would make American opinion realize the grave consequences of nonratification or delay in ratifica-

The Dilemma

The British Government is indeed confronted with a particularly awkward dilemma. In order to slow down the decline of its foreign exchange reserve it would be necessary to effect drastic steps, in the absence of which much-needed dollars are spent or luxuries. It is feared, however that such steps might throw the ratification of the loan into jeopary, For instance, dollars could be saved by diverting tobacco purchases from the United States to the Near East, and by importing French films instead of American. But to do so would be discrimination, and even though Britain is not yet legally bound by the terms of the Washington Agreement, it is considered inexpedient to antagonize Congress. The amount of dollars that could be saved would only run into tens of millions, or perhaps hundreds of millions, but the amount that would be lost through ron-ratification would run into billions. So the Government reluctantly decided to continue losing smaller amounts in order to improve it chances of securing the larger

This policy is not likely to be continued indefinitely, however. It all depends on how Congress will take over the ratification. According to a pessimistic forecast, the chances of ratification before the Congressional election in November are negligible It is believed here that unless Congress passes the agreement by the end of March even those Senators and Representatives who are in favor of it would prefer to defer it until after the election. This means that unless the loan is ratified within the next few weeks hopes of its ratification this year will decl'ne here to the vanishing Government will be subject to growing pressure to reconsider its attitude.

Suggested Relief

cuts in dried egg and cooking fat temporary relief pending the rati- change resources run short there There is every reason to believe that the liamentary debates. And while British Treasury will not avail itself of the facilities provided by that institution when they become available, unless and until ratification becomes a certainty. Mr. Dalton declared on several occasions that unless the loan is ratilied Britain will have to withdraw from the Fund. Now under the 3retton Woods agreement, one of he conditions of withdrawal country's policy will aim at an would be to repay to the Fund in expansion of foreign trade or gold or convertible currencies the mount owed to it. There would be no point in securing dollars rom the fund at this stage, since hey would have to be repaid if, following on the refusal of ratification, Britain would have to withdraw from the Fund.

It is believed in London that rom the point of view of the chances of ratification it would be false move to obtain dollars rom the Fund. One of the reasons why London expects Congress to ratify the loan is the favorable attitude of Congress to-wards Bretton Woods. If Britain were to make use of the facilities of the Fund before the ratification of the loan this might convey the impression that she is now definitely wedded to the Bretton Woods scheme, ratifica-tion or not ratification. And it is feared that this would weaken the inducement for Congress to ratify the loan.

To sum up, the British Government is engaged in a large-scale gamble; it is risking to spend unnecessarily some tens or hundreds millions of dollars, in the hope o' gaining some billions. As things re at the moment this is considered a fair gamble. But if the sentiments disclosed by Congress during the early phases of the discussion of the loan should lead to the conclusion that the chances of ratification are not too good ther the Government may arrive at the conclusion that a bird in the hand is better than two in the bush.

Effects of Loan Uncertainty

The extent to which the delay in the ratification of the loan agreement, and even more the uncertainty whether or not it will eventually be ratified, hampers British reconstruction is gradually beginning to be realized. Government departments have of course been aware of it for some time. Ir almost every sphere they are hampered in their efforts to plan They are unable to take urgent decisions until it becomes clear whether and when the loar will be granted. Every now and again a Minister declares himself to be unable to answer a question addressed to him, on the ground that it depends on the loan. From such isolated answers, and from private conversations with Ministers and senior officials it is possible to piece together the picture of the general situation.

The rate of demobilization itself depends on the loan. Unless the loan is granted, and unless it is granted before Britain runs short of foreign exchange, it will be necessary to speed up demobilization, even though this may mean weakening the occupation armies beyond what the Service Chiefs declared to be the danger point. This will be necessary, partly to speed up civilian production in order to be able to export more and import less, and partly in order to save foreign exchange. According to the Chancellor of the Exchequer, the foreign exchange requirements of the occupation armies is at the rate of \$100,000,point. Should that happen, the 000 per month. To economize on this amount as a matter of deliberate policy would be extremely short-sighted, for it would mean jeopardizing security, and would It has been suggested in some in the long run necessitate spendquarters that the International ing many times more on rearma-

Monetary Fund might provide ment. But if Britain's foreign excan be no choice

The allocation of manpower raw materials, fuel, &c. between industries producing for the home markets and for exports is also largely dependent on the ratification of the loan. At this moment British industries are engaged in re-adapting themselves to peacetime requirements. In order to know what to produce it would be essential to know whether the whether, in the absence of the loan, it will have to aim at the highest possible degree of selfsufficiency. If the plans are based on the wrong assumption then a second readjustment may become necessary, involving additional capital expenditure and delay, which Britain can ill afford just now.

The exporting industries themselves are in the dark whether they should concentrate on Sterling Area markets or on other markets. It all depends on the loan. The requirements of bilateral trade and of regional trade are different from those of multilateral trade, and exporters have situation. no means of knowing for which to prepare.

Agricultural policy, too, is in

the loan is rejected the Govern- in the ratification, and through ment would restore the costly the realization of the difficulties subsidies in order to increase acreage to the utmost limit of possibility, and to induce farmers to produce the right kinds of crops. As it is, the measures are delayed so long as there is a hope of obtaining the loan within a reasonable time.

The drafting of the budget for 1945-46, which will have to be completed within the next six weeks or so, is no easy matter. Treasury does not know whether to budget for tobacco duties at the present rate, or whether it should allow for a substantial reduction as a result of the necessity of cutting tobacco imports in the absence of the loan. Other revenue and expenditure items are also bound to be affected.

Most Government Departments affected by the delay have resorted to a dual system of planning. They elaborate Plan "A' based on the assumption that the loan will be granted, and Plan "B" based on the assumption that it will not be granted. This entails of course much additional work to the grossly overworked officials, especially since Plan "B" has to be adjusted constantly as a result of the ever-changing

The idea of the loan was never suspense. If it were certain that ly unpopular through the delay ist state.

caused by the uncertainty. A by no means inconsiderable section of the public would actually welcome an immediate rejection which would at any rate enable the Government and the country to know where it is and to act accordingly. The Government appears to underestimate this feeling, and fails to realize the degree of willingness to make a supreme effort to enable Britain to work out her own salvation.

Left-wing circles are particularly hoping that the loan would be rejected, on the assumption that this would lead to a complete reorientation of British foreign policy. Since in the absence of foreign exchange resources Britain would not be in a position to maintain on the continent sufficient forces to prevent a general Leftward swing of the countries of Central and Western Europe, there is a possibility that in the circumstances the Government would acknowledge Russian supremacy on the continent and would seek to come to terms with the Soviet Government. This would be all the more likely as the measures to achieve self-sufficiency would lead to a high degree of economic control on Socialist lines, and would therevery popular among the British fore bring the British economic public; it is becoming increasing- system nearer to that of a Social-

THE JOURNAL OF COMMERCE now publishes every business day (except Saturday) a full page devoted to quotations and news of Unlisted Securities-the most complete daily compilation of its kind ever available. This new feature meets a long unfilled need of banks, investment dealers and private investors. Railroad Securities

There has been a wide divergence of opinion among students of railroad securities as to the probable trend of security prices over the next few months. As to the longer term prospects there is at least a fair degree of unanimity on the bullish side. There is every evidence of an industrial boom lasting a number of years, and of sufficient breadth to assure the railroads as a whole of record peace time

traffic and revenue levels. There rates to offset at least in part the increased costs that have already been assumed and the further rise in wages looked for over the next few months. Under such conditions there appears to be little gestion but that at least the vast majority of roads will be able to report earnings sufficiently high to support considerably higher stock prices than those recently prevailing.

While the general outlook for the next few years is viewed as highly favorable there are a num-

general confidence that the | ber of important uncertainties in railroads will be given increased the shorter term picture. Traditionally railroads are slow bring expenses under control during an interval of falling traffic. There is ample evidence that this pattern will be maintained in the present instance. In fact it has already been demonstrated. Particularly in the case of transportation costs, economies in the closing months of 1945 fell rapidly behind the pace of traffic and revenue declines. Moreover, a certain amount of deferred maintenace has been built up and as the railroads generally are liberally supplied with cash there will be little incentive to curtail budgets sharply just because of the rela-

tively modest drop in traffic. In the post-war period to date the actual decline in railroad earnings has been more or less ob-scured by external distortions. The chief of these have been the charging off at an accelerated pace of amortization of defense projects and income tax adjustments. The I.C.C. has ruled that any railroad wishing to take advantage of the acceleration had to put the entire charge through the income account in the last four months of the year 1945. There has been a tendency on the part of many speculators and investors to disregard reported earnings, therefore, and assume that the entire decline in earndistortions of extraordinary

Now that a new year has begun the equities.

there will not be the factor of extraordinary charges with which to excuse the drop in earnings if the decline continues. That the declining trend of earnings before Federal income taxes will continue seems fairly certain, particularly in the light of the disruption of reconversion programs by continued industrial strife. The other unfavorable aspect in the near term railroad picture is the impending wage increase. With respect to most of the unions the question is now in arbitration with the decision to be binding on both parties. It is natural to expect that the eventual award will be pretty well in line with the general policies of the Administration in recent wage disagreements. This would indicate the likelihood of a considerably larger, increase than had originally been looked for.

Over a long period of years the railroads have displayed exceptional ability to absorb successive wage increases so that the prospective further rise is not in itself taken as too serious a threat to future earning power. Moreover, it is believed that the Interstate Commerce Commission will look kindly on an application for offsetting rate increases which will presumably be filed as soon as the wage arbitration results are known. This is not much of a help for near term earnings, however. Any wage increases granted will be retroactive to the beginning of 1946. Any sizable increase in rates will come only after lengthy hearings and the examination of voluminous evidence and statistics. Based on past history in rate cases it is difficult to see how any rate increases could be made effective at least until well along towards the end of the year. Rail earnings this year seem inevitably slated to be very substantially beings has been attributable to the low the levels of 1945 and this may have a further adverse influence on the market action of

Tax Program for A Working America

(Continued from page 1088)

had to control prices a bit. It concluded that labor ought to get a bit more money. It wasn't sure that governmental services should be cut down to peacetime dimensions. It was frightened of inflation in commodity prices, but it didn't quite want to balance the budget or to start to pay off the debt or even to convert the debt, as a businessman would, into longterm obligations. So the debt and labor policies encouraged inflationary movements much more serious than price controls retarded.

Importance of Tax System

To analyze these matters that are fundamental in fiscal policy would take more time than I have. My assignment is to sketch the tax outlook. Nevertheless, you must remember that the Federal tax system is not an independent entity. What is done about governmental expenditures and the policy about the public debt are, of course, fundamental in determining what the revenue system shall be. Again, the form and structure of the revenue system, with the high rates which must be employed, will greatly affect and may well determine the vigor and the course of American industry during the next decade.

We have finally learned, I think, that a tax system is not a simple set of spigots manipulated by Congress and the Treasury to produce the flow of revenue the Government requires. Such a metaphor does not bring out at all the tremendous effects of the Federal tax system, primarily in discouraging various forms of business activity and even of family arrangements; secondarily in encouraging some forms of activity more than others. During this last war, we developed the revenueproducing potentialities of the system practically to the full; the valves on the spigots were held practically wide open. It is very unlikely that our enterprise system could function very long or very well in times of peace, if the governmental drain from individuals and industries was to continue at anything like the same

The first step in putting the Federal revenue system on a peace footing, the Revenue Act of 1945, was excellent. For once, our accomplishments in tax legislation ran ahead of our accomplishments in other directions. First, it was wise to repeal the excess tax at once. That tax was not only a war measure, primarily designed to drain off war profits, but it operated quite unfairly as between competing businesses. It acted as a damper on new corporations and on rapidly growing your thoughtful attention. corporations. Hence, it was good statesmanship to clear the tax off pand, it must take risks. A helimination of the war.

The slight reductions in individual and corporate tax rates generally applicable were a necessary and just accompaniment of the

ment didn t think it could quite excess profits tax repealer. The get out of the way. It thought it reductions could not be great, for the Federal expenditures and debt are still tremendous. The corporate tax rate is still about three times what it was only ten years ago and more than 50% higher than it was five years ago. Individual rates, too, are far higher than they were before the war. Nevertheless, both individuals and corporations needed the bit of encouragement and incentive to produce that the transition act gave them. It was a well-timed and well-executed move.

Prior to the adoption of the 1945 Act, the tacitly understood plan was to formulate and adopt a thoroughgoing revision of the revenue laws in 1946. The Treasury and the Congressional staffs conducted many hearings and conferences looking toward the preparation of the long-awaited peacetime tax bill that could remain in effect permanently, that is, for at least two or three years. Today, the likelihood of the adoption of such a bill in 1946 seems much less than it did in 1945. It now seems likely that a revision of the excise and sales taxes will be about all the revenue revision for 1946. Nevertheless, more general tax revision must come one of these days, and we shall do well to consider what its aims and purposes should be. If we know what we want to accomplish, we have the wit to set up the specific provisions to accomplish our ends.

Has there been any great change in the fundamental aspirations we had at the end of the war? We still want active and expanding industry and full employment. We want to see produced all the good things we have been told about. We want automobiles, fast air transportation, more products of light metals, more plastics, more fresh and frozen foods. We want a high standard of living, as well as the individual liberty that has always characterized this country. Production is the main thing; industry advancing into the new fields of endeavor that wartime invention has opened up; capital and labor actively employed in turning out all the goods we want and need and have the money to pay for. If business is active, there will be full employment and there will be good incomes. But we certainly can't have good incomes, no matter what the rates of pay, unless we are producing.

Defects of Present System

The tax system cannot bring about these aspirations, but it can so operate as to hinder or defeat them. What aspects of the tax structure, over the long run, need examination? I shall not discuss the system as a whole, but merely three major items that deserve

1. If we want business to exthe books promptly ofter the ter- copter may be the commuting train of the future, or it may be a toy for the few. To find out, someone must take chances, risk capital, and produce. At present, the tax

(Continued from page 1106) system does not encourage risk capital or equity investment. Rather it encourages debt obligations. The corporation that finances with bonds or debentures has a deduction for the interest it pays. If it finances with stock, gets no deduction at all for dividends thereon. But the bondholder and the stockholder are taxed just alike on the interest or dividend return from the investment. Hence the investor is encouraged by the tax law to seek the legally more secure bond or debenture or note, rather than the legally less secure common or preferred stock. The corporation has an important tax incentive to financing by bonds or debentures or notes rather than by stock.

To put the point another way, there is a double tax on income distributed as dividends, a single tax on interest and other forms of income. Hence, if we deem it important not to discourage risk capital, we should take steps to eliminate the double tax on dividends: and thus to remove the tax subto corporations financing with debt.

Treasury officials and other tax students are pretty well agreed that the double tax should be eliminated. The disagreement is only on the best way to accomplish it. In such a case, legislation ought to follow reasonably soon. The simplest way to accomplish the desired result is to give the individual stockholder a credit for some or all of the taxes the corporation has paid on the dividends distributed to him; to treat the corporation income tax like a tax on the dividends withheld at the source.

2. Much of the business in this country is owned and operated by individuals. Corporations, however great they may be, are run by individuals too. The incentive to open up new branches or new lines, to enter new fields, to build a new plant and thereby to produce more goods and to employ more men is an individual incen-

Under the pressure of war, we have set the surtax rates so high that the individual incentive to work harder and to employ more men is pretty effectively discouraged. More than 60% (61.75%) of a man's surtax net income in the bracket next above \$32,000 goes to the Treasury; more than 70% (71.25%) of his surtax net income in the bracket next above \$50,000; and not quite 85% (84.55%) of his surtax net income in the next bracket over \$100,000. These are large incomes; but large enterprises are and must be operated by executives who receive such amounts. Whatever justification may be cited for such rates. it is clear that they discourage men from taking new risks, from expanding their activities; and encourage them to take more time off and to retire earlier. This country was not made great by men who worked short days and who took long vacations.

If we really want to encourage individuals to work, to expand their businesses, to take on more men, would it not be wise to restore to the law some form of reduction in the tax on earned in-comes generally? Would it not comes generally? also be wise to put some ceiling on the total amount of a man's earned income which must be paid in taxes, say 50%?

3. We have been told that part of the difficulty in reviving busi-ness abroad is attributable to obsolescent plants and machinery. By contrast, our own success in production has often been attributed to our willingness to install new machinery even before the old was worn out; and our willingness to spend money on re-search and experiment. In recent years, the Bureau of Internal Revenue has sought to ride depreciation allowances with a very tight rein, and to compel the capitalization of development costs when-

ever possible, rather than to permit current deductions. The taxpayer's depreciation rates, in particular, are frequently upset in favor of lower rates arrived at after prolonged debate and controversy. No doubt high tax rates, as well as the use of unskilled labor, and around-the-clock operation have all contributed to managements' desire to depreciate machinery relatively quickly. Nevertheless, no machine can be depreciated more than 100%; and taxwise, rapid depreciation has proved unprofitable to corporations in perhaps as many cases as it has proved profitable.

Since in general it is desirable to encourage management to keep plants up-to-date, could not depreciation rates and methods safely be left to management, subject to the usual check of independent auditors? Certainly the Bureau would be wise in accepting management's decisions more frequently than it does.

The items I have mentioned would produce some loss of revenue, not much, but some. Can we afford it? I believe so, for I think the over-all economic gains in greater business activity and increased employment would more than balance any loss. But a conservative and realistic Secretary of the Treasury will not readily accept my assurances, which he hears every day in support of every new proposal for tax reduction. He has before him the latest budget showing anticipated net expenditures of over \$35 billions, against net estimated receipts of \$31.5 billions. The debt is now \$275 billions. The President has made no recommendations for tax reductions. He could hardly make them, in the face of the proposed volume of expenditures.

Need of Balanced Budget

Expenditures and more particularly control over expenditures are the key to sensible fiscal policy in this country. We have not balanced the Federal budget since fiscal 1930. We have had 16 straight years of deficits and the President proposes a seventeenth. The budget has been unbalanced with expenditures of \$3.6 billions (1931); of \$8.1 billions (1937); and of \$100.4 billions in 1945. Our fiscal period is not very good. During the last 16 years, we have not paid our way no matter how low or how high governmental costs were. How, then, can the citizen have complete faith that the nation's fiscal house will be put in order; and the dollar retain its current value in terms of com-

Unless the budget can be brought down to a much lower level, say \$20 billions, the hope of substantial tax reduction is illusory. There is no real hope of substantial tax reduction with a \$25 billion Federal budget, much less with the \$35 billion budget the President has outlined. On the contrary, we must have great business activity and must continue to impose nearly all our present taxes, if the budget is to be balanced. There is very little leeway for the off year. Such a fiscal prospect is dismal for business and the citizen alike. We can avoid it only if we determine that expenditures must be brought down and kept under rigorous control; that our representatives in Congress must exercise unusual prudence and restraint in the case of the very many appealing but unnecessary proposals for expenditures which will be made to With rigorous control of them. expenditures, our fiscal house can be ordered and we can also have the tax relief which will be needed if our American way of life is to function effectively.

The major points of sound fiscal policy that I would emphasize, in conclusion, are few and simple. Vigorous private enterprise is essential to the American way of life as we have known it. A sound tax and fiscal system is essential to an active and healthy economy:

British Banking Sums Up Economic Position

(Continued from page 1090) in the case of Treasury Deposit Receipt loans-was, therefore, a serious matter for the banks, and to compensate for this reduction in income, they had in turn to lower the rates of many of the time deposits held with them by their customers.

Mr. Colin Campbell, the Chairman of National Provincial Bank who received a Peerage at the New Year-revealed that the reduction in time deposit rates only in fact offset the reduction in the rates earned by the banks on their short-term loans to the Government. He also mentioned that in spite of the war-time increase in operating costs, the community was obtaining banking services at charges no heavier than in prewar days. He alluded to the Government's efforts to reduce yields on medium and long-term securities as an interesting experiment. He hoped that the task would be successfully accomplished "with

The Federal budget should be balanced in a year of normal business activity. The key to a balanced budget is careful control over expenditures. If expenditures are kept under reasonable control, taxes need not be excessive. though they will be higher than we knew in the thirties. Many more citizens will have to pay Federal taxes than paid them during the twenties and thirties, but the wartime rates can be considerably reduced if we watch expenditures. That is the essential condition to Federal fiscal health, on which our economic health so between members and only argreatly depends.

equitable treatment of the in- mutually satisfactory will become

The American Loan

The American loan was regarded by most bankers as a necessity. Mr. Beckett, the Westminister Bank Chairman, summed up the proposals as being on the right lines. Failure, he said, would have meant economic war between the dollar and sterling blocs, and we also could not have expected the sterling area countries to continue extending credit to Britain in-definitely. Mr. Beckett was also in broad agreement with the Bretton Woods Final Act. He said. with Sir John Anderson, that "it does not involve any return to the gold standard. In fact it does not involve any return to anything." It is, added Mr. Beckett, a new and original essay to solve an old and obstinate problem.

Mr. Beckett also spoke on the future of Imperial Preference, with particular reference to the forthcoming International Trade Organization meetings. He said: "There are some people who aver that under the present plans we are sounding the death knell of Imperial unity. But ties of blood and intimate long-founded trade relationships are not so easily disrupted. It is true that Imperial Preference will come up for consideration at the projected Trade Conference, with a view to its rewith other forms of trade restriction and discrimination. A process of bargaining is to be initiated rangements which are considered of economic information.

vestor," and added the warning that the pace should not be forced. leffective. No one will be expected to modify a preference or reduce a tariff except for a quid pro quo. The aim is, of course, to secure a general elimination or mitigation of the obstructionist effects of trade barriers, and if Imperial Preference makes some sacrifice in this direction, compensation should be forthcoming to the Empire and to ourselves by way of freer access to the vast American and other markets.

British Domestic Politics

As regard home political questions, most of the bankers were guarded in their utterances. They were disposed to accept the nationalization of the Bank of England as a fait accompli.

On the future of industry, Lord Linlithgow looked for growing cooperation between Government and representative organs of in-dustry, trade and finance. Mr. Colin Campbell instanced industry's need for more coal and manpower. Obstacles to reconversion should be removed, and every practicable mechanical aid to higher production and lower costs should be used.

The bankers' view is one of tempered optimism. They recognize the difficulties ahead, without surrendering their faith in Britain's powers of recovery. And if on certain points of policy they duction, but only in conjunction differ both between themselves, and even with the Government. the result is welcome, for it means an addition to the nation's fund

Coal and Wheat versus Communism and Totalitarianism. The vital problem of Europe today is the desperate need for increasing supplies of food and fuel. Cold and undernourishment is breeding desperation and political extremism. France is basically individualistic but its primary shortage of coal for fuel and power is a powerful factor in favor of increased communistic strength in the forthcoming elections. Belgium on the other : hand, better supplied with food and fuel has taken a significant

turn to the Right.

Is there any practical solution? Britain was previously an important exporter of coal to Europe but now faces the same problem of underproduction. The German mines as everywhere lack willing labor and the domestic demands of this country permit little leeway for export.

In this desperate situation Canada's unique position as one of the world's leading producers of primary goods, in conjunction with a disproportionately low domestic consumption offers some ray of hope. Alberta alone has some 17,000 square miles of coal deposits and in Northern British Columbia an excellent quality of coal is found in the form of outcrops. The same area also comprises one of the most fertile sections of the Dominion and could contribute largely in boosting the Canadian production of wheat.

Canada, despite its mere 12 million population has performed many herculean tasks and as the highest per capita exporter in the world is well fitted to meet this argent world need. If extra labor s necessary in considerable volume it will only help to solve Canada's handicap of under-population.

During the past week there was ome indication of market tiredness with Nationals showing an inclination to ease on increased Albertas and Monofferings. treals on the other hand went against the tide and registered fresh gains following the report of the rejection by the City of Montreal of the prices offered by two syndicates in this country for the proposed \$85,980,000 refunding issue.

Internal issues were weaker and there was a greater supply of funds in the free market. The recent cancellation by the Foreign Exchange Control Board of the privilege of registration of bonds ourchased in Canada for resale in Canada has given rise to some confusion in this market. It would appear that the situation is

(1) Bonds that have been imported into this country and have already been recorded by the Foreign Exchange Control Board can be sold outright in Canada and the Canadian dollar proceeds can be sold in the free market. This would also cover R. J. Edwards Opens the case where bonds have been deposit there. There is also little doubt that the registration rights are transferable

comprise the bulk of the holdings in this country can only be sold here.

two advantages over the unregis- President of the firm.

tered. It enjoys the benefit of the broad Canadian domestic market and the exchange risk is limited to the variations of the marfor free Canadian funds. There is little doubt that owing to the comparatively small volume of registered bonds in this country the pressure on the free market was considerably reduced during the recent wave of internal bond liquidation. In the event of an important selling movement it is likely that offerings of unregistered bonds will have a sympathetic influence on the registered. The establishment of a wide differential between the two categories could lead to selling of registered and the purchase of unregistered bonds.

With regard to future prospects the consolidation of the existing high level is likely to continue with no marked movement in either direction. Montreals and Albertas, however, still appear to have some scope for further im-

Canada May Give Credit To United Kingdom

The extension of a large credit to the United Kingdom will be considered at the forthcoming session of the Dominion Parlianent, scheduled to open March 14. according to the Feb. 22 business summary of the Bank of Montreal. Unofficial reports state that the proposed credit may total \$1,500,-000,000, with a part of this amount epresenting extensions of loans already made.

Meanwhile, there have been wo additions to the total foreign oans made under the Export Credits Insurance Act, the Bank reports. China has been granted a loan of \$60,000,000, to be used in 1946 and 1947, and repayable over 30 years, commencing in 1948, with interest at 3%. The Netherlands, which has already spent in Canada the \$25,000,000 credit received last May, has now been granted a further \$100,000,-000 credit to be used before May

The Bank also states:

"Under a policy described by the Prime Minister as 'the first step in a deliberate and carefully considered plan working toward the eventual removal of price and wage controls,' the Canadian Wartime Prices and Trade Board has provisionally suspended, as from Feb. 1, the price ceiling on approximately 300 non-staple goods and services, both imported and domestic. Leading merchants, it is stated, have announced their intention to cooperate in the prevention of any substantial price rise as a result of the Governnent's action.'

Our Outlook for World Trade

(Continued from page 1089)

solve our domestic problem. All trade. In some nations foreign trade is regarded as so important that it takes precedence over internal trade. Sir Stafford Cripps recently said that the English people would have to get along without new automobiles so that England would have cars to export. In a series of speeches he has stressed the necessity for continuing the "austerity standards" of war-time, and has called on the people to further tighten their belts. Exports come first in their postwar industrial program, and must be increased by at least 50% over prewar volume.

Canada is also vitally interested in foreign trade. It has built up a greater productive capacity than is required for normal peacetime home consumption. To maintain full production, full employment and high wages, it must export and do so in greater volume than ever before. Canada's position is somewhat like ours—with this difference—that its export trade is a larger percentage of her total

Underrated Importance of Exports

The part that exports play in our domestic economy is sometimes belittled by those of narrow vision who do not take the time or trouble to study the problem. It is true that exports have accounted for from 7 to 10% only of our total output of movable goods However, let us consider certain commodities as examples. We find that normally we export from 30 to over 60% of our total production of cotton. It is the principal crop in the South and Southwest It is grown on about one-fourth of the nation's farms, and more than 40% of the total farm population of the nation lives in these cotton states. More than 30% of all tobacco grown in the country is exported. Over 30% of our production of canned sardines, dried prunes, lubricating oil, refined copper and sewing machines enter export markets. There is a growing dependence of the mass production industries upon export trade, and just before the war more than 20% of various types of industrial machinery was being exported. Export trade reaches into every nook and cranny of this broad land and contributes to the economic well-being of all-industry, agriculture, transportation and distribution-rich man, poor man, beggar man, thief.

A rise in the ratio of our foreign trade to domestic trade has invariably resulted in a rise in employment and an improvement in domestic business conditions, and these trends have been downward when this ratio has fallen.

It is conservatively estimated that with a foreign trade of ten billion dollars a year—we have been doing considerable more than that for several years—and this is a conservative estimate for the future-such trade would provide about 5,000,000 jobs, and probably many more jobs indirectly dependent upon such trade. Consider the state of our prosperity when in the 30's we had from five to ten million people unemployed. What a blow it was to

world trade as one way of helping our economy. What a blow it would be to our system of domestic marthe world is interested in foreign keting and distribution if 5,000,000 or more of our workers now engaged in production based on foreign trade should become unemployed.

In the formulation of postwar policies our national government is laying great stress upon foreign trade. It looms large upon the horizon. It has been the subject of consideration in many recent international conferences. The Bretton Woods Agreement with its International Bank and Stabilization Fund is designed to furnish the stability in exchange without which world trade cannot prosper, no matter how many willing buyers and willing sellers you may have. There must be both the ability and the freedom to convert the proceeds from the sale of exports into the currency of the selling country, or foreign trade will be reduced to a bilateral bartering arrangement.

Congress has re-enacted the Reciprocal Trade Agreements Act which should permit our Government through negotiations with other nations to materially reduce the tariff and other trade barriers and restrictions that have been built up and created by so many countries in recent years.

The United Nations Organization has created as one of its coordinate branches a Social and Economic Council, designed to smooth the pathway for a greater international trade.

The World Conference on Air Transportation at Chicago was a long step in the direction of the establishment of a great system of world transportation by air. Additional and faster methods of communication between nations lead to better understanding between peoples and greater and accelerated trade. The airplane may well open up hitherto inaccessible lands and riches, create new towns and industries, introduce new commodities to the world's markets and generally quicken the flow of foreign commerce.

Leadership in rebuilding a world economy and in removing or lowering the barriers to trade is being taken by the United States. This is our responsibility because we have by far the largest industrial capacity to produce the goods which the world so urgently needs, and also the greatest purchasing power with which to buy the goods of other nations. We also must be the principal source of the investment funds required for rehabilitation, reconstruction, or for new plants or enterprises.

Leading U. S. Contributions to World Trade

The two greatest contributions that the United States can make in the near future to "Our World Trade Outlook" are these: first, restore production-produce the wealth, the goods that we so greatly need at home, and for which the whole world is in such dire need; and second, ratify the financial agreement United Kingdom which provides for a three and three-quarter billion dollar line of credit. Production is the only antidote to high prices and inflation. It is the only means whereby we may have high wages and happiness. Ratification of the British agreement would be a major step in the restoration of world commerce, and in the elimination of state direction and control of business. It will enable Britain to buy the raw materials that are so essential to the resumption of production by her factories of goods both for home use and for export. Before the war she was the world's largest customer and our largest customer. She needs food or dollars with which to buy food—until her export trade, so greatly diminshed during the war, shall have been restored. She is

temporarily embarrassed by unparalled war losses, and we can help her to regain normal commercial health. No good business man would do less for a good customer. Full employment with high wages and a rising standard of living in the United States will best be promoted by a multilateral system of world trade in which Britain is a participant. Without this credit there is danger that the world will continue its warcreated system of government controlled economic blocs with resulting economic chaos and warfare. This we should avoid at all

The Board of Directors of the Chamber of Commerce of the United States recently issued a statement urging approval of the financial agreement with Britain. The board expressed the conviction that the proposed credit and related understanding respecting commercial policies would be to the advantage of the United States, that no other program offers equal asurance of an expansion of world trade on a multilateral and non-discriminatory basis, and that the alternative is extensive and harmful economic warfare among rival groups of nations.

The United Kingdom on its part pledges removal of controls and barriers which now hinder an expansion of United States foreign trade. These pledges which are of the greatest significance include the elimination within one year of the sterling area dollar pool and an agreement that payments or transfers on permitted American imports into the United Kingdom and on other current transactions shall be free from restrictions. They agree to join with us in effecting the gradual reduction or elimination of trade preferencesincluding Empire preferences and other export and import controls. Without this credit the United Kingdom will be forced to strengthen sterling area controls and Empire tariff preferences, and all prospects disappear for putting into successful operation the International Monetary Fund and the International Bank for Reconstruction and Development.

The Department of State has prepared extensive proposals for the expansion of world trade and employment. Some fourteen countries have been invited to send delegates to Washington for a preliminary discussion of these proposals so that they may be presented to a World Conference on Trade and Employment which is scheduled to take place before the end of the year. This is a part of the program coming out of the financial agreement between the United Kingdom and the United

Must Have More Imports

In looking over your program I have noted with interest that you devote one whole afternoon to discussion of such questions as Advertising and Sales Promotion, Personnel in Distribution and Consumer Relations. I acknowledge the importance of these questions. With the scarcity in to build goods which has prevailed for America. several years, salesmanship has almost become a lost art. Goods have sold themselves. It has been essentially a seller's market and there is undoubtedly a yawning gap in your sales organization where during the war years salesmen have not been educated or developed. I think there is a great opportunity for the returning veteran to devote himself to learning salesmanship because in due course there will be high demand for his services. I do not see any reference in your program to Buyers,—I repeat Buyers. Our outlook in world trade is going to improve if the marketing and distribution agencies in America have keen and intelligent buyers. They are going to be more important in the near future in developing our World Trade than are your salesmen. The world is ready to buy our goods, but how can they Office of Inter-American Affairs

a good customer, a good neighbor, pay for them? They can only pay has estimated that Latin America for them with exports or loans. we tried the loan game after the last war with rather disastrous consequences to both the borrower and the lender, and we must move with caution in repeating that performance. The principal reason why this method failed was because the loans were generally made to Governments for purposes which in many cases were unproductive and not self-sustaining. There is a broad field for the development of foreign trade through the placement of sound private loans and the investment of private venture capital. We must be willing to receive imports, to import and prosper. How can we impoverish ourselves by taking the products of other nations, when by so doing we enable the other fellow to buy our goods and thus keep our factories going? We need trained buyers to go out into the world's marts of trade to find the goods and commodities we can use. Our exports in November 1945 increased over October by about 40%. At the same time our imports decreased by These figures tell a tragic ale of impermanence and insecurity in our foreign trade. They are too one-sided and unbalanced. Again I say we need more buyers and need them now. Buyers who can find articles of foreign pro-duction that do not compete with our own products - buyers who can create new industries in foreign lands to utilize raw materials na native labor to produce the things that we cannot economiany produce. This is one of the ways we can build up foreign

After all, the nations of the world have become highly dependent on each other, so much so that no nation can be happy and prosperous today if the other nations of the world are unproductive and bankrupt. An embargo on imports automatically operates as an embargo on exports as well: both in the long run cause trade possibilities to shrivel and factory chimneys to stop smoking. The tremendous industrial activity and high wages incident to war have incited the whole world with the praiseworthy ambition of attaining a peacetime program with a high level of production, a high level of employment and high wages. Economic welfare throughout the world depends upon the degree of fluidity of world trade Practically every nation must supply some of its commodity and service needs through resort to the resources of other nations. Production in our own industries must be supported and supplemented by imports and interna-tional trade. The rapacious consumption during the war of some of our most vital strategic materials proceeded so far towards exhaustion that the United States in the future must increasingly look to foreign sources of supply We must become an importer of many raw materials of which we have had an abundant supply in the past. Purchase of such materials is one of the most promising ways by which we may hope to build up our trade with Latin

Latin America During the war Latin America had not received an adequate supply of many of the commodities which it has been accustomed to import from abroad. These countries have established new industries and have increased home production, but largely with respect to consumers' goods. But this new production has not been sufficient to meet their needs. Their usual stocks of these goods have been depleted and their inventories are starved for replacements. It is well known that there is a large built-up demand for consumers' goods of many kinds, necessities and luxuries, which have been in short supply or nonexistent during the war.

Also they will require a large volume of heavy building supplies and machinery of all kinds.

will be in the market for about now manufacturing products for-7 billion dollars' worth of equipment for its industrial needs.

They have built up large dollar balances in the United States with which they may make purchases here. Their gold foreign exchange reserves and trade balances are estimated to be about 4 billion dollars. In reality these balances are small when due consideration is given to the enormous volume of purchases which they may wish to make and these balances may be exhausted in a very few years. They cannot be counted on as any part of a long range program of trade expansion. A more enduring program must be devised whereby these buying balances may be regularly created. We must buy more of their goods and raw materials.

Increased purchasing power in Latin America will mean increased trade between the Americas and fuller realization of our potential capacities. Thus, the interest of the Latin American countries in achieving a better balance in their economies is paralled by our interest. This country, by contributing its capital, technological skills, and equipment, can strengthen the entire fabric of inter-Americanism, and, by so doing, strengthen itself in the postwar world.

This subject of balanced economy is one of the most vital problems with which the American nations have been faced. Admittedly, the United States will no longer import such huge quantities of strategic materials as were so fortunately obtained from its good neighbors during the war. However, one of the most important trade developments to come out of the war may well prove to be the real progress which the other American nations have made in cultivating their trade with each other. This was largely because of our inability to supply their requirements.

merly imported. In the Western Hemisphere and other lands hundreds of secondary industries have sprung up. This trend shows every sign of continuing and becoming more pronounced. So far as the United States is concerned, this means fewer sales of the simpler manufactured consumer products in countries where these products are being made, but total export trade will expand and more machinery, technical and engineering supplies and other highly specialized manufactures will be shipped.

Some idea of the industrialization occurring abroad is given by the following examples-

The industrial output in the City of Sao Paulo, Brazil, doubled in the period from 1935 to 1940.

The new steel mill in Brazil at Volta Redonda will produce almost twice as much steel as produced in all of Brazil previously each year and will take care of haif of Brazil's steel requirements. Industrial production in Chile is

now 80% greater than in 1929. Argentina in 1930 imported half of her requirements in cement and produced locally the other half. By 1940, only 0.1% of her cement

requirements were imported, the rest produced locally

From a narrow point of view, this accelerated industrialization in many countries of Latin America might appear to be one point that must necessarily be at the expense of industrialized nations. like the United States, by reduc-ing demand for foreign finished products. Actually, it is likely to instability. have an opposite effect. Industrialization in Latin America is advantageous to the entire hemisphere, because industrial expansubstantially increased. Further, the history of international trade relations shows that it pays an economically strong nation to known to mankind.

Countries all over the world are | help its neighbors develop, so that they together may march along the road of economic progress

A Future Expanded World Trade

We are on the threshold of a new business era in our history. It will be characterized by an expanding world trade and by a tremendous growth in the interchange of goods and commodities between the peoples of the world.

A prosperous America with a well-developed two-way flow of foreign trade is one of the most important factors in the stabilization of the postwar world economy. Healthy world trade and the prosperity to which that trade will lead are only possible in a peaceful world.

The barriers to the free flow of world trade are very great. The removal of many of these barriers is a prerequisite in any large scale renewal of normal world trade. We are working feverishly in all kinds of conferences to bring about political collaboration for the maintenance of peace and security.

There can be no real peace or security where there is economic disorder and instability. We must, therefore, direct our earnest efforts to bringing about international economic collaboration.

We all want peace, economic security and political freedom. If all of our war personnel and war workers are to have employment, the channels of trade must be opened wide. Without trade there is unemployment. Trade, employment and prosperity are the only antidotes to social and political

We want that form of postwar trade policy which will preserve the free enterprise system which has made our country great, and sion carries with it a greater buy- has given our people the finest ing capacity by many people and most generally distributed de-whose standard of living has been gree of cultural opportunity—the greatest degree of social security and political freedom, and the highest standard of living, ever

Fiscal and Monetary Requisites For Peacetime Prosperity

(Continued from page 1086) vesiment. This caus for a prompt return to conservatism in fiscal policies, for immobilization into bond investments of some of the public's holdings of currency and bank deposits so that they will not be used to feed the fires of inflation, for deflation of the money supply to a point nearer the needs of the community for circulating media, and for the adoption of policies which will permit the banks to extend loans to business without expanding the total deposits of the banking system.

These general objectives call for three specific actions: 1. Balance the budget.

Reorganize the debt. 3. Revitalize Federal Reserve controls, each of which I shall dis-

1. Balance the Budget

An imperative first step in any program of fiscal reconversion is to balance the budget, for our public debt is already too large by any standards. While it is encouraging that some Washington officials have of late held out hope for an early balance and that one of them, Chairman Eccles of the Board of Governors of the Federal Reserve System, has taken a very strong stand on the subject, let us hope that the Congress will have the strength of purpose to hold firm against the inevitable pressures for increased outlays and will promptly eliminate all unnecessary expenditures. The recently published budget message is far from promising in its implications, not only because it fails to establish a balance between estimated revenues and estimated expenditures—the latter, incidentally, being probably un-derestimated—but also because it forecases a preposterously high minimum future budget of \$25,-000,000,000 per year.

Why a Balanced Budget Is Essential

A balanced budget is necessary not only because the debt is obviously much too high but for a number of other reasons.

1. Government securities represent so large a portion of the assets of our savings banks, commercial banks and insurance companies that the stability of the whole financial organization is now dependent on the fiscal integrity of the Government.

2. A balanced budget is necessary as insurance against inflation, for the confidence of the people in the soundness of our money is likely to be undermined

War II, the Government is unable to get its finances under control.

3. Repeated deficits are a powerful impediment to orderly private investment, for if Government policies are inflationary, business confidence tends to be undermined and capital tends to seek inflation hedges instead of job-producing investments.

4. It is necessary that the budget be balanced so that the Federal Reserve Board will be able to use its powers to prevent over-expansion of credit, instead of basing its actions almost entirely upon the necessity of protecting the market for United States Government securities.

5. A balanced budget, together with a program of debt reduction is necessary if we are to accumulate the reserves of borrowing power which the Federal Government would again need if we were experience another serious economic or military emergency.

There are thus a number of powerful reasons why we must balance the budget and make an heroic effort to reduce the debt substantially in the coming period of prosperity; certainly if we are unable to do so in such a period, then all hope of fiscal integrity is lost. But it is imperative that this be accomplished at a low rather than a high level of Government expenditures. Many estimates of post-war expendi-tures by the Federal Government assume \$30,000,000,000 per annum. I submit that expenditures of such magnitude are absolutely unnecessary and that they are incompatible with the maintenance of sound prosperity within the framework of our free enterprise system.

A Program for Reducing Expenditures

The Federal Government can limit its expenditures in the following rather obvious ways:

1. By planning military expenditures so that the country will at times be able to mobilize quickly to fight tomorrow's batwith tomorrow's weapons. We should be able to maintain a high military potential, extend our system of military education, maintain a great laboratory and experimental organization to develop the most powerful weapons and the "know-how" to use them, and have a productive plant ready to produce the mechanisms of war on short notice at an annual cost of not more than \$3,000,000,000, which, though four and one-half times our average annual expenditures for military if, after the massive deficits of purposes during the period 1925 the great depression and of World through 1937, is but a small fracpurposes during the period 1925

tion of the demands of those who those policies are continued we want to maintain a colossal and perhaps obsolete military establishment.

2. By replanning our public works program so as to eliminate all Federal public works except those which can be justified as aids to production and to defer such expenditures in good times so that they can be undertaken when business is bad.

3. By eliminating the superfluous and costly aids to agriculture. Farming has become one of the most prosperous industries in the country and it is absurd to continue the bonuses, subsidies and grants which were undertaken when agriculture was prostrate.

4. By subjecting other Government costs to a searching investigation designed to reduce expenses and eliminate duplication wherever possible without impairing essential services.

5. By liquidating the institutions of emergency credit, such as the Reconstruction Finance Corporation. It is time for the credits extended by such agencies to be repaid.

6. By deferring establishment of a "cradle to the grave" Social Security program until the nation can afford it.

If a program such as this were adopted, Government expenditures in years of good business could be brought under \$15,000,-000,000 per annum, which would enable us to reduce the tax burden on both individuals and corporations to levels considerably below those of today and still have receipts in years of good business sufficient to permit a substantial amount of debt retirement. A prompt balancing of the budget is feasible and most necessary, for it is an essential first step in any program of fiscal monetary and banking rehabilitation.

2. Reorganize the Debt

Another no less vital step, now that the war is over, is to reconvert the Government's debt management policies to the needs of peace. Present Treasury policies -and those of the Administration as well, judging from the President's budget message-are full of potential danger. They are violently inflationary, they impede the proper application of controls by the Federal Reserve System, they carry the threat of doing violent damage in the long run to the essential savings institutions of the country, they place the commercial banks under pressure to lower the quality and lengthen the maturity of their bond portfolios, they represent a rank injustice to those who have accumulated savings for the proverbial rainy day or for use in their old age, they discourage saving and encourage speculation, they represent an open invitation to trouble in case the Government needs to use its credit in a later emergency, and they flout all that history teaches as to the dangers of a large floating debt. is a strong indictment but it is, in my opinion, fully justified, and it is essential that those responsible for present policies recognize the dangers involved.

Judged by recent actions and by statements emanating from high officials of the Administration, the Treasury is apparently at present following the policy of refunding all maturing or callable issues into one-year certificates of indebtedness, and of stopping the issue of intermediate and longterm securities. The official rationalization of these policies is that they will cut the interest cost of the debt and reduce the income banks receive from interest on Government obligations. Such policies would in time have

in some detail. In the first place it is a mistake to assume, as did the President in his budget message, that present policies would simply stabil-

may well witness a lowering of the entire structure of interest rates. By refunding maturing issues into certificates, the Treasury would as time goes on force the banks to seek to replenish their earnings by buying intermediate maturities of Government securities when the supply of such issues would be contracting. The total supply of five to ten year securities, which Government represent the maturity area from which banks have derived the bulk of their interest income is now about \$35,000,000,000, and the banks have in their portfolios about \$20,000,000,000 of such securities. But if the Treasury makes no change in its offering policies, then by the end of 1947 the total of five to ten year securities available in the market will be cut to \$10,000,000,000. Treasury policies would thus shorten the supply and magnify the demand for securities of intermediate maturity-and it is likely that yields under such conditions would be under considerable pressure. The continuation of present

Treasury offering policies would also place long-term interest rates under pressure, for if no long securities are offered then the insurance companies and the savings banks, which have funds coming in for investment day by day in very large amounts, and on which they pay substantial rates of interest, will have little alternative but to bid for outstanding obligations—with consequent pressure on this section of the market. If the Treasury does not change its policies it is possible that, whereas until late in 1944 the structure of Government security yields was \% % for one year, 2% for eight to ten years, and 21/2% for 25 years, we might well have yields of 2% on the long securities and little over 1% on eight to ten year securities. And under those conditions the rate on one year certificates might be brought under such pressure that, in the absence of a revised Federal Reserve policy, it too would decline. This would be a very serious development. for the commercial banks in most communities have on deposit substantial amounts of the people's savings on which they pay rates of interest well above the present certificate rate. Furthermore. the insurance companies have contractual obligations, which require that they earn 2½% or more on most of the funds at their disposal, and if rates of Government securities drop much below that level they will be placed under the necessity of making wholly needless increases in the cost of insurance to the people.

We must keep in mind that all interest rates tend to be responsive to changes in the rates on Government securities and, therefore, if the Government persists in starving the market for intermediate and long-term bonds, the whole structure of rates to nongovernmental borrowers would tend to move lower. Rates on corporate securities, on loans to agricultural and commercial borrowers and on mortgage loans, would probably, under pressure of competition, drop materially if rates on Government securities of comparable maturity were to decline much below the already abnormally low levels.

There is a disposition to believe that interest rates can be forced lower without affecting anyone except the banks and the insurance companies. This is obviously incorrect, for if interest rates were to be forced to the levels implied in present Treasury policies commercial banks would some quite deleterious effects cies commercial banks would which I should like to deal with have to increase their service charges on deposit accounts, insurance companies would have and savings banks would have to from rising as suddenly as they

positors. We have reached the point where further reductions in interest rates are likely to be taken out of the pocket of the man in the street.

The matter does not end there. however, for banking and insurance institutions have a responsibility to their communities to maintain the essential services which they provide and many of them would be sorely tempted to try to offset the loss of earnings on high grade securities by compromising with long estab-lished quality standards in making new loans and investments. Abnormally low interest rates represent an inducement to bad banking and that, as we all know, is quite serious business, for while Government bonds may be riskless, such is not true of lower grade corporate bonds, which can and probably will decline sharply when we next experience a seri-ous depression. There is nothing more important to the future of banking than the maintenance of high quality in the portfolio.

Present Treasury debt management policies would also in time do great injustice to the savers of the country and would tend to impair the source of future capital supply. They reduce the interest income of investors when living costs are rising and they vitiate the incentive to save at a time when business needs for new capital to finance post-war prosperity promise to be unusually high.

Even more important is the fact that present Treasury policies, if long continued, would be violently inflationary, for if yields on obligations Government are forced to still lower and more unattractive levels, holders of cash, as well as present holders of Government securities coming due, will be unwilling to purchase current Treasury offerings. The debt would tend to become concentrated increasingly in the banks and this would result in continued expansion of bank credit at a time when the money supply already is greatly in excess of require-What we urgently need now are Treasury policies which will bring about a reduction instead of a further increase in bank holdings of Government securi-

From still another point of view Treasury policies are subject to severe criticism, for they contemplate a rapid increase in an already colossal floating debt. Today more than \$70,000,000,000 of marketable Government securities mature in less than a year; and if the Treasury were to refund all such securities, which mature or come up for call, into one year certificates, the marketable floating debt will amount to \$105,000,000,000 five years from now and represent 38% of the total debt. Far from increasing either the amount or proportion of the debt represented by short maturities we need to move in the other direction, for history is full of instances where nations have gotten into trouble with an floating debt. unmanageable Sound debt management requires that inducements be offered to the people to invest presently unused cash holdings in long dated securities, which would tend to immobilize some of the hot money an inheritance from the war,

Finally, the lower interest rates go, the more pressure there will be on the Federal Reserve Board to subordinate its policies to the defense of an arbitrary and abnormal yield structure on United States securities, and the more difficult it will be for the Federal Reserve to hold the line. It is not unreasonable to expect that if the Treasury takes advantage of the present situation to force rates to still lower levels than now prevail the Federal Reserve will, when loan demand revives, find it to increase the cost of insurance, impossible to prevent bond yields ize present interest rates, for if reduce the rates paid to their de- have declined. Common sense

tells us that the penalty for forcing any market too high in price by changes in rediscount rates to deliberate and at the Reserve is to run the risk of a serious decline later.

For many good reasons we need urgently to have a reorganization of debt management policies; and primarily for the purpose of focusing public attention on an issue of obvious importance, I submit the following program:

: 1. The first step in this direction should be the redesigning of Government securities to stimulate the absorbing power of the non-bank market and to take advantage of all existing non-bank demands for Treasury issues. To this end, the Treasury might well offer a long bond-with a maturity of 50 years or more-at 3%. which commercial banks should not be permitted to purchase. There must be several billions of funds which would be invested in Government securities at 3% but which the holders will prefer to hold idle at a lower rate. We need to get that money into U. S. securities so that bank holdings of such securities can be reduced.

2. It also is time to give recognition to the fact that some commercial banks are in reality savings banks in everything but name and to permit them to purchase long-term bonds with, of course, appropriate restrictions on the amounts they can own based on their time and thrift deposits. It goes without saying that the $2\frac{1}{2}\%$ rate on 20-25 year restricted issues should be maintained as an incentive to non-bank investment and the Secretary of the Treasury should announce that he will from time to time offer long or intermediate securities in amounts which the market can readily absorb without causing either a rise or de-cline from the interest rates mentioned above.

3. The time also has come to revise the savings bond program in the light of changed conditions. The incentive to buy Series E bonds, and to hold them, would be increased considerably by extending their maturity to 20 years and by continuing the 2.9% rate of return from the tenth to the twentieth year, so that individuals with savings programs and savings needs of more than ten years would not be penalized for reinvesting in savings bonds by getting no interest at all in the eleventh year. This privilege should, of course, be extended to outstanding savings bonds to encourage present holders to keep them. Along with this proposed revision might go a reduction of the annual purchase limit to \$2,in recognition of the fact that these bonds are designed for investors with moderate incomes. Series F and G bonds might well be discontinued. They served a useful purpose in war finance by attracting funds which might not otherwise have been invested in governments. Their place would be taken in the future by the proposed 3% bond, which would have a wider appeal and which would not be a potential source of embarrassment to the Treasury in the event of a rise of interest reasonable rate of interest, investors can well afford to assume the risk of price fluctuation.

Let us hope that the Treasury authorities will, now that the pressing problems of war finance have been met, redesign their debt management policies to meet the needs of peace-time prosperity.

3. Revitalize Federal Reserve Controls

The third essential element in any program for financial rehabilitation is to revitalize Federal Reserve controls. The Federal Reserve Board is charged with the responsibility for hold-ing bank credit expansion in check when prosperity threatens to be transformed into an inflationary boom, and for encouraging credit expansion when busi-

ness is falling off. This it can do securities should be voluntary, make borrowing from the Federal Reserve Banks more or less expensive, by open market operations which increase or decrease the supply of bank reserves, and within certain limitations, by changes in member bank reserve requirements to reduce or to expand the ability of the banks to make credit available.

During the war, of course, when the Government had to borrow to meet large war-time deficits the Federal Reserve was under the necessity of using these powers for the sole purpose of making sufficient credit available to insure the success of Treasury financing operations. Thus, the Federal Reserve was not free to use its powers to tighten money rates and to force commercial banks to cease adding United States Government securities to their portfolios, even though the economic situation might have called for restrictive action.

Now that the war is over, however, the time has come for the Federal Reserve Board to terminate this commitment, to give consideration to other factors and to avoid abject subordination of its policies to Treasury needs. Several steps in this direction would appear to be necessary:

1. The Federal Reserve Board should publicly announce that while it believes relatively low interest rates are justified and intends to use its powers to maintain them, it recognizes them, no obligation, actual or implied, to hold interest rates on Government securities at present levels or any other particular levels which they may reach as a result of Treasury debt management policies. Now that the war is over there is neither rhyme nor reason for buyers to be permitted to assume that if they buy an eightyear 2% issue at 1.25% or a 25year 21/2 % issue at 2% the Federal Reserve will guarantee them against loss.

2. The Federal Reserve Board should also take steps to regain control over the expansion and contraction of Reserve Bank cred-The "posted" buying rate on Treasury bills means that the Federal Reserve stands ready to buy these bills whenever presenteffect of shifting control over the volume of reserve bank credit in use to the holders of the bills. This posting of the bill rate should be abolished for it is time for the Federal Reserve to regain they have paid a heavy penalty. control over its own credit oper- Again, if the monetary and fiscontrol over its own credit operations. At the same time the Treasury Certificates of Indebtedness should be released from the unofficial but quite real posting which the Federal Reserve has maintained by buying certificates whenever presented by the banks. Banks which need reserves should not be free to sell their certifi-cates to the Federal Reserve Banks unless the board feels that an increase in credit is desirable. chases and sales of Government on Government securities. This

Board's own initiative.

3. The Federal Reserve should also eliminate the preferential borrowing rate of ½ of 1% on loans secured by United States Government securities having a maturity of one year and less. This is an inducement for banks to assume that the Federal Reserve welcomes the expansion of Federal Reserve credit and is one of the devices which tends to hold short-term interest rates at present abnormally low levels. This action can have high psychological value for it would be another bit of evidence that the Federal Reserve does not consider itself committed to a policy of underwriting the market for Government securities at any price even though the effect is highly inflationary.

There comes a time in the life of every central bank when the financial future of the country depends on whether or not it has the courage to force the Treasury to substitute considerations of national welfare for its own narrow or misguided interest, and that time has come for our Federal Reserve System. The system has a pressing obligation, and an historic opportunity to regain control over bank credit expansion and contraction so that it may again use its power to help prevent inflation and to facilitate the expansion of business to a new high level of prosperity and full employment.

Responsibilities of the Banks

In the light of war-time policies, these suggested changes in Treasury and Federal Reserve policy may seem to be quite revolutionary, but against a longer background they represent a return to conventional and timetested standards of conduct on the part of our fiscal and monetary authorities. Regardless of whether the authorities take steps along the lines suggested above, the commercial banks should observe self-imposed restraints in many of their operations. They should of course, refuse to add to their portfolios securities of less than the highest grade, whether or not the monetary and fiscal authorities take adequate steps to termied by the holders and this has the nate the present incentives to seek higher returns outside the Government market. We all know that whenever in the past banks have lowered their quality standards to obtain higher returns

cal authorities permit rates on United States Government securities to decline to still lower levels. due to starvation of the market for long and intermediate term bonds, the banks should seriously consider the possibility of drawing their loan rates away from the rates they can obtain on Treasury securities. Rates on prime loans and on high grade corporate bonds have convention-Henceforth, Federal Reserve pur- ally held just a little above rates

Gordon Hanlon to Be NY Exchange Member; Heads Cleveland Res. /ill Admit Loring

BOSTON, MASS. - Gordon B Hanlon, member of the Boston Stock Exchange, will acquire the New York Stock Exchange membership of the late Howard F. Clapp, on March 7th, and his firm, Gordon B. Hanlon & Co., 10 Post Office Square, will become Exchange members on that date. Robert P. Loring will be admitted to partnership with Mr. Hanlon. Mr. Loring is cashier of the firm.

may have been a reasonable relationship in the past but today it has little or no justification because the level on Government securities has been unduly depressed by the arbitrary and artificial manipulations of the war period. Competition to put idle funds to use should not, under present conditions, be permitted to reduce rates on non-Government loans and investment portfolios to a point where there is inadequate compensation for risk.

Now that the war is over, it is to be hoped that the authorities will make such a major shift in policy as has been sketched out But, if they do not do so, it is incumbent upon the banks to make their policies more rather than less conservative, to maintain high quality in their loan and investment portfolios, and to follow conservative policies in the maturity of their investments.

Over and above the obvious need for restraint in managing his own bank, the banker has the responsibility of urging his Congressman—who represents him in his Government—to balance the budget, of insisting that th Treasury—who is his debtorfollow debt management policies which are appropriate to peacetime, and of appealing to the Federal Reserve—an institution in which he is a shareholder—to regain its control over credit, so that inflation can be prevented from taking its terrible toll. It is time for us all to speak out against policies which, if continued, will do violence to the private financial institutions of democracy and prevent the nation from realizing the prosperity which seems now to be within our

R. M. Gidney Again

CLEVELAND, OHIO - Ray M Gidney, President of the Federal Reserve Bank of Cleveland since Nov. 1, 1944, has been reappointed President for

the five-year term beginning March 1, it is an-March nounced by George C. Brainard, Chairman of the board of directors.

William H. Fletcher, First Vice-President of the bank since last Dec. 1, has been reappointed to that post for the five-year term begin-

ning March 1, Chairman Brainard said. Both appointments were approved by the Board of Governors of the Federal Reserve System.

President Gidney's affiliation with the Federal Reserve System began with its inception in 1914 when he became Secretary to a member of the Federal Reserve Board in Washington. In 1917 he joined the Federal Reserve Bank of New York and was Vice-President of that institution from 1936 until he was named President of the Cleveland Reserve Bank.

Mr. Fletcher joined the bank 28 years ago after eight years as an assistant and national bank examiner. He was chief examiner and assistant Federal Reserve agent previous to his promotion to Vice-President in 1936.

Organization Meeting of Int'l Fund and Bank

the invitation to send observers to Wilmington Island.

What Must Be Done in Georgia

and Bank. number of cases, including the United States the country's secretary of the treasury or minister of finance will be the country's Governors. Moreover in most instances, it is expected, the same official will serve as Governor on both the Fund and the Bank. Thus, Secretary of the Treasury Vinson will be our member of both boards of governors. Assistant Secretary of State Clayton will be "the Judge's" alternate on the two boards. As will be re-called, during the public debate last year there was considerable opposition to setting up two separate institutions. The Administration won out on this, as on most points, but as a practical matter decided to simplify the operation of the Fund and Bank by appointing the same individual to both boards of governors, with the hope that this example would be followed by the other countries. Some of the latter, however, may feel that the economy of having a single individual on both boards of governors is outweighed by other considerations as where there may be competition among individuals for the distinction involved.

One of the first tasks of the Wilmington Island Conference is the adoption of by-laws for both the Fund and Bank. Draft bylaws have already been prepared by U. S. officials, and there has been considerable conferring among "technicians" of different governments. Therefore, it is surmised that a very considerable area of agreement on the by-laws exists, although the opinions of the technicians concerned is not legally binding on the governors who will come to Wilmington Island.

The boards of governors of the Fund and Bank must elect for each of these institutions the executive directors. In each case these will number 12, and in each case, five of the executive directors must be representatives of the countries having the five largest quotas. While nationality is likely to be the decisive factor in the election of any individual execdirector, technically the board of governors will vote for individuals and not for countries. While the boards of governors of the Fund and the Bank must meet not oftener than once a year, the executive directors are to function in continuous session, once the Fund and Bank are in operation, and they are responsible for the conduct of the general operations. It is the executive directors who select a managing director und and a president for the Bank, who in turn appoint the

Theoretically, it is possible that the two bodies of executive directors will all be present at Wilmington Island and hold their first meetings there. In such event the Fund's managing director and the Bank's president could be selected formally during the March meetings. The Government has selected Assistant Secretary of the Treasury, Harry White, to be this country's executive director on the Fund and Mr. E. G. Collado of the State Department to be our executive director on the Bank. It is possible and even probable that Mr. White may become managing director of the Fund. The salary of this post is likely to be quite substantial, according to White.

Governors and alternates on the Fund and Bank serve without tions.

compensation from those institutions, other than reasonable expenses in attending meetings. Executive Directors are to be compensated. All compensation personal services paid by for Technically, the meeting in the Fund and Bank is to be ex-Georgia will be a meeting of the empt from tax, excepting by the Boards of Governors of the Fund government of which an individ-In a considerable ual is a national. In other words, an American employed by the Fund or Bank must pay American income taxes; a Britisher must pay British income taxes applicrepresentative on the Board of able; etc. Since the headquarters of the Fund and the Bank are to be in the United States this is said to put American employees at a disadvantage as compared to nationals of those countries which give income-tax exemption to their nationals working abroad.

Selecting a Site

The Wilmington Island Conference will have to arrange for selecting the place of the headquarters of the Fund and Bank. It is understood that the site will be in the United States, with New York and Washington the main contenders. There has also been some discussion of placing these institutions at the UNO head-quarters. The latter will be in New York City temporarily.

At Wilmington Island this question, like other specific matters, will be referred to an appropriate committee.

It will be recalled that at Bretton Woods at the time of signing, the United Kingdom delegation made a statement as follows:

In the opinion of the British Government the location of the headquarters of the Fund ought not to be considered without reference to the location of other international bodies which will be established. The same observations apply equally to the location of the projected Bank for Reconstruction and Development. The British Government may therefore find it necessary at some later date to ask that all such interrelated questions should be considered as a matter for decision between Governments rather than in a technical conference.

Since UNO has now selected this country as its headquarters, London must forego such advanages as might have come from playing host to an international inancial body such as the Fund or the Bank.

Admitting Additional Members

A major problem facing the Georgia Conference is the determination of terms and conditions for the admittance of additional members to the Fund and Bank. The problem breaks down into perhaps half a dozen categories. under what conditions First. should membership in the Fund and Bank be extended to counries which, although represented at Bretton Woods, have not yet joined? This group contains countries which want to join soon and others which are unconvinced. To get these countries into the Fund and Bank calls for various des grees of diplomacy.

Another admittance problem relates to former enemy countries including Italy, Austria, Hungary, Bulgaria, Roumania,-and sometime Germany and Japan. Italy's problem is acute, and there is no that country's monetary and reconstruction difficulties should shoulders. Washington would like to see Italy in the Fund and Bank, so that other countries might share to some extent in the risks concerned. To a lesser degree this may be true of the Balkan countries named, although Russia's present dominance of that part of

A third admittance problem concerns former neutrals like Sweden, Switzerland and Turkey, which country is most anxious to rent monetary stabilization opjoin. Sweden only lately has been inquiring about joining UNO, and sistance to members in connection as this writer reported from Stockholm last summer, wants to belong to any international financial bodies set up by the United authority to provide facilities for Nations.

In a category apart are Spain and Argentina. The latter is a member of UNO.

Other Decisions Needed

On the agenda of the Wilmington Island Conference will also be the fixing of the terms of employment of the permanent officers of the Fund and Bank. Also to be taken up is the question of whether to seek modification of securities laws of various states in this country, such as may now impede the sale of the Bank's securities here. There have been some conversations between various state government officials and the Treasury Department in Washington on this matter, but the Treasury insists that it has not taken the initiative in the matter. which is one for the World Bank or for investment interests handle.

Russia's position is sure to be a subject for much unofficial discussion in private corners of the Hotel Oglethorpe. As at the Quebec Conference on food and agriculture last year, the USSR at Wilmington Island will be represented merely by observers. At Bretton Woods, as at so many international conferences since, the USSR, whatever might be the reasons, has been the most disturbing element. At Brette Woods this country made strenuous efforts to placate and appeare Moscow, even to the extent of taking onto our own shoulders \$300,000,000 of Russia's quota in the Bank. Then, at the last moment, in what Secretary Morgen-"an inthau there described as dication of the true spirit of international cooperation," the USSE agreed to take its assigned quot: in the Bank, Today, the United States stands committed to a \$3,-175,000,000 guota in the Bank, inculing the \$300,000,000 taken over from the USSR, while the latter is still thinking over whether or not to join the program.

Russia's abstention from participation in the Fund and Bank is consistent with that country's general attitude of suspicion growing isolationism, summarized few weeks ago in Marshal Stalin's election speech. Part of Russia's reasons may be the distaste with which Moscow must view the Bretton Woods requirements for the disclosure of ecoinformation now locked in the Kremlin. For example, the Fund requires all members to disclose their gold holdings. Some Americans believe that Russia fears to do this, lest the size of the holdings and goldmining capacity frighten America into ending its gold-buying policy.

Russia's part in world trade heretofore has been very small and from this standpoint its membership in the Fund is not extremely important. It must be noted, however, that since VE-Day the USSR has acquired a dominant position in the internagood reason why the solution of tional trade of various smaller countries, and international trade rest entirely on Uncle Sam's round practices are very much the concern of the Fund. Russia's policies may not fit into the international-cooperation world represented by the Fund and Bank.

U. S. Will Seek Clarification

One of the first acts of the United States will be, in accordance with sections 12 and 13 of the approved by the President July progress, or even to survive, civilization that has been devel-

Bank, as to its power to make stabilization loans; and (b) by the Fund, as to whether its power to make loans extends beyond curerations to afford temporary aswith seasonal, cyclical and emergency fluctuations in their balance of payments, or whether it has relief, reconstruction, or armaments or to meet a large or sustained outflow of capital on the part of any member. In the case of stabilization loans by the Bank, the policy laid down by the Congress is to see that the Bank is given such authority, in case it does not already possess it. In the case of the Fund's powers just described, if the Fund holds that it has them, the policy of the Congress is to secure an amendment of the Fund agreement depriving the Fund of such powers.

Changes Since the Bretton Woods Conference

The Bretton Woods Conference was held in the midst of the war. Since then there have been a number of important changes some of which tend to make easier the tasks of the Fund and Bank. and others of which have the op-posite effect. On the favorable side, the Axis has been overthrown. Reconstruction has started. The Export-Import Bank has been expanded and is performing some of the more urgent func-tions which at Bretton Woods were envisaged for the Bank. In some areas the "postwar" position of the currency is clearer than at the time the Fund Agreement was signed in 1944. UNO and other forms of international cooperation are a reality, and the United States is formally committeed now to many plans which in 1944 were not even down on paper. The economic strength of the United States is materially committed to world recovery.

On the other side of the picture is the deterioration in the rela- otherwise.

3, 1945, to "obtain promptly an tions of the big powers; the still-official interpretation" (a) by the unchecked decline in the value of unchecked decline in the value of certain currencies like the franc, the yuan, and the drachma; the disturbing political and economic situations in the Netherlands East Indies, India and other parts of Asia: and the large requests for dollar loans which have come to public attention in recent months.

Georgia Conference Smaller than **Bretton Woods**

Because of the difference in the task before it, the conference at Wilmington Island will be smaller as well as shorter than that held at Bretton Woods, and the pace will be more leisurely, as befitting a Southern environment, As at Bretton Woods, the press will not be housed at the hotel where the meetings take place, but will have to commute from Savannah, some seven miles away. Conference secretariat, supplied by the United States as host, will also be housed at several miles distance. All arrangements, including press, are being handled by the State Department.

If the Wilmington Island Conference lives up to expectations, the officers of the Fund and the Bank selected there will probably get to work on their plans sometime in April. Early in the summer, it is thought, the Fund and Bank will actually be doing business. In the case of the Bank there may be two or three months delay between the receipt of a loan application and its granting. Meanwhile, the Export-Import Bank will continue to take care of the more immediate needs of the outside world for help in reconstruction and development. Some Congressmen who played an important part in the Bretton Woods legislation regard this as a reversal of the promised order of events. In the earlier scheme of things the institutions established were designed to take care of the more pressing needs of the postwar period. Events have decreed

Ways to Industrial Peace

just demands.

But, it seems to me that this sighted. Is it not true that the the preservation of a free economic system lies in the reassertion by government of the supremacy of the public interest in labor disputes as in all other conflicts between human beings in a competitive, private enterprises. modern society?

Wants No Dominant Class Interest

Let me affirm with all the vigor of a lifelong conviction that individual freedom must be preserved and that a competitive system of private enterprises is the necessary economic basis for a olitical democracy. time theory that the best government is the least government should not blind us to the fact that the least that a modern government must do in order to maintain individual freedom is to make sure, first. that no one class or element of society is permitted to dictate the terms and conditions of living and working to the rest of the people.

Second, government must be able to require all competing elements to settle their differences by peaceful means. Otherwise, the warfare of classes will develop a discordant, disorderly society in which masses of people dependent on one another will waste their energies and dissipate their wealth in fighting one another. This civil warfare will breed a national inefficiency in which the the world raises peculiar ques- Bretton Woods Agreements Act nation will be unable to make old. It is really the infant of a

the workers than to invite strikes against the aggressiveness in and disorders by discouraging un- peace or war of other, internally stronger nations.

We should realize that throughmanagement attitude is short- out our history it has been necessary from time to time to break sole hope of industrial peace and down the power of one ruling class after another in order to prevent monopolistic controls of business which grew into political controls, intolerable in a democracy and fatal to a system of free,

It is only necessary to call the roll of the railroads and public utilities, of industrial monopolies, of banks and other financial organizations, to remind ourselves of the private empires within the state whose authority and irresponsible power had to be checked and made subordinate to government.

Nevertheless, when we review the development of public controls through utility commissions, anti-trust laws, and securities and exchange regulation, we can all groan together over the spreading bureaucracies that now regulate so much of our economic life. So it is not surprising that we all desire less and not more of such political controls.

It is not surprising that thinking men of both management and labor dread and oppose the creation of any new, far-reaching bureaucracy to regulate labor rela-

Government Must Be Supreme

But, let us realize that these trials and tribulations are only the growing pains of an industrial civilization that is hardly 75 years

We have not yet learned how to unions. make the state superior to great modern organizations and at the same time leave these organizations essentially free. We have learned much more about how to make the state superior to great men and at the same time to leave these men essentially free.

We enjoy greater individual freedom and security in the United States today than masses of human beings have ever enjoyed This freedom is not seriously menaced by our government today. It is menaced by organizations that presume to tell a man whether he can work or not, and under what terms and conditions he may work. It is menaced by unions that presume to establish monopolies of employment, that prate about the "right to work" while they go farther in than any industrial monopolists of our past history ever dared to

Special Privileges Given Labor Organizations

It is menaced by these labor organizations because they have been granted by law special privileges and immunities which make it possible for their leaders to tyrannize over both organized and unorganized workers, to fight employers and to resist officers of government with mob violence, to foment and to carry on civil warfare and thus to compel the abuse of private force to win a public to give unwilling support victory. It is only when governprice of peace.

These lawless powers have been created by laws which were in-tended to give to workers, who individually weak. the strength of associations protected and fostered by government. It was intended that these labor unions, being given an equality of bargaining power with large employers, would then be able to gain for their members contractual rights to reasonable wages and working conditions. Thus it was assumed that labor contracts could be peacefully negotiated and peacefully enforced and labor relations established and maintained, as are all other commercial relations, on the sound basis of contract—"that slender thread upon which hangs all our civilization."

But, this reasonable peace program is breaking down under the foul blows of huge, irresponsible These national labor unions. unions have greater economic power than even the largest of our business enterprises. These unions, by their closed shop strategy, eliminate any competitive restraint upon their demands. A rival union can only win members by promising more wages for less work-so that rivalry among unions breeds only more unreasonable demands and greater violence and coercion in enforcing them.

The anti-monopoly laws forbid employers to combine to raise prices. But labor's express exemption from these laws not only permits but invites labor combinations to raise wages, with the inevitable result of raising prices. The perennial competition for the consumer's dollar, which persists within and between industries, and fears of more political regulainfluence deters labor unions from using their monopoly power to push labor costs and resulting as those dominated by the building trades, establish prices far above the purchasing power of the by this grant of a much more vi- tried to end civil warfare arising

oping for more than 75 centuries. cious monopoly power to labor out of labor disputes. If we try lic interest. This reliance may

Lawless Picketing

There is a great deal of unreasoning clamor for local enforcement of the criminal laws to stop warlike picketing and to protect the rights of the public to free and safe access to public buildings, and the rights of employers and employees to free and safe access to their places of business. But, so long as strikes and economic violence are accepted as legal methods of settling a labor dispute, it should be recognized that physical violence and intimidation will be used, regardless of laws that prohibit such offenses.

If the law itself encourges the use of collective coercion to advance selfish interests, regardless of the resulting public and private injuries, how can we draw the work" while they go farther in line between physical and eco-their efforts to deny that right nomic violence? If employees are permitted to ruin a business or to starve or freeze the public by stopping food or fuel production or transportation; if employers are permitted to ruin or starve employees by similar methodsand if this is the legally approved way to settle a labor dispute-how can officers of the law be expected to restrain the fighting forces from physical violence?

When civil government fails to establish and enforce processes of justice for the settlement of controversies, then government itself is responsible for the use and to unreasonable demands as the ment has provided the means of peaceful adjustment and then has imposed on all parties a legal obligation to use those peaceful means, that government can justly or successfully stop the use of private force and violence by all law-abiding citizens.

Government's Responsibility

It is the long overdue duty of the federal government to provide a legal machinery for the peaceful settlement of labor disputes of national concern.

It is the duty of government also to set the workers free from the tyranny of labor monopolists. to set business managers free from labor dictation of management policies, to set consumers free from monopoly prices imposed by non-competitive labor costs. It is the duty of the government to revive a competitive system that is being slowly strangled by labor monopolies, aided by willing and unwilling business monopolies.

.It is not the duty of government to destroy and cripple labor unions. Labor organizations and genuine collective bargaining provide the necessary checks and balances against the otherwise excessive economic power of organized money controlled by big business management.

Big business organizations and big labor organizations are fit instruments for the service of a modern society. But the govern-ment has a right and duty to say to both: If you cannot settle your conflicts of interest by peaceful means, which will be made available and protected by law ther you must make a final choice: either you will cease trying to work together and will peaceably go your separate ways, or you will call upon the impartial agencies tion, always operate to restrain would-be business monopolists from squeezing the hard. But no such restraining of justice which government will establish for a judicial determination of the terms and conditions under which you will work together.

The government has a duty to all the people to command an end to civil warfare and an end to a prices so high that industries, such rule of brutal force that breeds war. This is the twentieth cen-The age of the duel and tury. trial-by-combat has long since most needy customers. Thus the effectiveness of our anti-trust the domestic field of labor relalaws is destroyed; and the prose- tions. Today we are even trying cution of businessmen for violat- to end international wars. We ing them is made a tragic comedy least trying. It is time that we

we can succeed.

But, we are not even trying so long as we debate such false or trivial issues as: Should we prevent strikes? Is it desirable to fact-finding commissions? Should a government labor tribunal have the power of sub-poena? Think of a nation blanketed with courts and commissions, investigating every private matter in which there is any public interest, and still debating whether a labor dispute commission should have the power of sub-

Of course these are not real is-The real, decisive issue is whether the government is to be trusted to insist upon the peaceful settlement of labor disputes. The answer is a simple one. If the government can't be trusted to preserve domestic peace it is unworthy of any trust. If anyone still has faith in his government, if he is a loyal citizen, he must be willing to authorize his government to preserve peace and good order regardless of his uncertainty as to the fairness or ability of the public officials who may now or hereafter administer the law.

All Are Workers

In a broad view, "labor" includes nearly all our people. Most of our citizens are workers: farmers, business men, housewives. professional men and all of the millions of producers, investors and consumers. Industrial wage earners are not the most numerous or the most essential fraction of our working population. Food producers are a primary need. But, no class or element of our society can advance without the cooperation of all the others. We all go up or down together.

The leaders of organized labor provide only part of the leadership upon which the welfare of the nation depends. They cannot be permitted to arrogate to themselves a domineering authority to advance the interests of unionized labor in callous disregard for the larger interests of all the people.

There is only one authority that can be and must be made su-That is the authority of the elected representatives of all the people on whom we must rely for the final judgment as to when and where the demands of selfish, class interests must be subordinated to the demands of the pub-

sometimes be placed in unworthy men. But, in the long run, if we ourselves are loyal to our government, we will find that most of those to whom we entrust our powers of self-government will prove faithful to that trust.

This is an appropriate time to look back across the graves of the soldiers of every generation who gave their lives to build and to preserve this nation and-in a paraphrase of Lincoln's noblest address-to take a high resolve that these dead shall not have died in vain, that this nation under God shall have a new birth of freedom, and that every attempt to establish government of a class, by a class and for a class shall be destroyed, so that government of all the people, by all the people and for all the people shall not perish from the earth.

W. E. Hutton & Co. Adds to Staff

William O. Gay, Jr., formerly Lieut. Commander, USNR, and Ernest E. Keusch, Captain AUS, have become associated with W. E. Hutton & Co. in the firm's New York office, 61 Broadway. George C. Lee, Jr., Lieut., USNR, and John M. Bleakie, Lieut. Commander, USNR, have joined the firm in Boston, at the 75 Federal Street office. Joseph W. J. Cooper, formerly in Government service, has become associated with the firm in its Baltimore office, First National Bank Building

Quinn Trading Mgr. For Livingstone & Co.

SAN FRANCISCO, CALIF .-John J. Quinn has been appointed Manager of the San Francisco trading department of Livingstone & Co., 317 Montgomery Street, Willard H. Livingstone, President, announced today.

Mr. Quinn is well known in West Coast financial circles and has been in the trading end of the business for the past 20 years.

Green of AFL Finds Govt.'s Wage Price Policy Unsatisfactory

President William Green of the American Federation of Labor issued a statement on Feb. 15 in which he asserted that "the Gov-

ernments new wageprice policy is unsatisfactory to the American Federation of Labor and un-acceptable." Green Mr. added:

"It constitutes a backward step -- a return to wartime economic conditions. It re-establishes wage fixing by Government and strikes a

William Green

body-blow at free collective bargaining. No employer will be willing to bargain collectively with a labor union under the restrictions imposed by the new policy.

"We realize that the Government faced a serious difficulty in seeking to promote full production while wage and price disputes disrupted reconversion. But the new policy is no solution. It will only serve to increase confusion and multiply the nation's troubles. We fear it will also create widespread social, industrial and economic discontent and upheavals."

Securities Salesman's Corner

By JOHN DUTTON

There is a vast difference in values between many securities that sometimes sell at, or about the same price levels. But during periods of advancing bull markets such as the present one, the public often overlooks value and buys the better known name securities, which in many instances represent the least attractive investment opportunities.

Certainly no sound and lasting clientele can be established unless the securities that you sell hold up. But this alone is not enough. Over the longer term those securities should out perform the averages in price appreciation. The uninformed security buyer for the past several years has seen almost anything that he touched advance in What he usually does not realize is that he has been riding a It has been the gradual and creeping inflation of everything that has provided the price advance; rather than the internal growth and better prospects of the company in which he became a stockholder, that made the difference.

It is therefore advisable to lay stress upon the difference between a security that should advance because it has internal growth possibilities, and one that may advance just because everything else is going to have a rise in price. On this point it is now well agreed by students of the markets that we are no longer in a position to close our eyes and say that everything will be all right for an indefinite period ahead. It is difficult to determine just how much more of this bull market lies ahead-and when it will terminate We've been in it too long for complacency.

But if we begin to show our customers that real values can still be obtained if you look for them; and we can convince them that it is a much safer procedure to buy stock in a smaller company, that has good management, with ample capital for its needs and a sound position in its industry, and buy that stock on a low ratio of earnings to price, as against the big name company on a higher ratio -then we are protecting our customer's better interest, and our own clientele as well. For, sound values will have an opportunity to assert themselves in the future-increase net per share never fails to bring about eventual price improvement, and that kind of market appreciation sticks to your ribs because it is based upon such tangibles as increased assets and earning power.

Letters or advertising could be prepared which are based upon this inviting theme. It's the kind of intelligent promotional material which will not only help those firms who use it, but it will help the public as well. The more of the truth the investing public understands the better customers they will be. Something along the lines of the following advertisement is what we have in mind.

INVESTMENT OPPORTUNITIES

The best investment opportunities are not always among the so-called "blue chip" market leaders, that are now selling at their highest price since 1937.

In our opinion, it is the medium sized, growing company, that has aggressive management, attractive products and superior merchandising ability, that will lead the way during the next

We have assisted many individuals as well as institutional investors to select SPECIAL SITUATIONS THAT HAVE BEEN FAR ABOVE THE AVERAGE IN PERFORMANCE, both as to income and price appreciation.

Your further inquiries are invited. BLANK & CO. **Investment Securities**

Letters, newspaper advertising, and personal solicitation could be built around such a theme. Its nothing more than telling the true story of what every dealer offers to his customers—better values throught research and investigation. Incidentally, if the special situation idea is properly developed it does away with the old objection, "is it listed?" You don't find the best bargains are confined to You don't find the best bargains are confined to any exchange-or over-the-counter either-the best opportunities are WHERE YOU FIND THEM. Once your customers understand this point-and they see some performance that backs up your argument -the rest is easy for you and for them.

Stockholders of Industrial Rayon Corp. will be asked at the annual meeting March 27 to amend the certificate of incorporation to increase the authorized common stock from 1,200,000 to 3,000,000 shares.

The company's directors also recommended that the present common stock without par value be changed to \$1 par value and that holders approve a split of the outstanding 759,325 common shares so each would be changed into two shares of the proposed \$1 par common.

Charles W. Carvin of New York, a vice-president since 1941 and head of sales since 1943, was elected to the board, succeeding Fred W. A. Vesper of St. Louis, who died last January.

Freight Cars on Order **Increased in January**

The Class I railroads on Feb. 1, 1946, had 38,090 new freight cars on order, the Association of American Railroads announced on Feb. This included 13,179 hopper (which included 3,266 covered hoppers), 5,120 gondolas, 718 flat, 13,132 plain box, 4,221 automobile, 1,620 refrigerator, and 100 miscellaneous freight cars. New freight cars on order on Jan. 1, last, to-taled 37,160 and on Feb. 1, 1945 amounted to 36,734.

They also had 454 locomotives on order Feb. 1, this year, which included 81 steam, six electric and 367 Diesel locomotives. On Feb. 1, 1945 they had 451 locomotives on order which included 80 steam, two electric and 369 Diesel.

The Class I railroads put 2,457 freight cars in service in January, which included 968 hopper (including 35 covered hopper), 521 gondolas, two refrigerator, 282 automobile box and 684 plain box freight cars. In January, 1945 the railroads put in service 4,468 new freight cars.

They also put 21 new locomotives in service in January, of which 11 were steam, and 10 were Diesel. New locomotives installed in January, 1945, totaled 34, of which there were three steam, and 31 Diesel.

Sugar Bill Passed

A bill which was passed by the House and sent to the Senate on Feb. 4 would permit the Commodity Credit Corporation to make price support payments on the 1946 Puerto Rican and Hawaiian sugar crops, according to the Associated Press in its Washington advices, which added that the House Banking and Currency Committee, in presenting the legislation to

"The Committee has been advised that the price of refined sugar will be increased one-half cent per pound early in February. After this increase becomes effective, there will be a loss of about six-tenths cent per pound on sugar brought into the United States from Puerto Rico and Hawaii.

"The enactment of this bill is necessary before this sugar brought in from Puerto Rico and Hawaii can be sold and distributed to consumers in the United States.

"Stocks of sugar are low, particularly in the eastern and southern parts of this country, and sugar will not be available to meet present ration requirements unless in immediate and constant supply from the Caribbean is assured."

Tomorrow's Markets Walter Whyte Says-

Technical indications now point to rally of about 15 points. Traders to benefit most. Panic selling responsible for most of recent break.

For some weeks this colamounted to a one-man campaign against the dangers of over-optimism. It particularly stressed the menace that faced the market once the wild-eyed bullish public bewho have been through the wild upsurges and the equally wild breaks of late 1929 knew what damage could be done. To most of the present day poppy-cock.

One of the arguments widely quoted against a break was one which pointed a reassuring finger at the excellent conditions of customers' ac-

King George Signs **Bill Nationalizing** Bank of England

The bill to bring the 250-vear old Bank of England under public ownership has become a law with the granting of Royal Assent. Prince George VI affixed his sig-nature to the bill on Feb. 15. The House of Lords passed the bill without discussion on Feb. 6, thus finishing legislative action on the first measure in the Labor Government's Nationalization program. The bill passed the House of Commons on Dec. 19, by a vote of 306 to 126, and reference thereto was made in our issue of Jan. 3, page 58. An item bearing on changes made in the bill in Commons on Dec. 17 appeared in these columns Dec. 20, page 3036. Under date of Feb. 14, Associated Press advices from London said.

"Described by Labor party members 25 "a great charter of free-dom for the English people," the measure transfers the bank to public ownership, with administration by a Governor, Deputy Governor and court of ten directors appointed by the King.

"The capital of the private bank was \$58,212,000. It has paid 12% dividends annually since 1923. Shareholders will be compensated with Government stocks bearing 3% interest.

Scheffmeyer & Co. Admits

Scheffmeyer & Co., 26 Broadway, New York City, members of the New York Stock Exchange, will admit Edwin S. McKinney, Eva M. McKinney, and Louise T. McKinney to limited partnership in the firm on March 7th.

> They did go down to about 198 (actual figure 197.65) and rallied to about 206. I then said that this upper level was the center of a trading area that took three weeks to establish, and that between American Locomotive, Amerithose two points "is the area can Steel Founders, Chrysler, of decision.'

In last week's column, where this area of decision was discussed, I warned that the lower figure must be held and that if it broke ". . . a large . . . amount of public selling . . . will carry them much lower than generally expected."

There is little point in beating a dead horse. What you saw, and what you were warned against, is now history. We have to determine now what the pattern will be from here.

Using the technical yardstick the first real break carried the averages from about 206 down to about 192. A minor rally brought them back to about 197. Taking that entire process and con-

A Uniform Treasury Certificate as Bank Reserve

(Continued from page 1087) mainly based upon bank holdings of public debt securities.

II

The new position of the public debt as the chief earning asset of the commercial banks raises a number of major problems for the Reserve System:

(1) Its control of commercial bank lending has been seriously impaired. When a commercial bank has a large portfolio of marketable securities, it need not seek the aid of its Reserve bank to expand its direct loans after using up its excess reserves. It can sell securities in the open market. The kind of loans it makes as well as their aggregate amount is placed beyond the reach of the Reserve bank until the commercial bank's marketable securities are exhausted. The Reserve banks can still restrain a net credit expansion by the member banks as a whole by limiting member bank reserves. But undesirable types of bank lending might continue to expand, the banks obtaining funds therefor through the sale of Governments to other banks and to nonbank investors. Such sales would transfer the inactive balances of the purchasers to the sellers or borrowers who would put them to active use. In other words, bank lending would continue to finance an expansion in the rate of spending, and in undesirable directions, even though no net increase occurred in the nominal amount of Reserve or member bank credit outstanding.

pronounced to cause severe depreclation in the market value of 1944, the total deposits of the in-Government securities could it be relied upon to stop an undesired loan expansion. At sharply lower many bankers would doubtless forbear to sell their Governments because of the book losses they would realize, even in 1934; by 1944 these proportions though the proceeds could be had shrunk to approximately 6% loaned out to customers at high and 7.6% respectively. rates of interest. In short, an effective over-all curtailment of credit under present conditions would operate through and function like a specific attack upon the Government bond market.

(2) The maintenance of an orderly bond market for Government securities has assumed a new importance that conflicts with commercial loans. quantitative methods of controlling credit. As of June 30, 1945, \$38 billion of the \$85 billion of Governments held by commercial banks consisted of bonds whose maturities were more than five years away. A 11/4% five-year note would drop nearly six points below par if it went to a 2½% basis; an eight-year 1½% bond would drop more than 7 points under par. The 14-17 year 21/4% bond issued in the Victory Loan would drop 634 points if it went to a 2.75% basis; and a 22-27 year 2½% bond would drop about 9¾ points below par if it went to a from holdings of Government se-3% basis. A decline of only 3% curities they are led to respond in the aggregate market value of commercial bank holdings of Governments would wipe out onethird of their total capital funds.

(3) A new question arises respecting the legitimate level of bank earnings when the latter are mainly derived from Government securities. The traditional concept that a commercial bank earns interest for the service of substituting its superior and better known credit for the inferior and lesser known credit of the borrower is strikingly inapplicable to the present situation in which the commercial banks, with total capital funds of \$8 billion are extending credit to the United States Government in the amount of \$85 billion...Other grounds for interest payments by the Government rency be secured by United States to the banks may be readily found bonds bearing the circulation in the monetary machinery pro-

as the result of their increased | lation, reserves in the form of holdings of Governments, the net profits of member banks in 1944 Reserve Bonds equal to stated were two-thirds larger than in 1941 and larger than in any previous year. They rose by another 25% in the first half of 1945 over the like period of 1944. The wartime boom in bank earnings difiers from that of other industries in that the supporting conditions will not disappear with the end of the war. The existence during the war of high excess profits taxes and of high taxes on ordinary corporation income has thus far both obscured and mitigated the questions of equity and public relations created by the amount and Governmental source of bank earnings. These questions will be aggravated from now on with the excess profits tax repealed and other corporation income taxes reduced.

• (4) Will member banks be dis posed to assume the normal risks of commercial lending in suitable volume under present conditions? With the great increase in their holdings of and earnings from Government securities, many commercial banks no longer possess the incentive they once had to seek commercial loans. They can now make a good living without taking the risks of direct loans to business. Since they are profitseeking enterprises, this fact alone would not necessarily act as a strong deterrent. But it is joined and made doubly effective under present conditions by another inthe unprecedently thin fluence: Only if the general restrictive and still shrinking capital ratios credit policy were sufficiently of the commercial banks. Between the middle of 1934 and the end of sured commercial banks rose from about \$37 billion to about \$128 billion or by 246%. capital funds constituted about 17% of their deposit liabilities and about 19% of their earning assets had shrunk to approximately 6%

> These circumstances impair the ability of the Reserve System to stimulate direct lending by banks. An easing of credit conditions would doubtless induce many banks to add further to their hold ings of Governments rather than to assume the risks that go with any but the highest qualities of

> The continuance of the commerical banks as private institutions does not rest upon their ability to buy and own Governments and to create deposits in the process. The Government or the Federal Reserve banks alone could perform this function. The commercial banks doubtless contribute invaluable services to their communities as money changers, repositories, and bookkeepers, among other things. But their most vital function as private enterprises is the lending function. If by reason of excessive earnings curities they are led to respond inadequately to the legitimate needs of their communities in this respect, they give up the most vital reason for their continued existence as private institutions.

In my opinion, least violent solution of the major banking prob-lems arising out of the public debt would be a variant of a proposal I made at a meeting of the American Statistical Association five years ago: the substitution of a single uniform Treasury obligation, which would constitute a part of the required reserves of commercial banks, for the bulk of their present holdings of Governments. Just as it formerly required that national bank note curprivilege, Congress could require vided by the banks. But how of perhaps \$1 million to maintain, much shall the banks be paid for in addition to other reserves re-

performing these services? Mainly quired by Federal or State reguspecial Reserve Certificates or proportions of their deposit liabil-The Reserve Certificates ities. would bear interest at perhaps 1%, and would be callable for exchange into like securities bearing a higher or lower rate of interest, or for final redemption, at any time upon four months' prior notice, by act of Congress. would have no final maturity date. They would be payable upon the demand of any bank. Were it not for the unnecessary break with tradition that would be entailed, the additional reserve requirement could consist simply of interest-bearing deposits with the Treasury. Initially any bank could obtain the Certificates in exchange for outstanding Government obligations. Afterward, the Certificate could be purchased from the Treasury at any time in the amounts needed to meet the Certificate Reserve requirements; and banks whose requirements had fallen would be required to turn in their excess certificates for redemption at stated times, such as the end of each week or month.

Under the proposal as here outlined, the present reserve requirements of the Board of Governors of the Federal Reserve System would continue to govern credit expansion. There would be no fixed ceiling on the amount of Reserve Certificates the banks might purchase from the Treasury, and no formal limit on the amount of ordinary Governments they might purchase in the open market, just as there are now no such limits. But the amount of funds available for the total of bank acquisitions of Governments would be determined, as now, by the ordinary reserve requirements and credit policy of the Reserve System; and the amount that Reserve Certificates would constitute of the total would be limited by the sum needed to satisfy the Certificate reserve requirements. The Treasury could use the proceeds of its sales of Reserve Certificates for the retirement of other obligations if the cash budget were otherwise balanced.;

An increase in the ordinary reserves of the member banks as a whole, which could be brought about by an increase in Federal Reserve credit, gold imports, or a turn of currency from circula-tion, among other means, would be capable of producing the same multiple expansion of member bank credit as is the case today, but one-half of the expansion would have to take the form of increased holdings of Reserve Certificates (assuming a 50% Certificate Reserve requirement). Thus, if a customer of Bank A sold \$100 of marketable securities to a Reserve bank, and deposited the proceeds with Bank A, the latter's reserves and deposits would each be increased by \$100. Bank A would be required to keep about \$20 of its new funds as ordinary lawf purchase \$50 of additional Reserve Certificates from the Treasury, leaving it \$30 free for loans and other investments. The \$30 it so uses plus the \$50 paid to the Treasury, which the latter would

†Shifts of deposits between banks would result in no change in the amount of Reserve Certificates outstanding. Bank A, which gained \$100 of deposits, would meet the Certificate Reserve requirement by buying \$50 of Reserve Certificates from the Treasury at the next settlement date (and would meet its ordinary reserve requirement by depositing \$20 with its Federal Reserve bank). Bank B, which had lost the \$100 of deposits, would be required to turn in \$50 of Reserve Certificates for redemption on the same settlement date (and would also have its ordinary reserve re-

use to retire an equal amount of payable on demand, so far as any its other obligations, would find their way into the reserves of other banks to serve in similar manner as the basis for deposit expansion, until a total of approximately \$500 of new member serves created by the Reserve bank purchase of securities (the 5 to 1 ratio being the result of the 20% average ordinary reserve requirement).

The precise percentages that the Reserve Certificates should constitue of deposits from time to time might well be left to be deterby the Reserve System within limits established by Con-The percentages could vary for different classes of banks and for demand as against time deposits, as is true of ordinary reserve requirements. At present they could well be as high as 65% against the demand deposits of central reserve city banks and moderately lower for other classes, with perhaps 50% required against time deposits. The percentages should be so fixed as to leave the banks with a small amount of ordinary marketable Governments; and Federal Reserve credit policy, at least in times of market weakness, should provide the banks with funds with which to purchase more on the market. The purpose of this suggestion is to maintain the position of the commercial banks as part of the mechanism of the bond market, providing wholesaling and distributing services. The Reserve banks alone, operating in a few large centers, could not perform this service as well, nor could they do it without direct effects upon the volume of member bank reserves.

By making the Treasury, rather than the Federal Reserve banks or the Federal Deposit Insurance Corporation, the depository agency for the new reserves, the jurisdictional limitations of these other agencies would be avoided All banks, whether or not mem-bers of the Reserve System or insured by the FDIC, could be brought conveniently under the new requirements. The only reason for the suggested exemption of banks with demand deposits of less than \$1 million is to exclude the numerous small banks that might find the requirement of certificate reserves a hardship both to themselves and to their customers, and that collectively own only a tiny fraction of the outstanding Governments. Of the 14,000 commercial banks in the United States, the less than onehalf with \$1 million or more in Governments account for well over 90% of the aggregate commercial bank holdings of Governments.

It is suggested that the rate of interest be fixed by Congress rather than the Secretary of the Treasury. If the latter had full discretion respecting the interest rate, yet ownership of the securities by the banks were mandatory, the Secretary would be continu-ously charged with imposing too low a rate, and some Secretary might indeed actually reduce the rate to practically zero. On the other hand, if the Board of Governors or some other constituent of the banking system had the power to fix the rate it might be charged with being unduly generous to the banks.

The principal advantages of transforming the bulk of the bank-held portion of the public debt in this fashion may be summarized as follows:

(1) The Treasury would permanently fund at a low interest rate about one-half of all the outstanding marketable obligations in private hands. The result would be to remove this large fraction of the total from the category of ordinary public debt obligations and to eliminate all the refunding operations otherwise necessary in Reserve Certificates would be in debt which was to be absorbed

individual bank was concerned, the Treasury would never experience a net loss of cash to the banks as a whole unless the banks themselves were experiencing a reduction in their deposit liabilibank deposits had been erected ties. Commercial banks that were on the basis of the \$100 of re-experiencing adverse balances at the clearing house would cash in some of their Certificates from time to time; but barring a deflationary policy by the Reserve System, such sales would be counterbalanced by an increased demand for the Certificates on the part of other banks whose deposits were being increased.

(2) The Reserve banks would regain a considerable measure of control over direct bank lending because the individual commercial bank could no longer obtain funds for loan expansion through the liquidation of its Governments except in the greatly reduced measure in which it would continue to own ordinary marketable Treasury obligations.

(3) If the Reserve System should adopt a restrictive credit policy, the impact would not be as concentrated upon the Government bond market as would be the case under present arrangements. The banks would have only a small fraction of their present holdings of marketable Govern-ments. The threat of sporadic waves of large-scale selling of Governments by the banks and the accompanying threat to the stability of interest rates and the supply of money would be greatly reduced. Under ordinary circumstances, the ability and disposition of the commercial banks to cushion the bond market against waves of selling by other investors and to perform their traditional and valuable services in the distribution of new and refunding Treasury securities would be renewed and reinforced.

(4) The problem of bank earnings would be solved in an equitable, safe, and reliable fashion. The suggested initial rate of 1 per cent compares with the rate 3/4% paid to commercial banks in Canada and Australia on special deposits made with the Treasury or central bank during the war, and with the rate of ½% now paid by Great Britain on such deposits. If continuing additions of Certificates to bank portfolios created excessive earnings from the 1 per cent rate, an appropriate reduction could be

The commercial banks would be relieved of all worry over the future course of interest rates and bond prices so far as the bulk of their assets is concerned. With perhaps 50 to 65% of their earning assets no longer subject to price risks, as well as perhaps 25 per cent more in the form of cash, the liquidity and safety of the individual banks and the system as a whole would be enormously increased. The effect would be tantamount to a huge increase in banking capital. In consequence, the ability and disposition of banks to assume ordinary risks in lending would be en-hanced. On the other hand, the large aggregate reserve requirements would promote a stability in the volume of deposits approaching that of a 100 per cent reserve system.

(6) Increases or reductions in bank holdings of Government securities could be better regulated with deliberate regard for their effects upon the country's volume of bank deposits and rate of spending, instead of being permitted to occur in response to other influences without regard to their monetary effects. The Certificate Reserve plan would also have definite advantages in making further additions to the public debt, if they should occur, more manageable within substantially our present institutional arrangements. A permanent market at a low interest rate would be asconnection with it. Although the sured for that part of the increase

by the commercial banking system. The Reserve Certificate requirements against bank deposits would merely be raised as needed from time to time and the additional Reserve Certificates sold to the banks. If it were decided to finance additional deficits by the sale of securities directly to the Reserve Banks instead of to the commercial banks, similar certificates could be issued, with ordinary reserve requirements being raised to offset the expansion that would result in member bank reserves. The broad changes that have occurred in the environment of monetary-banking policy are not easily reversible. The old climate of opinion cannot be restored by fiat; the new monetary importance of the federal budget and of promotive credit agencies is at least as likely to grow as to decline; the enlarged federal debt, barring alterations in present monetary practices, will remain for generations. Consequently, in reviewing these changes, I have not strained to make old policies appear appropriate for new conditions. Instead I suggested that we accommodate our policies and procedures to the new environment, as by a greater resort to selective administrative controls of credit as against over-all quantitative controls, by better provision for coordinating credit and fiscal policies, and by transforming the bulk of the Treasury obligations now held by the banks into a security that would constitute a part of their required re-

DALLAS, TEXAS—Dittmar & Co. of San Antonio, one of the oldest investment houses in Texas. have reopened their offices in the Dallas National Bank Building under the management of Alfred Bailey.

Mr. Bailey began his career in the investment field with Halsey Stuart & Co. in Chicago. He was later associated with that firm in Philadelphia and more recently with Penington, Colket & Wisner. He was commissioned in the Army Air Forces in May, 1942.

Associated with Mr. Bailey in the new office will be Turner Austin who was with the firm in San Antonio.

"Our Reporter on Governments"

By JOHN T. CHIPPENDALE, JR.

The policy to be followed by the Federal Reserve Banks in conjunction with the retirement of debt by the Treasury will have an important bearing on the Government securities market. . . . The refunding operation will have its effect on the money markets, yet the action of the Central Banks will go a long way in determining whether there will be a flattening of the yield curve, or a continuation of the trend to higher prices. . . The only point of conflict between the monetary authorities seems to be in the method of comoatting the inflationary forces, since the debt retirement program results in a decrease in deposits, which is deflationary.

The effects of the refunding operation through the retirement in cash of maturing and called obligations held by the commercial banks, the largest owners of these securities, will be a decrease in their positions in these issues, as well as a decline in deposits or war loan account. . . . The reserve position will not be changed since no reserves are required against Government deposits.... This part of the refunding program will not have any material effect on the money markets. . . .

CREDIT BASE NARROWED

Retirement of the obligations held by the Federal Reserve Banks will not only reduce deposits or war loan account but also reserve balances of member banks. . . . This will mean a narrowing of the credit base which could bring about some stiffening of money rates particularly in the shorter-term classification. . . . The money markets will be affected by this part of the debt retirement operation, through the loss of reserves. .

The elimination of securities held by non-bank investors does not bring about any change in deposits. . . . While war loan account will be decreased other deposits will be increased. . . effect from the standpoint of the money markets is that required reserves will be larger since it is mandatory to keep reserves against individual deposits, compared with none for Government deposits.

. . This tends to narrow the money markets because of the larger required reserves. . . . Likewise cash resources of non-bank owners seeking investment will be increased, and these funds may be put to work in outstanding issues. . . . This could result in further depressing the yields of these obligations. . . .

The liquidation of the war loan account to meet the Government deficit through June 30, 1946, will probably add \$3,000,-000:000 to \$4,000,000,000 of deposits to individual accounts, which will increase the reserve requirements of commercial banks. . This will narrow the money markets by enlarging the required reserves of the banking system. . . .

POLICY OF CENTRAL BANKS

Whether there will be a moderate tightening in the money markets because of the refunding operation and the meeting of the deficit out of Treasury cash balances depends upon the open market operations of the Federal Reserve Banks. . . . If the Central Banks do not purchase obligations to add reserves to the banking system to make up for those lost through the coming operations, then there will be a minor firming of money rates. . . . If this should take place it is likely that short-term rates will harden, which could bring about a 1% rate for certificates of indebtedness. . . . This would most likely indicate that interest rates have started to round off. .

It would also mean that the scramble for intermediate maturities of bank eligible obligations would be over since it is unlikely that the deposit institutions would continue to buy issues due in five or six years, that would give them less than 14 of 1% more income than would be available in one-year obligations. . .

On the other hand, if the Federal Reserve Banks through open market purchases make available to the member bank sufficient reserves to offset those lost through debt retirement and use of cash resources to meet the deficit, then there will be no change in money market conditions. . . . The demand for bank eligible issues will be greater than ever and lower yields can be expected since there will be less securities that these institutions can buy. . . .

That the Federal Reserve Banks have been doing a good job in offsetting the return flow of currency and the increase in gold holdings is shown by their action in counteracting the change in trend in these two money market factors. . . . Since Dec. 26, 1945, when the peak for currency in circulation was reached the decline up to Feb. 20, 1946 has amounted to \$694,000,000. . . . Gold stocks during that period have increased by \$168,000,000, with last week's addition totalling \$76,000,000. . . . Together these two factors, which add reserves to the money markets, have amounted to \$862,000,000. . . decline in holdings of Government obligations by the Central Banks than neutralized the forces that would have added to the reserve positions of the deposit banks. . . .

REDUCING DEPOSITS

The retirement of matured and called obligations by the Government through use of Victory loan cash, indicates a desire to reduce deposits without increasing the debt burden. . Federal will be able to convince the Treasury that deposits should be reduced through the sale of long-term obligations to ultimate investors, which would increase somewhat the debt and interest charges, remains to be seen. . .

Nevertheless, the offering of a long-term 21/4% bond due in 1970 or 1980 would reduce deposits and would stop the sale of bank eligible issues by non-bank holders. . . . This would help the bond market and reduce bank deposits without the commercial bank acquiring more Government obligations.

Also by allowing short-term rates to stiffen somewhat the pressure of bank funds seeking investment in intermediate-term obligations would be relieved and the prices of these issues would not be driven too high. . . .

MARKET CAUTIOUS

Many of the large institutions and dealers are on the sidelines pending developments in the refunding operation and clarification ing relief, in collecting taxes

of reports of new money offerings in the Fall. . . . Non-bank investors continue to add somewhat to their holdings of the longest restricted bonds, although volume of trading has not been large. . . . Intermediate maturities of bank eligibles still seem to be in demand. . Many believe that the immediate trend of prices in Government obligations from here on will be determined largely by the policy that Federal adopts in its open market operations. . . . This has resulted in a cautious attitude toward the market. . . .

Total Market Value of Stocks and Bonds on Curb in 1945

Total market value of all stocks traded on the New York Curb Exchange at the close of 1945 advanced \$3,183,990,580 to a total of \$14,360,033,569 said the Exchange's report of Feb. 9 which continued: Average price per share for each of the 863 issues was \$22.73 as

against \$17.91 in 1944 when 883 stocks were traded. Shares outstanding increased 7,945,538 to 631,714,861, the report said.

Average price per \$100 pa amount dropped \$388,695,911 to value of the 138 issues traded showed a decline of \$366,938,213 to \$1,783,444,315. At Dec. 31, 1944 there were 163 bond issues, listed

and unlisted, traded. Market value of listed common to \$2,831,624,472, and the average price rose \$5.46 to \$13.56 with an increase of nine in number of such issues to 341 and an increase of 19.310.696 to 208,741,506 in the outstanding amount. Listed preferred issues had a similar trend, with market value up \$50,797,625 to \$496,769,619 and average price improved by \$6.61 to \$55.06 while their number was 6 less at 84 and the outstanding amount was off 182,793 to 9,021,452.

In the unlisted common stock section, market value advanced \$1,856,985,076 to \$9,125,470,999 and average price rose \$5.20 to \$23.80. Number of issues here dropped 11

value of bonds was up \$.58 to Unlisted preferreds had a market \$97.67 while the outstanding value of \$1,906,168,479 off \$20,-327,023 under the total on Dec. 31 \$1,825,914,909 and total market 1944 and an average price of \$62.16 which was \$6.28 ahead of that in 1944. Number of issues declined 12 to 129 and the outstanding number of shares was off 3,811,927 to 30,663,435.

Regarding the market value of stock issues was up \$1,296,534,902 listed bonds in 1945 the advices from the Curb Exchange states: Listed bonds showed a \$27,680

371 decrease in market value to \$331,932,926 and an average price that was \$1.65 better at \$105.26. The outstanding amount of the 22 issues (one less than the close of 1944) was \$315,335,435 or \$31,718,-100 below that in 1944.

Unlisted bonds had a market value of \$1,451,511,389 which was \$339,257,842 under the 1944 total. An average price of \$96.08 reflected a rise of \$.20. The 116 issues in this group showed an outstanding amount of \$1,510,579,474 a drop of \$356,977,811 under 1944 to 309 and the outstanding amount when 140 unlisted bond issues was 7,370,438 lower at 383,288,468. were traded.

Ohio Municipal Comment

(Continued from page 1101)

upon an inability to fill a demand that is tremendous and is apparently backed with plenty of purchasing power.

Such general economic conditions may have contributed more than we realize to a complacent acceptance of the notion that all is well throughout the economic and monetary system—that all is rosy and will not soon take a turn for the worse. Much of the current talk is reminiscent of the predictions heard in the late twenties. that we "are in a New Era of last-ing prosperity." In any event In any event there is an interdependence between the confidence now held in general economic conditions over the near future, confidence in the credit of practically all municipalities and confidence in the present low money rate structure.

The danger is that such general confidence actually has caused the public, investors included, to fal into a state of lethargic compla-

Complacency Is Dangerous

One of the benefits that might stock prices, should it ever terialize, would be the possibility that it might shake us out of our not shake our confidence to any degree, but it may cause some investors, at least to reappraise the future outlook of business, the future of certain municipal credits or the advisability of buying very long term bonds at present high

It seems logical to conclude that if anything seriously impaired our general confidence in any one of these considerations, our faith in the others would be shaken. Finally, should our confidence in the future of business be seriously impaired, it is likely that we would once again give some thought to the problems which municipalities would be called upon to face in financfrom unemployed taxpayers, in meeting heavy obligations at a time when revenues would not be so abundant as they are today, and these thoughts, in turn, may give rise to questioning the advisability of considering all municipal bonds "good."

Supply of Bonds Lower in February but Higher in March

Prices continue to rise in the Ohio municipal market, almost with an abandon such as mentioned above. The supply of Ohios has been small during the past month. The year 1946 started with more new issues of Ohios scheduled for sale in January than this market has seen for several years. Issues were sold generally at higher and higher prices as the year moved along. In February fewer issues were marketed, but it appears that the supply, at least in number of issues, will increase again in March. It is too early to say whether or not this increase in supply will continue. One might expect more bonds to be sold in the spring, as weather conditions become more favorable for conaccompany a sizable drop in struction. However, the dearth of building supplies may well mean that many issues will not be sold complacency. Perhaps it would until such time as supplies are more easily available for public construction.

New Officers for Ensuing Year

SYRACUSE, N. Y .- At a recent meeting of the Bond Club of Syracuse, the following officers, shown in the accompanying photograph, were elected for the ensuing year:

Alvin G. Hageman of the Syracuse Savings Bank, Treasurer.

Ernest R. Mulcock of E. R. Mulcock & Co., Inc., Vice-President.

George W. Mason of Halsey, Stuart & Co., President.

Marshall W. Day of George D. B. Bonbright & Co., Secretary.

Wesley M. Bishop of R. H. Johnson & Co., Horace F. Candee of Carl M. Loeb, Rhoades & Co., and Everett W. Snyder of E. W. Snyder & Co., were elected to serve on the Board of Governors.

(Special to THE FINANCIAL CHRONICLE)
SOUTH BEND, IND. — Charles Landis and Robert Sweeney have **Evils of Compulsory Military Training**

(Continued from page 1089) most army officers. I have analyzed the problem of compulsory military training carefully and impartially. I am convinced of the soundness of my views, and believe that it is my duty to bring them to the attention of the people of the country.

After studying the problem, and after listening to the representatives of the War Department I am depressed and appalled that the army seems to have learned little during the past 30 years. I am unable to find a single argument presented by the War Department in favor of compulsory military training that will stand up under close scrutiny. I shall present my conclusions under five headings:

Does Not Assure National Scrutiny

The first is the STRICTLY MILITARY VALUE OF THAT TRAINING. This program will not assure our national security. In its approach to this problem the army is running true to form. It is always one or two wars behind in its thinking. World War I had been going on for three years before we got into it, yet we were unprepared with any new techniques and had to rely upon the British and the French to teach us how to fight that war. came out of that war with the nucleus of a revolutionary new weapon-air power-but for 20 years the army fumbled its po-tentialities. We had, in General Mitchell, a man of genius who called the turn, even then, how air power must develop. We had the engineering genius and the productive capacity to develop the best planes in the world. Under the leadership of Congressman Collins we had developed the flying fortress which constituted a. new, long-range weapon of great power. Our young men took to flying like ducks to water and we could easily have developed a reserve of fifty thousand or more pilots at our universities, as we did later, but too late. We had an unlimited potential reserve of mechanics. We had an unlimited supply of gasoline for training purposes which other nations lacked. Had the army possessed the vision we might have out-Goeringed Goering, and have developed a striking force of such power that war might have been avoided entirely, or at least have been brought to an earlier end. But the army leadership fumbled the situation, eliminated General Mitchell, shackled air power to the foot soldier, committed itself to action on mass armies, and thereby served notice on world that it would take us two or three years to build up a mass army if war should come. committed ourselves to the wrong kind of war. That was the first failure of our military policy, and full responsibility rests on the army, and not on Congress or on the people.

The Effect of the Atom Bomb

131

Again we have developed a new weapon in atomic power, and again the army returns to the same techniques that it taught after World War I. The develop-ment of the atomic bomb constitutes a revolution in military science more sweeping than the invention of gunpowder. All of our preconceived ideas have been rendered obsolete, and must be re-evaluated in the light of the new weapon. General MacArthur is reported to have stated that an army of 100,000 men, using the new weapons, would be adequate for our security. General Arnold has stated repeatedly that the atomic bomb makes obsolete even the air power developed during the war. The navy has not even determined whether the bomb has made battleships obsolete, and cannot know until tests will require more and more three times that number. It is form of democratic control has

some reason to believe that the battleship is obsolete even with-out the atomic bomb. The army has had no opportunity to adjust its thinking to all of the implications of the atomic bomb. There is no evidence that it has made a formal "estimate of the situa-tion"—no thorough military analysis of the problem. It has not had time to determine the nature of the new weapons that will be used in the future, nor the techniques for their use, nor the training doctrines to be adopted in such techniques, nor, consequently, the total man power necessary to service such weapons. From its own evidence it is planning on running men through its training camps, teaching them the use of the bayonet and the rifle, the operation of combat teams and all of the paraphernalia of the techniques of World War II, when it should be apparent to anyone that World War III will not conform in any sense to World War II.

National Security Not Decided by Army Alone

As a matter of fact, the prob-lem of national security cannot be decided by the army alone, nor by the navy alone, nor by the air force alone. Congress is now considering legislation for some kind of unification of the three forces. The problem of national defense cannot be decided effectively until such unification has been completed. We must de-velop a new military policy based on the new weapons and integrated with our international pol-The problem cannot be decided piecemeal, as the army is trying to do, but must be decided by Congress through the combined efforts of representatives of the three forces, our scientists, our educators and our industrialists. The army has looked in the back of the book, put its finger on the same old answer "compul-sory military training" and is trying to work the problem backward to force that answer to fit the problem of the atomic bomb. As a matter of fact, not only is that not the right answer, but the problem is no longer in the same old book. Before any of the basic factors of the problem have been determined it demands that Congress and the people of the country sign a blank check, to be filled in at its own discretion, and to any amount down to the last American boy. Why is it in such a hurry? We have an ample reserve to serve until the problem can be solved intelligently. enemy is about to strike us. We can only conclude that the army is trying to railroad this legislation through on a wave of postwar hysteria.

The entire pattern of training presented in the War Department program is identical with the one it used to fight World War II.

Manpower Not the Answer

weapon the greater the manpower If we carry that argument to its logical conclusion, perhaps with the atomic bomb, death rays, and bacteria as weapons, every man, woman and child in the country may have to be put into uniform, and the entire country be subjected to compulsory training.

It argues that wars have always been won with foot soldiers and will always be won with foot soldiers. This is a doctrine as dangerous as the "Maginot Line" complex which led to the undoing of France. Let the army remember that millions of Japanese foot soldiers, some of the best fighters of the world, were by-passed in China and never fired a shot, because air power had already defeated Japan.

It insists that the new army

have been completed. There is skilled technicians, and then proposes to siphon off our students from universities, and our technicians from industry, and to transfer them to training camps to teach them rudiments of training of a foot soldier, or such limited techniques as could be taught in camps. It did the same during the war when it emasculated our school system by withdrawing medical and technical students from their college training, only to scatter them far and wide, at other institutions and at government expense, with resultant confusion and destruction in the continuity of such training.

It speaks of a technical army but forgets that the 18-year-old boys have no technical training, that most of them have not determined at that age what their aptitudes and interests really are, and that concentration on army techniques may interrupt, rather than facilitate, the development of the individual specialties that they would require as citizens or as soldiers. The insistence on training 18-year-old boys is a carry-over from the feudal era when all that was required of a soldier was the ability to march. to shoot a rifle, to ride a horse, or to handle a saber. The concept has no reality in training a tech-nical army, in which men of greater maturity and broader experience would be more valuable than the 18-year-old boy. The bulk of the training received by such boys would be wasted after their return to civil life when they had developed specialties connected with their civil occu-

Even the layman can grasp the fact that the next war—if there is a next war-will be sudden, short and devastating. The army asks for a force comprising "strength in being," and "immediately available." The proposed program will give neither. The terms are relative. If we have not time to train an army after war starts, as the army rightly contends, neither have we the time to mobilize mass armies trained by the system, nor to retrain them in the latest techniques, nor to transport them to any battlefield anywhere. There will probably never again be battlefields" in the old sense. we are attacked we may never know who hit us. The attack will come suddenly, probably by sabotage. Like the victim of a freefor-all brawl, we will sit amid our ruins and demand "who threw that brick"? Our only defense would be retaliation in kind, and immediately, and if we cannot discover who the attacker was we will be utterly helpless. The mass armies trained by the proposed program would be completely bypassed as the Jap armies were in

If we are to defend our country under future conditions it seems reasonable to suppose that we It presents the fallacious argu- shall need two types of trained ment that the more terrible the men. The first type would be in the nature of a military police necessary to service the weapon. force for the occupation of foreign territories. These could be trained by the Regular Army or the National Guard without compulsory military training. The second would be a small, highly mobile, highly technical, tremendously powerful striking force, using the newest types of weapons. That force must be in existence, constantly alerted, sleeping on its arms, as of now.

A reserve force of air power of fifty thousand pilots and mechanics, with planes to back them up, might have been all we needed in 1941. A reserve force of as many, trained in the new techniques, might be all the country requires now. Perhaps the estimated strength of 100,000 attributed to General MacArthur will be ade-

obvious that we cannot use a re- even been tried. There is certainserve of from six to ten million men for any such force. We cannot know until detailed studies have been completed. The army is going off half cocked.

Army Not Democratic

My second reason for objecting to the program has to do with the PRESERVATION OF OUR DEM-OCRATIC INSTITUTIONS. have fought our wars for the preservation of democracy and personal freedom, and the army has been the means to that end, and not the end in itself. If we are sincerely interested in the preservation of democracy must be convinced that democracy will be strengthened by the program, and not weakened.

The army has not looked at itself in the mirror for 150 years. The country has never taken a close look at the army. Such a close look will show that the army is an anachronism. It is a feudalistic organization carried over into the atomic age. It has inherited most of its feudal concepts from Baron Von Steuben, the Prussian drillmaster in Washington's army, and the rest from the British Army. Our navy is in about the same situation.

The army's most prominent characteristic is its medieval caste system, which sets up unsur-mountable barriers between the officer aristocracy and the en-listed man. This is not an aristocracy by birth, but by act of Congress. It teaches blind obedience to orders of an aristocratic ruling class. It promotes class consciousness and class cleavages. It creates bitterness from one end of the army to the other. It is undemocratic and un-American.

The army's judicial system is not a system of justice at all, but a system of military discipline and punishment, carried over from the days of Gustavus Adolphus by way of the British Army. Under this system the commander is often accuser, judge, jury, court of appeals and executioner. The enlisted man, who as a civilian in our democracy can sit on a jury to try his fellow-man, and can be tried by a jury of his peers, cannot sit on a military court, and must submit to trial by a "packed" court of officers, who are interested primarily in military discipline and only incidentally in abstract justice. The court procedures are inherited from the feudal era, and the "brass" and au-thority are frightening. If convicted of even a minor offense our American boy suffers the humiliation of being herded around the military reservation on menial work, by another American boy carrying a loaded gun. The Georgia chain gangs had nothing more humiliating to offer. The army is beginning to see dimly that all is not well with its system of justice, and proposes a modified form for the trainees. But why have two different standards of justice, one for the GI and the other for the trainee, when both are American citizens living under the same Constitution?

The basic philosophies of our army leadership are as autocratic and absolutist as their techniques of control. The army speaks the language of democracy, but it has little understanding of the spirit of democracy, and has developed no techniques for the practical realization of democracy. The army leadership is class-conscious, ultra-conservative, absolutist. The individual has no entity but exists to serve the machine. It is significant that this bill is, itself, being superimposed upon the army by the army autocracy, and not by the GI. The training program of the army is no more democratic than Hitler's compulsory training program was democratic. It is not democracy but regimentation. It will result in the standardization of our American youth.

It may be argued that an army cannot be democratic. That arguquate. Perhaps we need two or ment is open to question, as no

ly a broad area in which new concepts of democracy might well be tried. Certainly, if the machinery of control over the army is nondemocratic, and if the indoctrination of the army under our totalitarian leadership is non-democratic, there can be little hope that democracy will survive. Totalitarianism has no geographical frontiers. It is a disease that can flourish anywhere. The army as at present constituted, with its caste system, its feudal concepts of justice, its reactionary philosophies, and its lack of understanding of democracy offers an excellent breeding ground for totali-tarianism. At the end of the course of training our boys will have less understanding of democracy, instead of more.

Begin Program at West Point

At this point I feel compelled to state that any program designed to infuse a degree of democracy into the army must begin at West Point. I am a graduate of West Point, and my son is also a gradu-ate. I am deeply grateful for all that West Point has done for me. I am deeply conscious of the high idealism of its graduates, and of the inestimable services rendered its leaders. Nevertheless, 1 would be failing in my duty if I did not point out that at West Point are perpetuated and inculcated the army caste system, class consciousness and class barriers, blind obedience to an officer aristocracy and absolutism. From West Point these extraneous philosophies permeate the entire mili-tary establishment. This is a condition which must receive recognition when our military policy is under consideration.

Do Not Need Army as a Reformatory

My third objection to the army training program is based on concern over the OVER-ALL EF-FECTS OF THE PROGRAM ON THE YOUNG MEN OF THE COUNTRY. Our army leaders are trying to sugar-coat the pill. They are trying to sell us a pig in a poke, by emphasizing the byproducts in education, health, recreation and discipline. This raises a basic conflict in attitudes which the army cannot resolve. The army is not, and cannot be, a benign, socially-conscious institution acting as god-father to our youth. This is no youth movement. Our youth can learn to clean their teeth, do third grade arithmetic, or the meaning of true discipline, in our homes and in our schools. We do not need to turn the army into a reformatory for the standardization of military discipline.

An army has only one purpose to kill. Its training program must be directed toward teaching how to kill, by the most effective and brutal means. Anything else is pure eye-wash. Every man graduating from that program must, if the training is effective, bear the indelible stamp of the army's major objective to destroy. Not only must he be taught to kill but he must think of killing someone. Killing cannot be accomplished in a vacuum. Some potential enemy must be kept before him.

The army has no social techniques and no social responsibility. Army camps have been army camps since before the days of the Greek Phalanx. The restraints that our boys find in their homes, in their schools and colleges, and in their social environment, do not exist in army camps. They would be uprooted from their normal environment and transplanted to an environment totally foreign to our social structure. There they would be placed under the tutelage of regular army men, fine soldiers, indeed, but much older than themselves, many of whom had endured the hardening process of two wars, and who at best have acquired a certain mature cynicism which sets them apart from the rest of our population. (Continued on page 1120)

Evils of Compulsory Military Training

These are the men who would be In intimate contact Witts O.

ees. The commanders, under our caste system, are too detached from the men to influence the shaping of their characters except in the direction of command and

absolutism. The responsion the commander for the morals of his men extends to the lectures on the evils of venereal diseases, making contraceptives easily available, to providing prompt prophylaxis, and to punishing those who fail to take such treat-The chaplains labor diligently to safeguard the morals of the men, but they can serve only the minority who come to them, whereas the influence of the military environment is constant: Such disregard for morality may be excusable in time of war when death is imminent at any moment, but it is hardly the environment in which we propose to condition our youth for a full year of their lives. The establishment of a group of civilian advisors in the Pentagon Building, or of educational advisors at the camps, as the army proposes, cannot be a substitute for the normal social environment in the home, the school and the civil community.

Will Not Develop Initiative or Personal Responsibility

Parents and school authorities are eager to develop within our boys during their formative years a sense of personal responsibility and initiative as they approach manhood. In the camps every hour of the day would be regulated, every activity would be "by order," all need for independent thinking would be eliminated. The sense of personal responsibility and of initiative required in civil life, would have little opportunity. develop. At the end of the training they would be less well prepared to fit themselves into their civilian pursuits, instead of better prepared, and would require a period of reorientation to break them of their habit of leaning on "superiors" for orders.

For all of its emphasis on scientific psychological testing and classification of personnel, the army has little to be proud of in its actual war record. At a time when all of these procedures were in operation and were well understood, and when technically trained men were at a premium, the army wasted as much as 50% of its skills. The system was no better than the men who had to make it work, and much hostility and indifference to scient

sonnel procedures has always ex isted in the army. The army used the excuse of "military recess ty, It is too much to expect that army has suddenly referred. For all of its techniques it will still waste men.

If we wish evidence of lack of interest by the army in the welfare of our 18-year-old boys, we have only to remember how the army broke faith with the people of the country and with these boys, by shipping them to battle even before they had completed their basic training, and after it had promised that they would be given a full year's conditioning before being committed to action. That breach of faith was inexcusable. Again the army tried to excuse it on the ground of "mili-tary necessity," but "military necessity" covers a multitude of sins.

Driving a Wedge Between People and Army

There is another phase of this conditioning at army camps that should be investigated. The United States is entering a critical period in its history which, if widespread disorders are to be tional unity, and our spirit of co- states that it does not make na-operation. During the depression tional policies, yet it is trying to

301 . 4 nc 3 n 10 3

Mass armies, while assistance. useless for foreign wars, are ideally suited for the suppression of domestic disorders. The army never had confidence in the Nacional Guard for such duty, beclose to the people to be considered reliable. Now the army proposes to train manpower for the National Guard and the Organized Reserves in its own absolutist philosophies, and a new type of reservist will be developed. wedge will be driven between the people and the military. I believe that the people of the United States have a right to demand to know whether the real purpose behind this program of compulory military training is to place weapons in the hands of our 18year-old trainees to suppress the veterans of World War II who fought for the four freedoms.

The training program will unquestionably produce a different type of American citizen. It is an appalling thought that eventually our entire adult male population will have been subjected to this conditioning process. What qualities does the army possess that it lares offer itself for the task of emaking our American youth? Knowing the army for what it really is, I insist that we dare not turn our youth over to such leadership as it is now constituted without grave danger to our American democracy

Endangering International Peace

My fourth reason is based upon the INTERNATIONAL ASPECTS OF COMPULSORY TRAINING. in the first place, we now appear on the stage as the villains of the plot. We now stand out as the militaristic nation. We have large forces still under arms and have great reserves of man-power and materiel. We have held bases all over the world pointed at the heart of other nations. We have troops in Germany and Japan, where we are in contact with both British and Russian imperialism. We used the atomic bomb when Japan was already defeated and here was no longer any justificaion for its use-the most coldblooded attack in the history of he world, and one that we will renember to our shame. We give every evidence of being willing to use it again if it suits our purpose. We have built up the fiction that we are a "peace-loving" nation, when as a matter of fact we have had an uncanny knack of getting nto every big war that has come llong. Now at a time when the Inited States should assume a noral leadership among the naions of the world, our army proposes that we serve notice on the world that we intend to arm every ale in the country. We, the great 'peace-loving" nation, brand ourselves as hypocrites and liars. We tart a race in armaments all over again, and lay the foundations for World War III which our army is already talking about.

In the second place, such a rearmament race is futile. It can be compared with the decision to keep our fleet in Pearl Harbor, where it was an easy target for the enemy, and fooled no one but purselves. Mass armies trained by this program will fool no one but ourselves. We merely serve notice on the world that we have, for the second time, committed ourselves n advance to the wrong kind of armament program, which will give all of the advantage to the

The Training Would Be "Boondoggling"

My final reason is that THIS a foided, will require all of our PROGRAM, EVEN IF PASSED, statesmanship, our sense of na IS UNENFORCEABLE. The army of 1929 the army gave much at- force through this program which

pression of internal disorders. of American life. The people gen-Another such period may be upon erally have had no opportunity to us, if reason does not come to our learn the truth. Many organizarepresenting millions of tions members are strongly opposed to Each year a million boys, backed by millions of parents and relatives, will resent the compulsory draft, especially if training is known to be unrealistic for a modern war, and becomes little more than "boon-doggling." We may expect many draft evasions, and many A.W.O.L.'s and desertions. The program will be more difficult to enforce than Prohibition. The American people resent compulsion. Resistence to compulsion will result in another breakdown in law enforcement. How far is Congress prepared to go in forcing this program upon the people in the face of certain resistance? Public opinion simply will not back it. The army must find another solution for the problem of national defense.

If we adopt this army program, therefore, we defeat the very ends it is intended to accomplish. We fail to achieve security, we waste our resources, we waste the lives of our 18-year-old boys, we jeopardize democracy, we transform our entire civilization into something we have considered un-American, we set up a system of compulsion which our citizens will not support, we shackle ourselves to an obsolete military philosophy, and we pave the way to an-other war. We gain one advantage which has not been mentioned, but which may be in the minds of some of our leaders. As suggested by General Hershey, it is better to keep men in the army than to keep them in bread lines or on a dole. Perhaps this is what the army has in mind.

It is appropriate at this time to say a word about the alternative proposal of the American Legion. If the army hasn't thought its way through the problem with all facilities available, how could it be possible for the American Legion. which has neither information nor responsibility to think its way through? Its proposal has all of the defects of the army program, and some of its own. biall of

The National Guard almon

The proposal to use the National Guard as a training cadre is unsound. The National Guard can still train a military police force for home defense or occupational duty, or it may even cover a limited field of training for a striking force, but it cannot furnish technical training, on a mass basis, under a system of universal service. Technical training cannot be conducted on a blanket, geographical basis. Any particular area will contain men with a great variety of skills, many of which would be desperately needed elsewhere, and the scattered Guard units would be able to furnish training for more than a small minority of such skills. To make the situation more difficult, the shifting nature of our population would progressively break up any course of training which individuals had undertaken, as it would be rare that they could continue such training at their new location. This is the weak spot of the entire proposal. There are many other weaknesses. We would force boys in distant farm or ranch areas to travel great distances, in snow or rain perhaps, to meet particular Guard training schedules. would be setting up class legislation by giving the advantage for reserve commissions to those who could afford college training. We would force the average American boy who could not afford college, or who could not take training in the Guard, to join the regular army, where, as a matter of fact, he could not depend on receiving the proper technical training for a future war, since the army is not organized to do that job. Again the Legion is trying to rank alone.

tention to training for the sup- will change the entire complexion force the wrong answer without

in the first of the to the the first of the facine

having read the problem. The purpose of the Legion proposal is not to preserve the United States; but is a political move to preserve the National Guard and the Organized Reserves. It has become a race to see who shall run the new conscript army, the Regular Army, or the National Guard and the Organized Reserves backed by the power of the Legion. National defense is being kicked around like a football, by the "ins" and the "outs" who are struggling for supremacy.

Restudy National Defense

The Veterans League of America which I represent, demands, therefore, that there be a complete restudy of the problem of national defense and of our military policy, by a commission representing the army, navy, air forces, scientists, educators, and industrialists. We offer the following program:

(a) Any military policy which we adopt at the present time must be designed to serve only during the period of transition to a new world order, and must facilitate that transition. As a first step we insist that our government initiate action to abolish conscription in all countries of the world and thus relieve the threats to peace inherent in conscription, and at the same time remove the tremendous tax burdens which compulsory training will impose on the country.

(b) Believing that another world war will mean the suicide of civilization, we demand that warfare be outlawed hereafter. ind not merely the weapons of We support the developvar. ment of a stronger world organization, on the foundations of the Nations Organization. United which will be responsible, exclusively, for the development and use of the atomic bomb and other weapons of terror and destruction, with power to cross frontiers to prevent violations. We recommend that these weapons be publicized by radio, newspapers, motion pictures, and public demonstrations to convince the peoples of the world that another world war means world suicide.

(c) Since peace must rest on law, we recommend that as one means to secure peace, an international court, based on the pre-cedents set by the Neurenberg trials, be established before which may be indicted, tried and punished, in advance, all citizens of all countries-army leaders, radio commentators, newspaper editors, industrialists, leaders of special groups, etc.-who incite to war, just as we punish those who incits

(d) Agreeing that we must assure our national safety until the new international order is established, we recommend that our forces be reorganized to make use of all of the newest weapons-the atomic bomb, air power, V-bombs We insist, however, that all new developments be publicized, and held in trust for the new international organization until such time as it is established. Secret competition in the new weapons of terror can only lead to suspicion and certain war.

(e) We recommend that the reorganization of the army itself proceed along the following general lines:

1. Determine from the techniques required for using the new weapons the minimum force required, and recruit such personnel through voluntary enlistment.

2. Organize the personnel thus recruited into a new striking force of trained experts.

3. Eliminate all caste differentiations between officers and enlisted men, and organize them into a homogeneous corps of specialists, with a clear channel of promotion from bottom to top.

4. Such heirarchy of authority as would be necessary to rest upon demonstrated ability and positions of responsibility, and not upon

. Lacorganize West Point and in war.

R. M. Stewart Heads **Development Company**

The election of R. McLean Stewart as President of South American Development Co., Inc., Established in was announced.

R. McLean Stewart

1896, the company owns and operates extensive gold and copper mining properties in Ecuador and in British Columbia. principal offices are in New York. Mr. Stewart, who has been a Vice President and Di+ rector of Harriman Ripley & Co., Inc., for the past several years.

has resigned from that company and, after March 1, will devote all of his time to the affairs of South American Development Co. and its affiliated enterprises including Cotopaxi Exploration Co. and Kelowna Exploration Co., Ltd., of which he has also been elected President.

other schools of the army system into a coordinated training cadre for the design, production, supply, administration and operation of such a highly technical corps.

6. Eliminate the sadistic, de-grading, sophomoric Plebe system and the caste system at West Point.

7. Integrate the army training program with training at schools and colleges, and in industry, to assure as little interference as possible with normal activities of individuals.

8. Establish at school and colleges, civilian as well as military, instruction in the underlying spirit of democracy and in democratic processes, according to doctrines developed by our educators, enlightened citizens, representa-tives of the people, and students themselves. Requrie all military personnel to participate in such training.

9. Establish a new system of military justice by setting up permanent courts entirely apart from the military heirarchy of com-mand, staffed by trained judges, following enlightened laws, with expert counsel furnished the accused to protect his rights. Require that commanders as well as subordinates be summoned before such courts for violations of basic principles of justice.

10. Establish pay schedules attractive enough to offer a career to those individuals who are recruited for the military corps.

11. Make such use of the National Guard as may be practicable as part of the striking force. Reorganize the National Guard otherwise as a military police force, and as local defense and fire and bomb wardens, to maintain order locally if we are subjected to an attack from without.

Such a military organization would, indeed, be a new "regular army." It would make a military career so attractive that there would be no need for compulsory military training. It would elim-inate the last vestige of feudalism in the army, and transform the army into a real "people" army, indoctrinated with the spirit of democracy, justly administered, and adequate for national defense during the period of transition to the new international order. It would prepare the way for the easy transference of its potentialities to the international organiza : tion, contribute to the final out. lawing of war, and provide training in the new sources of atomic power for use in peace instead of

From time to time we hear also that there are men in OPA who, because of their social philosophy, want price control to become permanent. On that issue I am certain that a vote among top OPA executives would be as unanimous as a vote on the subject taken here tonight. There would be no votes for permanence.

When Should Controls Be Removed?

On one issue, and only one issue, might we be in disagreement; that is as to the time when controls should be removed.

The very powerful National Association of Manufacturers last November voted for removal of all controls by February 15. . that was a week ago last Friday. The Association is now spending a sum reported by Drew Pearson to be two million dollars, trying to persuade the American people, through advertising, that it is in their interest that price controls be ended at once. I am very certain that if their fund amounted to twenty million, their advertising campaign would be a failure. In a quarter of a century spent in advertising, I learned one important thing: to advertise successfully you have to have something that will serve the public well if it is purchased. The NAM doesn't have a salable product. The American people are not in the market for economic tragedy.

If economic history teaches us anything it makes crystal clear that inflationary pressures do not end when war ends. In World War I, without price control, living costs rose 62 per cent; but after the Armistice, in spite of the unrestricted inflation that had taken place during the war, consumer prices went on up until in April, 1920, they were 108.5% above prewar levels. Forty-three per cent of the total inflation came after the Armistice.

Business men were extremely well satisfied during the rise. In addition to making operating profits, they got inventory profits that made their operating profits hardly worth looking at. Imagine having your inventories grown 40 to 50% in value in a year and a half. All you needed to get rich was a big inventory.

When prices rise on war's inflationary pressures, however, they never stay up. And in May, 1920, they collapsed, bringing our whole economic structure down about our ears. Prices fell over 40% in 13 short months. And what a cost the American people paid for the

postwar inflation! Corporation profits of 6 billion 400 million in 1919 turned to losses of 55 million in 1921, and in the next five years, 106,000 businesses failed-40% more than had failed in the last five years before the war. Business bank-ruptcies were at the rate of 20,-000 a year. By way of contrast, I may say that in 1945, amid the widespread hardships created by OPA, just 810 businesses failed. If you doubt these figures, consult Dun and Bradstreet. It is they who keep the records of business

fatalities.

44%. And unemployment increased by 5,624,000 just when the nation needed to absorb discharged veterans in civilian jobs.

Building costs rose 145% in two years, resulting in a buyers' strike and the postwar building boom lasted only one year. Over 400,000 families in the meantime had bought or built new homes at highly inflated prices, and great numbers lost their homes, and with them their wartime savings, through mortgage foreclosures.

Patriotic people who had bought Liberty Bonds to "help keep the world safe for democracy" and all owners of savings accounts saw their holdings drop 40% in value in two short years.

Farmers, however, were hit hardest of all. Farm prices collapsed. Potatoes, for example, that sold for \$6 a bushel in May 1920, sold for \$1.25 a bushel one year later. Cotton, that sold for 371/2 cents a pound, one year later sold for 91/2 cents. Average farm ncomes dropped from \$1,360 in 1919 to \$480 in 1921.

In the heyday of the inflation, farmers were next door to heaven. As money rolled in they built the extra rooms on their houses they had wanted so long, or erected new silos or barns. Many reached out and enlarged their acreage. With money flowing in, it would take only a few years to pay off the mortgages they placed on their farms to get the needed cash.

Result: In the next five years, 453,000 farmers lost their farms through mortgage foreclosures.

If those were just statistics it would not matter; but wrapped up in them was stark tragedy for millions of Americans. Imagine the sleepless nights of worry spent by the 106,000 business men who failed, and by the hundreds of thousands of others whose profits turned to losses; by the 5,600,000 extra unemployed; by the workers who kept their jobs but saw their incomes shrink 44%; by the 453,000 farmers and their families who saw not only their homes but their jobs go out of the window, because of forces over which they had not the slightest control.

No thank you, Mr. Wason, of the NAM, the American people would not buy your bill of goods if you had a hundred million to spend convince the American people that it would be to their advantage to go through that kind of a wringer again.

Would we go through a wringer again if we followed Mr. Wason's advice? Let us examine the probabilities.

Present Situation

The war that put the American people through the wringer in war 1919, 1920, and 1921 cost a total of end. \$32 billions. The recent war cost \$301 billions—almost 10 times as much. The truth is that our military expenditure in the first year after V-J Day will total \$41 billions, or \$9 billions more than the total cost of World War I. And yet some people tell us the war is over and we can with blithe spirits throw off the obstacles of controlled prices and return to normalcy.

"Normalcy" - remember that word? Remember what happened OPA restraints." when we returned to it last time!

During World War I, currency in circulation, under the stimulus of war financing, rose from \$3.1 billion dollars to \$4.9 billions—a lation rose from \$7.2 billions to rise of World War I.

Balances in checking accounts in stayed at a very high level. banks-the foundation of our other form of money—rose in World crop of white potatoes, we were scales.

War I from \$10.1 billions to \$14.8 able to remove ceilings without Workers are now crifting tack

was not confined to businesses, lions. In World War II, they rose almost 12 times as much as in World War I.

The public's spendable income in the last six months of 1945 was at the rate of \$132 billion a year, up 91% from \$69 billions in 1939. In the last war the public saved a total of \$27 billions. This money, hanging over the market, was an mportant factor in forcing prices still higher, when consumers became convinced that inflation had not ended with the war's end and set out to buy for future needs in advance of anticipated price rises. By way of comparison, I may say that in World War II, savings of the public totaled \$145 billions, or almost 41/2 times as much as in World War I.

Finally let me tell you this: World War I took only 25% of total production for war. World War II took 43%. Obviously the task of reconversion this time has been far more difficult and time consuming.

I am sure there is not a man in this room who can view these facts and not agree that postwar inflationary pressures this time are far more menacing than those higher level. that brought disaster to the American people in 1919, 1920 and 1921. To stick our heads in the sands of unreasoned confidence and deny the existence of these pressures would be the height of folly. Indeed, should the American people be misled by the advertisements of the National Manufacturers' Association and join the leaders of the NAM whose heads are in the sand, they never would In those four brief months, ac-forgive the NAM for the disaster cording to the Director of War that would follow. It would be a blow to public confidence in business leadership which it would acle of increasing the rate of out-take years to wipe out. Fortunate-put of civilian goods by \$20 billy the American people show no signs of following such blind leadership.

the question a calendar date answer. Our economy never was in so fluid a state as at present. Economic forecasting never involved so many hazards.

Mistake About Deflationary Forces

Almost every business man, public official and economist prefor advertising. You never could dicted that after V-J Day strong deflationary forces would be set in motion. Unemployment was supposed to reach a total of from to 6 million, which would spread to a sense of economic insecurity and make the public timid about buying. Retail sales would fall; prices would drop below ceilings. We could get rid of the subsidies without raising the cost of living and by rapid decontrol, bring wartime price regulation to an

Production of raw metals, for example, had expanded largely during the war. It was believed that we could get out of most raw lumber production which actually metal controls before the end of fell 9½% below the 1939 level the whole production picture, and the fell 9½% below the 1939 level in spite of the feet that the metal is negligible in the metal controls before the end of the feet that the metal is negligible in the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the end of the feet that the metal controls before the metal controls before the end of the feet that the metal controls before th most forms of aluminum and magnesium and on stainless steel. But that was as far as we could go. "Business Week" reported toward the end of last year, "Without any question the lid would blow" on

That still is true. Production of foods rose 27% during the war. When the government cancelled many war contracts and public buying power total rise of \$1.8 billions. During declined, it was anticipated that the recent war, currency in circu- most food price ceilings could be suspended and later removed. \$28.2 billions—a total rise of \$21 Rapid decontrol was predicted for billions, or more than 11 times the the first six months of 1946. Ac-

we suspended ceilings on citrus fruits, prices shot upward. Ceil-ings had to be restored. With au-ly enlarged buying power. tomobiles, radios, refrigerators, washing machines, etc., still not available in substantial quantities, the public's buying power has proved too great for removal of many food ceilings without price inflation.

Unemployment did not, as anticipated, rise from 4 to 6 millions after V-J Day. Employment in stead stayed 2 millions above 1941 levels, 61/2 millions above 1939 levels. The public's spendable income stayed 31% above 1941 levels, 91% above those of 1939. Instead of showing timidly in spending, the public at holiday time went into the greatest spending spree in history and stripped the stores almost bare of merchandise. Department store sales in December were 12% above those of 1939.

Demand for Goods on a Higher Level

These developments put an entirely new aspect on the problem of decontrol. They made it clear that the demand we must balance to get rid of controls without inflation is not the demand of 1939, but demand on a new and much

If all we had to do was to balance the 1939 demand for goods, we would be out of many controls by now for in November, 1945four months after V-J Day - we produced goods at a greater rate than ever was reached when the nation was not actively at war. The rate of output was 1% above that of 1941, 51% above that of 1939, our last real prewar year. Mobilization and Reconversion, we performed the production mirput of civilian goods by \$20 billions a year.

Producers of reconversion goods of controls, when can we get rid difficulties. Widespread labor the question a calendar details automobiles, radios, reations. Materials and parts supplied have been distressingly irregular because of varying rates of reconversion and need for filling empty pipelines. If a single part for a machine is missing, you have no machine.

Producers of some other goods are having trouble, notably those in the lumber and textile industries. These industries paid generally low wages before the war. They have been reluctant to raise them, even though their profits were more than adequate to permit increases. As a result they lost workers steadily to war plants and shipyards during the war.

Let us examine the lumber situation as an example. In an endeavor to increase lumber production, OPA, on the recommendation of WPB and later CPA, increased lumber prices 66%. This was the greatest price increase given on any basic commodity. Unfortunately, however, it did not increase in lumber production declined 22%.

Question may be raised if price increases granted were sufficient to permit the lumber industry to. pay wages high enough not only to retain its workers but to increase them. The answer is that profits on gross lumber sales rose from 3% in 1936-39 to over 12% in 1944, the last year for which we have adequate profit figures. Clearly OPA price increases were used by the companies to add to their profits: not to raise wages to attract more workers and solve the production problem. I may say that the profits of textile mills tually public demand for food has also rose far above prewar levels; yet they kept on losing workers In the face of an all-time peak because of relatively low wage,

Economic suffering, however, billions, a total rise of \$4.7 bil- serious difficulty. But when, in into these industries but it will

the face of another bumper crop | take some time to lift their output to the levels required to balance ly enlarged buying power.

Buying Power Above Prewar Basis

It is now becoming increasingly clear that public buying power will not return to the prewar basis. The government is supporting at high levels the incomes of farmers, which rose more than 170% during the war. Labor's wartime gain of 75.5% in takehome pay fell when overtime was for the most part eliminated and downgrading set in. Now the loss is being partially restored by wage adjustments.

Total business profits for 1946 will probably fall below wartime peaks reached in 1944 and 1945; but with excess profits taxes eliminated, profits after taxes will remain at a very high level; may top all previous records.

Our task obviously is not to produce goods enough to balance 1939 demand. We must instead enlarge our output to meet a new high level of buying power. This obviously will take time. Obviously, also, enemies of price control will charge in the meantime that production failure due to price control is responsible for hortages.

I would not be realistic if I did not admit that for limited periods in restricted areas price regulations have hampered production by certain companies producing certain kinds of goods. Drawing the fine line between price increases that are needlessly inflationary and those needed to maintain production is not always an easy task. Since V-J Day, however, OPA has amended procedures in 12 basic ways; most of the changes being designed to aid production. A total of 459 industrywide price increases, and of 4,957 individual firm price increases have been garanted. Incidentally, a total of 192,673 rent increases were granted on landlord petitions in 1945. These hardly reflect the inflexibility of policy which some persons attribute to OPA.

Not Interfering With Production Most of the charges that OPA is intefering with production are based upon misinformation. example, the Bridgeport Chamber of Commerce hired a firm of industrial engineers to study the effect of price control upon Bridgeport industries. Mr. Robert Wason, president of NAM, advertised the results. The first finding, reported last November, was that if price controls were not abandoned or radically altered by Feb. 15 (that was a week ago last Friday), 8,700 persons would be thrown out of work in Bridgeport. We do not yet have figures for Feb. 15, but by Jan. 15 the United States Labor Department reports

Bridgeport industries! In spite, however, of the fact that hampering of production by price regulations affects only a few companies and products for 1945. Ceilings were removed on Why? Because workers employed in spite of the fact that the rate of reconversion is extraordinary and the level of production before the flurry of labor disputes struck was phenomenal, it will take some time before production of all goods can balance the new high level of demand and we can get rid of controls without inflation.

4,800 workers had been added by

Three Stages Ahead

We in OPA see three stages ahead which I shall take time to describe briefly.

Stage 1 is the period of labor, material and parts shortages through which we now are passing-the most critical six months in price control history. Due to labor disputes and the above shortages, our very conspicuous reconversion industries have a hard time getting under way. They experience high "bulge"

(Continued on page 1122)

Removal of Price Control

(Continued from page 1121) costs before workers settle efficiently into their new jobs; before production lines get to flowing without interruptions and while overhead is piled onto low output. Inevitably these are blamed upon OPA, and these temporary high costs are cited as evidence that ceiling prices must be raised.

During this stage, OPA is being called upon for many price adjustments due to rising labor and materials costs. When conditions warrant, these are being made; but on a basis which business might consider tight, i.e., no adjustments are made so long as mdustries are earning their prewar dollar profits. We regret that at this stage more liberal adjustments cannot be made; but if the nation is to avoid an inflationary spiral that will wreck our economy and menace our free institutions, business must go along with us during this period of peak inflationary pressures.

Fortunately profits in most industries and trades are far above prewar levels and will remain so. Already goods with annual sales

of \$5.5 billions have been decontrolled but through Stage I decontrol will proceed at a very slow pace.

Stage II will come upon us rather suddenly. Wage readjustments will come to an end and costs will become stabilized: workers will increase in efficiency, production lines will flow without interruption; volume will increase, cutting unit overhead costs. Appeals for price adjustments will dwindle. Toward the end of the period, price competition will begir to reappear.

OPA operations during this pe-

riou will undergo two changes: 1. Pricing policies will gradually be adjusted to ease transition to a new economic era, by assuring carnings appropriate to a sustained high volume of production. Decontrol will proceed at a steadily accelerating rate.

Stage III will be a period of capacity production, full employment and stable costs. Public buying power will be at a very high level but the gigantic production of which our new econ-omy is capable will wipe out one shortage after another. Pressures will disappear first on materials and parts, then on consumer goods.

During Stage III, production

will have taken advantage of the materials, design and technological advances made during the war. Costs will go down as output and the serviceability of goods

With continuation of price adjustments to assure earnings appropriate to a sustained high level of production and with rapid acceleration of decontrol, OPA may attain with business generthe popularity it now enjoys with the people, which on all polls vote 80 to 90% for continuation of price controls.

continue long after June, 1947, for the housing shortage we face is not due to war curtailed construction only. Its cause goes back through the 1930's, when for 10 years our population increased much faster than our housing.

This look into the future is based upon the assumption that Congress will extend effective legislation and that no other influences will prevent price control from being successful. We are not good enough prophets to forecast the direction of these stages or the date when, if the OPA Act is extended, we can decontrol ourselves out of existence. We anticipate, however, that all controls but rents can be eliminated in 1947. Rent control can then appropriately be transferred to other agencies or to the states.

Whatever path we follow, the

larged buying power, with war accumulated shortages and with a productive capacity vastly expanded, nothing can prevent our entering upon such a period.

Will There Be a Depression?

Only one question remains to be decided: whether the era will be a stable and long-lasting period of full employment and production, or whether we shall, as we did after World War I, go through the usual post-war period of inflation, collapse and depression.

Because I like our system of free enterprise and want to see it preserved in a world where we are its last bulwark, I very much hope we will not now, in the name of free enterprise, decide for a postwar inflation and collapse that more than anything else will put our free institutions in jeopardy.

The question is, will we prove to be a juvenile nation, moved by whims and passing prejudices of the moment, and led by visionless groups with selfish interests to serve; or will we prove to be a grown-up nation, capable of learning from history and fixing policies in the interest of the whole nation.

With such issues in the balance, it is to me a matter of great regret that the United States Chamber of Commerce sits on the fence and does not throw its influence on the side of the happiness and enduring prosperity of our nation and its people. To sit on the fence when so grave an issue confronts the nation is almost as bad as betting on the wrong horse.

E. N. Allen Replies to Potter on Price Control

Following the above address by Mr. Potter of the OPA, Edward N. Allen, President of Sage-Allen & Co., Hartford, Conn., made the following remarks in refutation:

Let me make this very clear: I am not speaking in this discussion for the United States Chamber of Commerce; for retailers

nor for any segment of industry. if it is given a chance. One who is not so reactionary that he believes everything is perfect by a long shot, but who honestly does believe that our system of profit has, in the years past, brought more of the good things of life to more people than has ever been dreamed of under any other sys-

Of course government has had a prominent part in that picture. So has industry, and so has labor. And of course government has had to step in with a helping hand when the going has been too rough. It will get rough again too. Make no mistake about that. Because wars, great wars like the them would just about finish us. production, takes hold to bring Street. He has been mayor of man & Johnson, members of the

great prosperity. With vastly en- can just forget it, just wipe it off larged buying power, with war the books, they have got another guess coming. They, and we, are only kidding ourselves.

Cushion the shock? Yes, by all means, as much as possible, but to say we're not going to have inflation in doing so, is to know nothing about the facts of life. Let the OPA go into any of our retail stores. Let them compare the merchandise, the prices, the quality. Let them find out for themselves what things that are most wanted can not be purchased at any price. Then let them say that intlation is not here.

Attacking Symptoms

No, ladies and gentlement, the so-called holding of the line is an attempt to correct a symptom only, not the disease itself.

It has been well said that we have nothing to fear but fearcould that be our plight now? Does the fear of what would happen if all controls were withdrawn at once arise from evidence -or from the fear of mere uncertainty? It could be that the economic patient would suffer seriously if we suddenly took his medicine away. Or, on the other hand, it could be that his medicine was the wrong kind and that he would get well quicker if we took it away.

Professor F. A. Harper of Cornell University, one of the country's leading economists, has this to say about it: "Neither the laws of nature nor the laws of economics can be determined by public opinion polls, useful as they are for other purposes, such as testing what people believe.

"If public opinion had been polled as to whether the earth was round or flat the earth might never have become round.

"The executing of controls by arbitrary edict in times of peace results in the elimination of individual freedom and free enterprise, the life blood of a free society. There is but one way to attain the maximum production of things we want. That is by free prices in a free society with free enterprise. Prices at other points yield either unemployment and less total physical production, or its equivalent from make-work

Now on this question of profits. Supposing Henry Ford did ask for a 55% increase in the price of his finished product-what of it? Who's better qualified to know, and what is there to be ashamed of in that? Is that not in line with our profit system? And incidentally who is hurt by it anyhow? If it had been 100%, what of it? We don't have to buy, do we? Or is the OPA going to tell us some day that we've even got to do that?

No, ladies and gentlemen, the day is coming soon when we've got to make up our minds as to what kind of a country and govern-Pressures on rents and on I am speaking as an American, a (and I don't mean with permisment we want. One that is free, building materials will be most citizen of this country, one who persistent. Those on rents will believes in it and in its future, do either, but one with proper regulations and rules of the game, fair to all), or a country run by economic planners entirely. We're getting pretty close to the second type, make no mistake about it. The retailer of this country does not want high prices. He wants goods to sell at fair prices, and of good quality. He is not getting them now as you all very well know. He believes in high wages and the freedom of labor to bargain collectively with employers to constantly increase wages and living standards without govern-ment interference. But I cannot believe that intelligent labor leaders believe that constant increasing of wages is not tied hand in hand with some increases in one we've just been through, are prices, at least temporarily until Veazie has become associated with an expensive luxury. One more of competition, through increased Lincoln E. McRae, 449 Main Johnson, Jr., have formed Kaufnation clearly is in for an era of If our economic planners think we them down. Has this not been the 'the City of Rockland since 1938. New York Curb Exchange.

history of our economic life for the past couple hundred years? Would any one dare to say that prices are not higher in the last ten years than they were a hundred years ago? And so are wages. And so is our whole standard of

Industry Not a Vested Interest

Please, Mr. Potter don't continue to brand industry as merely selfish and a vested interest, if some of them have the courage to disagree with you. They believe just as honestly that your theorizing is wrong, as you sincerely believe that it's right. Of course they want profits, and they should. They wouldn't be successful if they didn't. So let's get that bugaboo out of our thinking. Maybe some of them want bigger profits than you think they are entitled to. Has that become a crime in free America? Labor asked for 30%. Surely that was no crime. As a matter of cold fact, Mr. Potter if you will analyze corporation profits for the last fifteen years, I think you will do a little less talking about the enormous profits that have been made in industry. Yes, take the fifteen year average. Of course they were abnormally swollen during the war. They did pretty well as you say, even after about 70% was taken away from them in taxes. But what better incentive to production than the chance of substantial profits along with substantial and ever-increasing wages?

All of this sounds pretty simple, you say, but what about the day of reckoning, the day of deflation, the day of depression?

Yes, that day may come. We can't deny that. Wars create economic disturbances and upheavals. When that time does come then government clearly has a duty to case the path and to prevent distress. Social security, full employment legislation and other means must be applied. That is government's duty to its citizens in times of stress. That is intelligent

OPA Planning Not Intelligent

The type of planning being developed now is not intelligent. It is an attempt to take our people by the hand and lead them around as though they knew nothing. It is an attempt to say to our people-to our manufacturers-to our business men-yes, and to our labor unions: "You who have played such a large part in making it possible for countless numbers to ride in automobiles and live in homes that would be castles in other lands are utterly incapable of doing this job. You are through. You now need a nurse maid. have got to take over."

Of course there is one additional fact that is not told us: If government should fail, the people will have to take over anyhow.

Now, ladies and gentlemen, fully realize that the things I have said are not popular. I fully realize that I will be tagged with the so-called stigma of carrying on the line of thinking of some of our business organizations who have differed with OPA.

This is not a popular cause that clusions.

But I feel with all the sincerity that I possess that it is a righteous cause-one that, I believe, is in the interests of all of our people. I am willing to stand up and be counted on that side—the side of a free America.

Steelmaking Capacity Declined During 1945

Steelmaking capacity in the United States as of Jan. 1, 1946, was rated at 91,890,560 tons of ingots and steel for castings per year, a decline from the wartime peak but by a large margin the highest capacity ever available in this country in a peacetime year, according to a report recently released by American Iron and Steel Institute, which further goes on

In January 1945, capacity was rated at 95,505,280 tons per year. The decline since then reflects chiefly the abandonment of some of the older steelmaking facilities in the industry. During the war years, almost 14,000,000 tons of new capacity were installed to meet emergency demands. The existence of these new facilities has made it possible to retire some of the older facilities.

The current steel capacity is more than 20,000,000 tons, or nearly 30%, greater than the capacity available in 1929, and is 10,000,000 tons greater than was available at the outbreak of World War II.

At the present time, open hearth steelmaking capacity is rated at 81,236,250 tons per year, down about 2,900,000 tons from the rated capacity a year ago.

Electric furnace steel capacity is currently rated at 5,500,290 tons per year, up about 45,000 tons from a year ago.

Bessemer steelmaking capacity, once the greatest of all from the tonnage standpoint, now stands in third place. At the present time, Bessemer steel capacity is rated at 5,154,000 tons per year, against I am endeavoring to preach. I am 5,874,000 tons per year on Jan. 1, asking no one to accept my con- 1945. out recognizing that neither they nor anyone else have all of the answers. At the same time, I believe that a careful, unemotional review of the dominating forces at work can bring one close enough to the answers to make possible an appropriate invest-ment policy. That is the objective of this discussion.

Sustained Period of Big Business Ahead

Never before could we look ahead with more assurance to a

(1) Deferred Demand - The bursting pressure of deferred demand is obvious on every hand. Individuals, businesses, governments and foreign countries are all clamoring for the products of American industry. This deferred demand motivates the economy in a manner comparable to the sidy payments and by devious booster on a freight train. It pro- other means. This has all been vides the extra power to start things moving, eliminates the possibility of getting stuck on dead center, notwithstanding business handicaps, and increases the pick-up to full speed once the brakes are released.

(2) Self-Generating Demand-We do not have ahead of us just a re-stocking boom. It is more fundamental and will be more enduring than that.

Once again, unlike the feeble 1930s, but more comparable to the vigorous 1920s, forces appear marshalled for a self-generating cycle of active business. It should not be assumed that business will turn down when production ap-proaches current estimates of deferred demand. To the contrary, simultaneous with the production of these goods, there may be created an equally large additional demand.

probably do not yet appreciate centuated temporarily by strikes, the ultimate consuming capacity but it is wrong to take for of the American market. Not granted that once the strikes are long ago there was considerable settled, almost regardless of the discussion about possible markets terms, industry will soon be proin South America and Asia. In ducing all the goods that we and those countries it would be neces- the world desire and have the sary to create a desire for the money or credit to buy.

products, as well as the wherewithal to buy. We learned this money in order to buy these problem of

Motion picture attending, autotening Americans had a desire for more than they could afford. Now they have the money or the prospect of earning or borrowing the money to satisfy these desires at a new high level. We have seen many examples of how this works during the war. There have been rationing and general shortages of many items which were being sold to the public in much larger amounts than before the war. The reason is that the average American with larger income has materially increased his rate of consumption and would, no doubt, have increased it further had there been adequate sup-

by conditions in the bond market. I to time individual instances of ufacturers of radios, may soon be producing at a rate in excess of what the public wants. But, in interest and yield at the market general, we are sure to have an less than 24%. Medium to extended period of high producend by out-producing what is generally thought of as deferred Practical investors should start demand, but will continue until there are created the maladjustments which themselves cause a downward cycle in business.

Powerful Monetary Forces Are Bullish

The preceding discussion leads into a consideration of the monetary forces which are exerting an influence upon the economy to a degree not generally recognized, especially by the Federal Government advisors and administrators.

We are now beginning to harvest a bumper crop of the bitter sustained period of big business. fruits of inflation grown out of a pseudo-economic policy followed by our Government for over a decade. The policy has been to increase purchasing power through deficit spending, relief payments, unemployment compensation, wage increases in excess of the increase in productivity, subdone on the thesis that high and expanding purchasing power means prosperity. It has been assumed that production would take care of itself regardless of the handicaps imposed upon the producers. If there is money to spend in abundance, goods will be produced in abundance and our economy will prosper. Should the public have too much money, there is no danger because they will leave it idle. Therefore, according to our economic planners, we should have an abundance of money because it costs practically nothing to make. All we have to do is monetize some debt which is easier than extracting oxygen from the air.

This policy was destined to produce serious trouble and the situation today is chaotic. There are dollars everywhere, purchasing power in super-duper abundance, but not the goods to be (3) Expanded Markets - We purchased. The situation is ac-

> President Truman re-expressed shrinking demand and of goods and excessive cash-supported demand, the President issued another plea for a rise in wages to increase consumer purchasing power.

Fallacy of Out-Producing Inflation

The truth of the matter is this. We all know what stupendous sums of money are available for spending or investment. The fig-

Now, assume that all strikes are settled, favorable operating conditions are created and industry turns loose producing goods and services at rates far in excess of any previous peacetime period. One year goes by and what will we find? We will find that in the process of producing these goods and services there was created enough new dollars to buy all of them. Rather than less money around, the stupendous amounts of money will become more stupendous. The relationship of money versus goods and available investments will become

We cannot out-produce these war-created dollars, against the current monetary background, any more than we can outrun our shadow. Actually we sit on a fiscal volcano with two alternatives for an indefinite period ahead. The one alternative is for the public as a whole to understand that what we have done during the past few years is save bank credit, or Government debt; that these misnamed savings cannot be spent and that they must be held dormant. These savings in total have the real value of a mortgage on a burned-down house. They are not backed up by usable assets, but rather by the intangible goodwill of "Victory," or, if you will, sunken battleships, destroyed bombers, burst shells.

The other alternative is for these funds to be spent in competition with current income which alone is adequate to clear the markets. This would mean higher

The probability of the first and desirable alternative working out is declining, due principally to the fiscal and economic policy of our Government. This policy is making the reconversion efforts appear like a football game with the Government being the cheer leader, the umpire and a participant As cheer leader, they shout, We must continue to hold the line; here is a bulge, hold it; stop this break through; we're winning, we almost have a touch-But while doing this, as down." umpire they take the ball from the team of sound money and advance it about 35 yards in favor of the team of inflation. they jump in as a participant, sponsor a round of wage in-creases that may push the ball at least another 10 yards. All the time, as cheer leader, they keep chanting, "Hold that line." The trend of the game should be clear to every careful observer.

OPA Cannot Prevent Higher Prices

The OPA can hurt the earnings position of individual companies, it can cause a scarcity of goods and confusion, but not stop the immediate trend toward higher prices. This agency has no conwithal to buy. We learned this when we invaded Africa. The natives were not interested in working just to earn additional working just to earn additional manager. It was necessary to bring money. It was necessary to bring exist very long in the face of our and the spending of savings. them radios and other attractive tremendous productive capacity. Also, this agency has only limited products to create a desire to earn We must expect again to face the control over two of the most important cost factors consequent slacking of sales, pro-duction and employment. This has very little control over the mobile riding, newspaper and possibility of a deflationary spiral factors that determine prices. Of magazine reading, and radio lis- in the future will exist unless we necessity, its avowed price connecessity, its avowed price connow plan to adopt an effective trol can be little other than vol-full employment program." And ume stimulating or retarding stimulating or retarding then, in the midst of the shortage profit control. It can only delay price adjustments to costs for industry generally.

I probably need to go no further into justifying my conclusion that the monetary forces work toward supporting a sustained period of active business, at high and generally rising prices for some time ahead. The inflation potential today is much more explosive than at the end of World War I, and the Government's policies are adding fuel to the fire ures are widely publicized. Our cies are adding fuel to the fire companies once the im hope for avoiding more serious. This discourages the holding of difficulties are overcome. inflation, according to this pop-high grade bonds, preferred stocks (a) The complete elimination ular concept, is to produce goods and cash. On the other hand, it of excess profits taxes is a mate-

advance in prices that has taken place during the past four years.

Outlook for Profits Reasonably Good

In considering the outlook for profits, we again find it best to fall back upon an analysis of the fundamentals. In the heat of the wage-price struggle, the outlook can be confusing. However, there are certain forces that the Government and labor leaders must ultimately join industry in recog-

There is a growing demand for the output of industry operating at 100% of capacity. If prices in relationship to costs are arbitrarily set so that only, say, 80% of industry can make a profit or break even, production will be restricted. This means that more of the demand would remain unsatisfied and public discontent would grow into political pressure for a cure. This will be true as long as the public continues to be more concerned about getting goods than about the prices being charged. For this reason alone, the prospects are that prices will ultimately be adjusted in relationship to costs so that marginal producers necessary to meet the demand can break even. This is what generally happens as a result of competition. It means that a background will be created, if industry is to operate at full capacity, that permits the efficient producers to make good profits.

Another fundamental approach is to look at the need for employ-Unemployment now much lower than had been estimated. It is not a serious prob-lem, as evidenced by "Help Wanted" signs. By summer over there is much that they can be de-4,500,000 additional members of the armed forces will be released. This means that the problem of finding jobs is going to become of importance. A state of full employment requires full production and not just the operation of the more efficient units in the economy. In order to provide these jobs, in order to create an environment where there can be full employment, prices will have to adjust in relationship to costs so that the less efficient but necessary producers, the margin of producers, can operate.

Clouds Are Clearing

partial expressions of the two compelled one revision in the Government's wage-policy policy. The changes in policy were material and could go a long way toward working out the situation, if administered efficiently. However, if this new policy is not adequate, we can be pretty sure that before long the same forces will compel other revisions.

In this respect may I suggest that as investors we do not prejudice ourselves against the pricecontrol policy to the point that we lose perspective; also, that we recognize a difference between the bark and the bite. For example, last week the OPA through one spokesman stated that price controls did not restrict production (the bark). On the same day it announced through another spokesman general price increases for the cotton textile industry, including an additional 5% incentive increase on certain items and predicted that this would increase production of most needed clothing by 50% (the bite?).

More Assurance of Reasonable Profits

Let us now turn to a number of specific observations that give assurance to the expectation of reasonably good profits for most companies once the immediate

There will develop from time so that these funds can be spent, encourages the holding of common rial help to most companies. For

stocks, notwithstanding the big many companies it is an advantage that more than offsets all of the operating difficulties being confronted.

(b) There are many industries that are not affected seriously by OPA controls and labor difficulties. Good examples are banks and merchandising companies.

(c) The large volume of business that many industries are and will experience will go a long way in overcoming the difficulties. A good example is the public utility industry. Because of the large increase in sales and the resultant reduction in unit costs, most of the well managed electric light companies are in position to reduce their rates and still show an adequate rate of return.

(d) There are many industries where labor costs are relatively small, both directly and indirectly through their raw materials, and a rise in these costs can be largely offset through increased efficiency. Most of the chemical companies are in this position, for ex-

ample. (e) We have seen during the war how price and cost difficulties can be moderated frequently by quality control. A New England railroad recently announced that the completion of its program of replacing steam with Diesel locomotives would reduce operating expenses in an amount equal to annual fixed charges. Some machine tool manufacturers have already completed new machines that will increase the speed of operation and reduce the costs to a point that renders economically obsolete the machines now in use. The adaptability of management is still the investors' principal propended upon to do to the benefit of profits.

I believe we will find upon careful study that a substantial majority of the companies whose stocks are of a quality to be considered by the average investor, come within the above classifications and have the prospects of showing at least reasonably good earnings during the prospective period of active business.

Stocks Could Advance Considerably Further

There are few approaches to-ward the market that have as wide a degree of error as the one Fortunately, the clouds are of attempting to estimate upside clearing a little. The growing statistical possibilities in a dyof attempting to estimate upside scarcity of goods and strikes, both namic, changing economy such as partial expressions of the two we now have. I would not spend forces just discussed, have already much time working on such figures just now. It is remembered that the primary determinant of the level of the stock market is the investor's appraisal of current conditions and prospects. Current conditions are confusing, and on the surface uncertain, but along with it all there are many indications that encourage the investor to hold common stocks. The prospects favor the common stockholder. He can look forward to a sustained period of active business, good profits for most of the efficiently managed companies at least, increasing commodity prices This is a background that could ultimately carry stock prices to an extremely high level.

Stocks Relatively Attractive for Income

Income from investments is important to the majority of investors, and a comparison should be made of the relative position of bonds and common stocks. order to be specific and most helpful in making this comparison, reference will be made to the Dow-Jones Industrial Average which over a period of years is quite representative.

(a) During the two decades from 1920-1939 inclusive, or approximately from the end of World War I to the beginning of World War II, dividends on the Dow-Jones Industrial Average

(Continued on page 1124)

The Market Outlook and **Appropriate Investment Policy**

(Continued from page 1123)

the period ahead were to average no better than this, stocks could remain at approximately current equal to that of high grade longterm bonds.

(b) The period between the end of World War II included two intervals of abnormally low dividends. During most of the 1920s industry was expanding rapidly and due to the need of increased capital, leading companies paid out in dividends considerably less than 50% of earnings. This compares with an average of near 65%-70% for a number of years preceding the outbreak of World War II. The second interval of abnormally low dividends was during the early part of the 1930s when we were in an intense depression. If we adjust for these two abnormal periods, we obtain an average dividend of about \$6.50. It is probable that this adjusted average for the past period would hold for an indefinite future period. With dividends at this level, leading stocks as a group could advance in price an additional 25%-30% and still be yielding as much as high grade long-term corporate bonds, and more than long-term U. S. Treas-

(c) Actual dividend payments for these 30 stocks for 1945 averaged \$6.70. Indications are that notwithstanding immediate difficulties the figure will be at least \$7.00 for 1946. This means that at current prices selected common stocks afford almost a 40% better yield than high grade bonds. In addition, it appears reasonable to expect that before the period of active business comes to an end there will be an increase in the average dividend. In the meantime, should there be an interruption in the major uptrend of stock prices and stocks were to have an extended period of downward readjustment, good stocks held or bought at current levels would continue to be better long-term investments for income than high grade bonds.

A Constructive Lesson From the **British Market**

There is a feeling of some insecurity in holding stocks at these historically high levels when political uncertainties exist and so much allowance must be made for the monetary influences. Past experiences cannot be relied upon too much. Under the circumstances, a review of what has happende in London helps in weighing the market importance of conflicting forces and adds confidence to this appraisal of what is happening here.

an unexpected shock to the Lon- clines are precipitated. financial district. Against their announced program of nationalization and control, the New Deal appeared a very mild program of social change. Many individuals who only weeks earlier were regarded as radical, now appeared conservative. A socialistic government had come into power and Great Britain was to proceed down a new road of economic life.

The decline in the London market during the week following the Labor government landslide was probably the biggest ever recorded in so short a time. Within a few days, however, a sharp rise set in which eliminated almost one-half of the decline in three days. It was only a matter of weeks until the market as a whole had worked back to its highest level, with many new highs among stocks of companies not to be immediately affected by the program

averaged \$5.10. If dividends for market show such strength in the face of this political upheaval and general fears? These forces appeared to dominate and one prices and afford an average yield quickly sees their counterpart in our market:

(1) The new government an-nounced a policy of further lowerof World War I and the beginning ing of interest rates. Easy money was to be made easier. This meant that there would continue to be an abundance of money seeking investment.

> (2) The general public went on a buying spree as soon as the war ended, which was evidenced by large retail sales. After exercising retraint it seemed that people impatiently desired to spend their money and obtain the best of what there was available.

(3) There remained unshaken confidence that there lay ahead a sustained period of active busi-

(4) The prospects were that taxes would be lowered, and excess profits taxes were soon reduced to 60% to begin Jan. 1, 1946.

(5) The amount of funds seeking investment was so large that investors became uneasy and quickly commenced to seek outlets for their funds. While they were cautious toward the equities in industries that were scheduled for early nationalization, they saw the readjustment as an opportunity to put their funds into equities of companies that should do relatively the best.

When we compare our situation with that affecting the British market, we find that the influences that dominated that market on the upside also prevail here, and in many respects to a greater degree. In addition, there are these fundamental differences. The political situation here is much more favorable to the investment of capital than it is in Great Britain. Our basic economic position is much more favorable. Also, our Government has adopted a more inflationary policy. If the economic and monetary influences could support the London market against the political developments, it is only reasonable to expect that they would dominate our market to a much greater degree.

What Are the Risks in Holding Common Stocks at These Prices?

Stocks have risen to prices where investors should not forget how frequently, "It's better not to know so much than to know so much that ain't so." Therefore, we should check our risk, and the first question to ask is: Could our judgment be wrong and could a deflationary spiral set in at this time? The probabilities are almost unanimously against its happening, in my judgment. There does The election of a majority Labor not appear to exist the economic government in July, 1945, came as material out of which major de-

Prices-A decline in commodity prices is not in prospect. The first important sign of weakness in the commodity picture should be in agricultural products. Here we find that any decline would be limited to moderate proportions for at least another three years through the Government's farm support policy. Other commodity prices in general are bound to increase. This appears an inevitable result of the supply and demand equation that exists and the Government's economic and fiscal pol-

(2) Outlook for Wage Rates We are in the midst of a period of rising wages with no possibility of deflation in this section of our economy.

(3) Inventories - A characteristic of periods of deflation is the ing the selection and quality of

ever, we are on the threshold of ing long lines to buy nylon hose been carried further with a dea period of building up of inven-tories on the part of industry and consumers. There are shortages and not surpluses, with minor exceptions.

(4) Credit-Individuals have reduced their obligations to a probable minimum and rather than any possible further contraction, it is obvious that there will be a substantial expansion as soon as consumer durable goods are available. Business is in an extremely strong financial position, has no volume of loans to liquidate. When common stock prices can advance substantially concurrently with a ruling of the Federal Reserve Board eliminating all margin buying, it is obvious that there is no speculative credit to liquidate in the securities market.

(5) Government Policy - The Government is committeed to a policy of maintained or increased prices, and of easy money. have already seen how this policy works if an agricultural product declines in price. Recently the price of Burley tobacco declined after more than doubling from pre-war. Quickly a bill was rushed through the House and the Senate and signed last week by the President. This authorized reductions in marketing quotas and acreage allotments for this year's crop and increased the penalty on Burley tobacco marketed in excess of quotas. It was called a bill to stabilize the price of Burley tobacco. Regardless of the past advance, the price should not

In keeping with this policy, the Government would almost certainly (most people would say have to) step in and support the Government bond market, should liquidation develop. This in turn would have a steadying influence upon the other markets.

(6) Corporate Earnings-Almost regardless of developments, earnings as represented by the 30 companies making up the Dow-Jones Industrial Average, should average during 1946 at least the level of 1945, and very likely higher. There are individual companies that are temporarily doing very poorly, such as steel companies, but this is so obviously due to artificial forces, that investors are unlikely to lose confidence in time bringing about an improvement in most situations. This observation shows how strong are the prospects for an increase in earnings If we assume that the better situated companies, such as chemicals foods and merchandising, were to continue to earn at the rate expected for 1946, allowing for no further improvement, and the companies whose earnings are being held back, like the steels and motors, were to recover to only a moderate rate against expected volume, average earnings for the 30 representative stocks in Dow-Jones Industrial Average would increase about 20%.

(7) Dividends - A careful review of a representative list of good common stocks suggests that (1) The Outlook for Commodity few are faced with possible dividend cuts, and more will likely increase dividends during the year. Again, it is helpful to refer to the Dow-Jones Industrial Average. Of these 30 stocks, it appears that not over five may be faced with dividend cuts during the year, and up to ten or more could initiate increases. The fact that the managements of such companies as U. S. Steel, Bethlehem Steel, and Chrysler were willing to declare the regular dividends for the first quarter despite current bad earnings, gives a degree of security to the dividend out-

(8) Public Psychology - It is difficult to visualize a more than never-to-be-surprising intermediate reaction at a time when department stores are showing almost wild gains in sales, consider-

and other long-scarce items. This cline in over-all yields. is occurring not at the end of a boom, but while consumers' inventories are low and money-backed needs are tremendous

An examination of these usual causes or reflectors of deflation reveal no dangers. To the contrary, each points toward an outlook for the maintenance of current or higher common stock

The Risk in Current Stock Prices Per Se

The prudent investor can't help but be concerned when he compares current prices with those in the past at important periods such as on the threshold of the 1937 decline. Actually, the fact that the stock market is moderately above the 1937 highs at this particular time may be a favorable indication. The 1937 high level was made as a final top to a long and substantial bull market. It came close to a cyclical top in business and on the threshold of a major period of liquidation in business, commodity prices, wages, inventories, credit etc. New highs have been made during recent months against a background of uncertainty but on the threshold of a period of almost certain high business. For the market to have risen above the 1937 levels, when we are in the midst of poor earnings and difficulties and are yet only on the threshold of a period of active business, demonstrates the strong forces that are at work. This is in contrast to the tail-end evidences associated with the 1937 market highs.

Inflation Gambling Not Too Important

Secretary of the Treasury Vinson said a few days ago that, "We have won the inflation battle for nine rounds. It would be pathetic if we lost the tenth and last round." What has happened during these victorious nine rounds? Farm prices are up over 100% wholesale commodity prices, 40% and the cost of living is up over 30%. During this period we have built up a surplus of funds that can't be spent or invested except by forcing higher prices for both commodities and capital investments and that hovers over our economy like a fiscal atomic bomb. If this is the record of nine rounds of success in fighting inflation, one hates to think of what it would take to lose. How could there help but develop some concern with the constant talk from Washington of the growing dangers of inflation, and against the background of this score. They wave the red flag and then won-der why the "bulls" are activated.

Nevertheless, I doubt if the socalled inflationary buying that has taken place is as much a cause of rising prices as a result of rising prices. The concurrent strength in bonds, preferreds and common stocks indicates that the strongest force is the desire to put a growing part of the uninve funds to work

Intermediate Downside Risks

There is one remaining logical consideration before concluding this review. If we are now in the midst of an intermediate reaction, how far down might it carry the market? I shall outline one practical approach to the answer.

A 10% correction from the recent upside levels, or a decline eliminating approximately onehalf of the last substantial upmove starting in August, would take the market down to the 180-185 range, in terms of the Dow-Jones Industrial Average. This would carry it back to the September-October level, and a lot has happened since then that justifies higher prices:

(1) Excess profits taxes have been eliminated.

of nationalization. How could the liquidation of inventories. How- merchandise, and people are form- (2) The easy money policy has New York May 25.

(3) The public has gone on a buying spree, as evidenced by department store sales.

(4) The Administration has traveled an irreversible distance down the road of more inflation.

(5) Concerns over possible general deflation during the reconversion have been replaced by concerns over intense shortages, 'Help Wanted' signs are seen almost everywhere at a time when it was predicted that unemployment would be a major problem.

(6) Rather than commodity price weaknesses such as some people feared, prices are firm with only a few exceptions. Wholesale prices could advance during the next few months as much as they have during the past few years.

So much has happened in favor of higher stock prices since the market was last at the 180-185 level, that it is unlikely that a period of intense concern could drive the market below that level. This suggests that the downside risk is limited to only a minor further decline.

Conclusion

One devoted to the preservation of capital, as well as the profitable use of capital, cannot resist the urge to be more careful after the big rise that has already taken place since 1942. It is emotionally disturbing to see recent activity at high prices after such an advance, and then to see the market reacting sharply. Many individual stocks must have reached dangerously high prices, and cautious selection is demanded as a matter of investment prudence.

Nevertheless, this appears to be a rational conclusion:

(1) There lies ahead a sustained period of big business that should produce at least reasonably good earnings.

(2) These earnings and resultant dividends will be capitalized against an inflationary, easy money background. The result could be substantially higher common stock prices.

(3) At the same time, there does not appear to exist the forces that could set off a major deflationary spiral in common stock prices. The intermediate term risk appears moderate.

(4) The monetary situation in general, the increasing supply of funds available for investment, particularly with institutions that must invest a large part of those funds in bonds, the prospect that the Government may not issue more long term bonds, during 1946, and the announced policy of the Treasury Department to pursue a policy of easy money, makes almost certain a background of continued low bond yields.

In case anyone interprets this analysis as pointing toward an investor's heaven with a good portfolio of selected common stocks, let me caution that the road we are following may be that of Satan.

UNO Trade Conference

The United Nations Economic and Social Council wound up its initial London meeting with plans for an international trade conference to be held before the end of 1946. Proposed originally by the United States, as the Associated Press pointed out in its London dispatch of Feb. 18, the trade conference is to discuss international plans for high employment, reduction of trade barriers and establishment of an international trade organization.

American business men and consumers rightly fear the effect of inflation upon our economy. And they should know now that their Government is prepared to safeguard their earnings and savings by stabilizing prices. And they should know now that the Government is prepared to remain on the price stabilization job economic equilibrium is within reach.

Production Only Real Solution

As you know, I am on record as having said many times that I believe production in the last practical analysis, is the only real solution to the problem of inflation. I want to take this opportunity to reaffirm that statement. At the same time I want to say, with equal firmness, that I believe we cannot drop our defenses against inflation before production begins to supply demand.

Price stabilization is a measure we are using to safeguard our economy against the disaster of rising prices and costs.

We need that safeguard until production is sufficient and the volume steady enough to begin balancing with demand. Demands at present are very heavy. They have built up during the war, and there are new demands at present for many things.

It will take time to manufacture consumer durables, and materials needed by business and construction materials—and this alone is a big, time-consuming job which requires changing over and adjusting the Nation's complex business machinery from war to peace production. It will also take time to get these things to the market. The channels of distribution, wholesale and retail, for business and consumers have to be filled up again. Anywhere from a few weeks to many months are necessary for this. And that supply, once volume production has been reached, will have to be maintained for more weeks and months in order to approach demand.

Effect of Removal of Price Stabilization

We should ask ourselves what would happen to production prospects if price stabilization were to end before we had allowed enough time for the practical tasks of reconversion. Suppose we entered a period of spiraling the last war. If it happened again industry would certainly be obliged to stock up with materials for manufacture before prices went higher. It would be natural for consumers to rush to buy what they needed before the cost of living climbed further. It would be natural, too, for business to withhold finished goods from the market, because it would be facing a loss to sell when prices were sure to go higher. This situation would for a time inevitably increase, not lessen, the shortages of both producer and consumer goods.

A disordered price structure, with prices and costs bolting out

ages would run into further up since last August. Prices con-

Production Would Not Increase

It is not reasonable to expect that all production would increase if all price ceilings were removed. 'n specific cases, where lack of production is retarding reconversion, we can divert labor and materials from other uses, by granting measured price increases in order to step up output. This can be done effectively only under the stabilization framework. With all prices rising, that advantage would be lost

At this stage in reconversion there are still a number of opstacles to be overcome before a larger volume of finished goods can flow to market. Shortages of labor, of components, and raw materials, still have to be met. Properly trained workers must be where they are needed and at the right times. Industrial plants and distributors have to reorganize for peace time trade. Technical changes are still being completed. and labor and management must settle down again into normal bargaining.

Production Is Increasing

These factors must be taken into account when we talk about achieving the kind of substantial production that will eventually smother inflation. But even so, even with practical problems still to be solved, our total civilian production is increasing. There has been noticeable progress in the production and shipment of finished consumer durable goods to market from the reconversion industries.

December shipments of vacuum cleaners, electric irons, refrigerators, electric ranges, washing machines, sewing machines and radios ran 10 to 30% above November shipments. And industry expects shipments of these and other consumer durables to reach at least pre-war rates of shipment by June of this year.

Goods from reconverting industries are coming to market in larger and larger quantities. This new production is coming in additional to overall production for civilian use that already stands at the highest level in our history.

During the war years production for civilian use, in addition to our unsurpassed war manufacture, outreached any previous peacetime period. And on Dec. 31, production for civilian uses was higher than it had ever been before in peace time. During 1945, for example, food production in this country was 35% above the average for 1935-38-a peak up to then. An indication of today's volume of production is the amount of goods moving through department stores to consumers. It stands at an all time peak.

Sufficient production is an eventuality on which we can rely. But it has not yet materialized. It it will require time is that present demand for goods is so swollen that even better than ordinary production is not going to be enough to meet it immediately. This factor is one of the inflationary pressures that we have to

watch. Like many other inflationary pressures that have been developing since VJ-Day, heavy demand is not itself a bad thing. On the contrary, it provides a bridge which we can use to reach a period of good jobs, stable markets, and better times for all of us. We can reach this period if we take action now to prevent runaway inflation. But if heavy demand and great purchasing power are allowed to dissipate themselves in a boom that can end only in a depression, we will

tinue to press hard against their ceilings. Wholesale prices have been inching higher and higher. Since last September, wholesale prices have risen faster than during any similar period since 1943.

Consumer spending continues to be heavy. Department store, chain store, and mail order sales were higher during the whole of 1945 and higher during the last month of the year than during comparable periods in 1944. Consumer buying in the last quarter of 1945 was at the highest rate in our history. Retail sales were at their all-time peak as the new year began.

Inflation Psychology

All these evidences of the trend toward inflation must be considered along with another one. And this is the psychology of inflation. That is becoming more and more apparent. Trade and business journals frankly cite the probability that prices will go up. We know that both public and private purchasing agents have frequently been unable to contract for future deliveries of goods except by agreeing to "escape clauses," providing for the possibility of a higher price. The assumption that prices are going up gives business an irresistible motive to withhold finished goods from market in expectation of higher prices and profits. We have not yet been able to judge how much this fact accounts for a number of shortages. But we must reckon with it. It is a practice that adds artificial scarcity to the very real shortage of goods that already exists.

This fear or anticipation that inflation is on the way-the assumption that prices are going up, -could very well be translated into disastrous action. And the action ly and quickly than it has. would be a rush to buy that would accentuate the already strong demand for goods and services. There is sufficient buying power available among both business and consumers to give considerable impetus to a buying rush.

It is obvious that we will continue to need safeguards against such growing inflationary tendencies. It would appear that, to safeguard consumers against increased living costs, it would be necessary to control only the prices of food, clothing, rents, and housing. This view has been advanced by those who sincerely want to avoid the development of serious inflation.

Prices of Durable Goods

I very much wish that this were all that was necessary. It would greatly simplify the task of the Congress and the Administration. Unfortunately, while inflationary general as they are today, this of course, could come in after six proposal simply would not work.

It would not accomplish our objective of stabilizing the cost of will require time. One reason that living, because price increases are the controlled sector.

Do Price Controls Decrease Production?

really restricting production, and up. They will need adequate perthus contributing to inflation. sonnel to assure prompt action. One main reason for this contention, I think, is that each bus .- Industry to Have Minimum Peacenessman knows that if his own | prices went up, without any The revised wage-price policy change in other prices, he him- means that industry in general self could produce more.

This is certainly true. If any single price were raised, while all the producer in that line pays his workers and the price then attract more labor, get more materials, and produce more. We have taken advantage of this under price control in increased out- to buy farm products. of materials and products

Control Removal Would Create Disordered Markets

But it does not follow that removal of all controls would have the same effect. Instead, it would destroy the advantage and create disordered markets. Today's high demands can be filled only by Today's high many months and, in some cases, years of sizable, steady production.

Certainly lifting price controls would not help us complete certain necessary reconversion tasks that industry still is working on. The same practical and technical operations would still have to be finished. It would still be necessary to allow time for distributors to reorganize their sales outlets. Workers would still be relocating themselves. Collective bargaining would still have to op-

If continued price stabilization were actually restricting all production, we would have been undergoing a different sort of transi-tion period since V-J Day instead of our present rapid progress. We would have had a limping reconversion. Unemployment would have increased much more sharp-

No Rigid or Inflexible Control

However, relying on continued effective price stabilization to keep our economic house in order until production begins to approach balance with demand, does not mean that we are determined on rigid and inflexible control of prices.

Existing stabilization powers provide sufficient room for necessary flexibility in price control The development of a revised wage-price policy by the Government during the last fortnight illustrates this point. Since V-J Day there has been a fairly narrow category of wage increases that could be used by industry as the basis of request for price relief. We have been depending mainly on free collective bargaining by industry and labor to settle the wage issues, without resulting price increases. Industry months and ask for price relief or the basis of wage increases that had been granted and that had increased production costs.

Now we have revised those controlled sectors boomed—as un- ground rules. And it he offers for materials. He could means that agriculture has a better income outlook for the very reason that labor is able to maintain wage levels and so continue

This stabilization program can which are bottlenecks in recon- be adjusted to meet the changes of the transition period. It is not a formula for rigid control of the economy. We have already dropped the bulk of the wartime economic controls. The few still effective, in particular price control, must remain for a time. We will lift these few remaining controls just as soon as conditions permit. As I have said many times before, conditions will themselves determine the timing.

Gradual Elimination of Controls

The time will come when price can be dropped. They should be dropped on each product as soon as supply is in reasonable balance with demand. This may very well result in price control becoming highly selective before the need for it comes finally to an end, But in the meantime we must maintain the machinery for general price stabilization.

During this war we kept prices and the cost of living from getting out of hand. The real battle is at hand. The pressures toward inflation are heavier now, as they always are following war. And at present, when we are fighting heavier pressures, our weapons of defense are fewer. The main one aside from public opinion has now come to be price control.

Subsidies

Subsidies have also played an essential role in stabilizing the cost of living during the last three years. They provide certain producers with sufficient returns to enable them to produce adequately, without raising prices to the consumer. This was an important factor during the war in limiting demands for increased wages to meet increased living costs.

Farmers, along with consumers in general, have a stake in keeping the cost of living in line. Stabilization has kept the prices of things farmers had to buy from soaring at the same time that farm income has remained good. drop expected during the last six months has failed to materialize. The December cash income of farmers was higher than the August level, with seasonable adjustments.

Nevertheless, even though the subsidy helps keep the cost of living in line, farmers do not like subsidies, and I sympathize with that it is desirable to get rid of all subsidies as quickly as possible, and intends to do so.

The Stabilization Administration has announced that the remaining food subsidies will be terminated as soon as prices of the non-subsidized elements in cost of living decline enough so that it will be safe to allow the cost of the subsidized elements to go up. At the same time, farm incomes will be protected. Here again, as in price stabilization, it is a matter of keeping a balance. But because subsidies continue necessary for cost of living stabilization, it will be necessary to retain the authority to use subsidies, along with price control, during the 1947 fiscal year.

Important considerations of national welfare, as I have shown, (Continued on page 1126)

Price Control and Reconversion

(Continued from page 1125) Emergency Price Control Act of 1942, as amended, and the Stabilization Act of 1942, as amended I have discussed a number of these considerations in some detail because each of them is important. It is vital to prevent inflationary trends from developing into a real inflation that will hamper business in its effort to produce. It is vital to keep the cost of living in line so that labor need not press for higher wages. It is vital to keep the cost of major raw materials in line so that production can go forward.

I urge your committee to act promptly so that the two acts on which the stabilization program rests may be extended for 12 months beyond June 30.

Text of Mr. Snyder's Address at Detroit

Speaking before the Economic Club of Detroit on Feb. 18, Mr. Snyder, directing his remarks to the broad problems of industrial statesmanship and reconversion, called attention to the problem of retaining price controls and attaining full production. In view of the statements made by Mr. Snyder, in which he denied that price controls were seriously impeding production, we publish herewith the text of Mr. Snyder's Detroit address.

We stand today on the threshold of a period of the greatest civilian production in the history of the United States. We are fighting the "Battle for Peacetime Production," and we shall be engaged in that battle throughout 1946. This is a time when output is limited, not by consumer demand, but by the ability of business to produce. Our strategy in fighting the battle for production, and the industrial statesmanship displayed will determine the shape of our post-war economy. Our future prosperity will depend upon the outcome of the cam-

We are completing the first phase of the reconversion period during which we reconverted our plants to peacetime production. In nine months the nation has swung the pendulum from all-out production for war, which we had achieved prior to the defeat of Germany, to the beginning of an all-out production for peace. The attainment of the goal of full peacetime production is beset with difficulties, but the stakes are as high as any we sought dur-ing the war itself. The responsibility for success in our new effort rests, as it did throughout the war, on government, on industry, and on labor.

But there is one great difference. That is the shift in the division of responsibility for production-from the government, to management and labor. During the war, production was financed by the government. Our entire war output was planned. The government built plants when there were shortages, it directed the distribution of men and materials to essential industries; it regulated civilian distribution through rationing. The govern-ment assumed a direct responsibility for production and government purchasing provided for half of all that was produced.

Government's Reconversion Responsibilities

Now, however, we face a far different picture. The government still has many

responsibilities, but it has returned to private initiative the direct responsibility for meeting the nation's demands for goods and services. The government no longer finances and directs our er is the most important custom- ficial scarcities.

er of business. Industry now make it imperative to extend the looks to the nation's 140,000,000 customers for its market.

The government's role in reconversion is to assist industry and labor in meeting the responsibilities which are now theirs. should like to describe for you the steps which the government has taken, the policies it has adopted, and the course it may be expected to follow in assisting industry and labor to achieve their goals.

During the initial months of reconversion, the government has followed a planned program of decontrol to give business back its freedom of action and flexibility so that production for peacetime markets would get underway as

rapidly as possible. Our basic strategy of returning to a free competitive economy required that controls be removed unless they were absolutely essential to transition needs.

In judging the need for maintaining controls, we have been faced in some cases with this dilemma:

To keep too many controls too long would inevitably clog our business economy and delay production.

To lift controls too soon would cause disorderly conditions and seriously delay reconversion.

The government has consciously leaned to the side of prompt re-moval as the lesser of two evils. In fact, in a few instances we have found it necessary to restore some of the controls we have removed: for instance, controls over construction, and over wheat.

Lifting controls is not in itself the easy path to full production. It was recognized from the beginning that further action would be needed to locate and remove those obstacles on the road to reconversion that are slowing down or threatening to halt the industrial machine. The government is working constantly to break production bottlenecks of materials, equipment and manpower.

There is enough of most materials to meet the nation's immediate peacetime requirements but a few important materials are scarce enough to affect the speed of reconversion. The government is maintaining a continuous analysis of the demand and supply of basic materials. The government's policy with respect to scarce materials and facilities was restated and reaffirmed in an Executive Order of Feb. 14, 1946, which reads, in part: "It is the policy of the government, in order so far as possible to prevent price increases, that there be prompt and firm enforcement, during the present emergency, of government controls of scarce materials and facilities." Where direct action is necessary to prevent shortages which might delay reconversion. the government is using three major procedures:

One-It is taking direct action to expand the supply of critical items by such means as labor recruitments, priority assistance to manufacturers in the purchase of equipment or facilities needed to raise output, expediting the release of Army and Navy supplies, and price adjustments where necessity is demonstrated.

Two - The government exercises control over uses of critical materials. Certain materials, such as tin, natural rubber and burlap, are so scarce that their purchase must be regulated to insure that supply is available for the most essential uses. The channeling of scarce building materials to low and moderate cost housing is another example.

Three - The government is maintaining controls to prevent excessive inventory accumulation and hoarding as long as materials are in short supply and inflation production except in a few in-stances. The government no long-ducers and distributors from arti-

The Wage-Price Problem

A great deal of time and study has been devoted to the wage and price problem. The aim of the government's reconversion pricing program is to bring peacetime goods back on the market at non-inflated prices. The formulas for "reconversion pricing" were laid down immediately after VJ-Day. Since then there has been a continuous review of price ceilings on a number of reconversion products.

We have been engaged in setting a wage-price policy which will, as far as possible, and within certain limitations, maintain wage-earners' incomes without breaking the price line. A fair solution of the wage-price problem is essential to successful completion of reconversion. Without that we cannot get into full peacetime production and without full production we cannot win our fight against inflation. Management and labor must come to a fair agreement with each other on the wages to be paid but the government has an urgent responsibility on behalf of all the people to make sure that rising wages and rising costs do not result in run-away inflation, for everyone of us would suffer if that were permitted.

The Executive Order of Feb. 14, to which I have already referred, directs the Price Administrator to provide for an adjustment of price ceilings in any case which he finds that an industry is in a position of hardship as a result of an increase in wages The adjustment is and salaries. to be sufficient to enable the industry to earn an average rate of profit equal to the rate earned during the peacetime base period applicable to that industry.

We have not reimposed full control over wages because in this period of readjustment all parties agree it is desirable to permit the fullest degree of collective bargaining within the framework of price control. We hope to pre-vent hardships resulting from drastic reductions in take-home pay but we also hope to prevent inflationary effects on prices. That would defeat the purpose of wage increases and would cause hardships to all persons receiving fixed incomes. And, above all else, our over-all objective is to lay the foundation for a return to the high-wage, low-price, mass-volume economy which has been the great achievement of the American system of free enterprise and the basis of the unprecedented material progress of our country in this past century.

Our policy to attain these obectives has been set down in the Executive Order of Feb. 14 (which I have mentioned). In it, the National Wage Stabilization Board was directed in that Order to approve wage and salary increases which are consistent with the general pattern of wage or salary adjustments already esthere is no such general pattern, the Board may approve increases to eliminate gross inequities between related industries or plants, to correct sub-standards of living, or to correct disparities between raises in wages or salary rates in the units concerned and increases in the cost of living between January, 1941, and September, 1945.

Prevent Unregulated Wage and Price Rises

One of the principal purposes of the Executive Order is to prevent the unstabilizing effect of unregulated wage and price rises. Hence the Stabilization Administrator has been given the authority to provide, by regulation, that wage or salary increases of a particular class shall be unlawful unless made with the prior approval of the National Wage Sta-

crease is judged to have an unstabilizing effect.

To assist in controlling the effect of wage increases or price rises, the Executive Order provides that wage increases granted by employers without the approval of the Wage Stabilization Board cannot be used by these employers as a basis for asking an increase in price or rent ceilings.

All arbitration awards and all recommendations made in the future by publicly appointed factfinding panels, with respect to wage or salary issues, must conform to the standards of the new Executive Order. No wage or salary increases shall be put into effect in accordance with such awards and recommendations until they are approved by the appropriate stabilization agencies.

I am firmly of the opinion, and am sure that you will agree with me, that the provisions of the Executive Order of Feb. 14 which I have briefly outlined to you will prove to be of assistance in maintaining a stabilized economy during the transition period until production can eliminate the threat of inflation.

On Threshold of Volume Production

Estimates of industry show that we are on the threshold of volume production in many reconverting industries. Physical reconversion of plants is almost 100% com-plete. I think you will agree with me that the Government's program of "getting itself out of business," and in decontrolling, has been a potent factor in accomplishing this so rapidly.

The Government plunged, immediately after VJ-Day, into the greatest liquidating operation in history-closing out the war. sixty billion dollar munitions business is being largely wiped off the books We are closing out and settling contracts, clearing out some plants, selling others and disposing of surpluses.

A year ago, we had a sixty billion dollar munitions program and procurement averaged about billion dollars a month. After five the defeat of Germany, we slashed production goals sharply down-wards. After VJ-DAY a wave of contract cancellations cut munitions procurement to a half billion dollars a month. The few remaining munitions schedules are under constant review, and procurement rates will continue to drop. As an illustration, motor vehicles next June will be bought at the rate of only 3/10ths of 1% of last July's rate.

The change-over of plants from war to peace has been facilitated by the prompt removal of government-owned property from war plants. This has, in almost all cases, been done within 60 days after a request has been made.

Paralleling contract termination in importance and far outstripping it in magnitude is the task of disposing of the government's vast holdings of surplus war goods and property. Regulations for the tablished in an industry. In case disposal of surpluses have been completed and the problem now is primarily one of merchandising. About 43 billion dollars worth of goods and property will be de-clared surplus by the end of 1946 and another 7 billion dollars worth will be turned over to disposal agencies in 1947. Of course a great part of this vast store will be instruments of war such as ships, planes and munitions that will have no civilian use.

Selling this property calls for energetic use of practically all the commercial methods of nation-wide selling.

The Surplus Property Administration established basic policies and procedures for the handling of surpluses, and the War Assets Corporation has now taken over the disposal operation.

Disposal of the war-built plants and other facilities — some built were a root cause of the Nazi rev-with private funds, the majority olution in Germany. Sustained

bilization Board, if such an in- owned by the government - are potentially a valuable national as-Naturally, the construction during the war had special characteristics. Aluminum and magnesium production, for example, was increased, not only in response to a high level of industrial activity and to new uses for those metals in industry as a whole, but also to meet the purely military demand for planes and bombs. Thus a considerable amount of conversion and adaptation is needed to fit all these facilities into our peacetime industrial structure, but most of them can be used in one way or another, and their integration into our economy is an essential step in putting men to work and producing the goods we need for a higher standard of living.

Effect of Reconversion Measures

The effectiveness of the reconversion measures I have described can be measured in statistics of our national production.

At VJ-Day, goods and services being produced in the United States at an annual rate of just over 200 billion dollars, nearly half of which was for war. The war share of output has fallen tremendously while the civilian production has risen very rapidly, with the result that total national production stands at about \$180 billion. We are now producing for our civilian market at a rate of \$20 billion more than we were five months ago.

But while we have more food for our tables, more gasoline for our automobiles, more of many kinds of consumer goods than we have ever had in our history, we severely lack other products that we need and want. Housing, for example, is our most serious It is so serious that shortage. only a bold, imaginative program such as the one prepared by son Wyatt and announced by the President could hope to come anywhere near meeting the need.

Most consumer durable products - automobiles, refrigerators, washing machines-have thus far been produced in quantities adequate only for show-window display. The very real progress made in converting our industrial plant has not yet shown itself in output. I hope that the events of the past week will remove the barriers to full production and that we'll begin to get the full effects of the magnificent job that business has done in switching from war to peace.

The backlog of consumer needs and the tremendous pool of savings which has been stored up during the war is a new dynamic factor in the life of the American people. The level of national consumption right now is the highest it has ever been in any peacetime year and there is every indication that it will go higher.

We must realize, however, that this immediately favorable situation is in some part caused by deferred demand. It is not necessarily in itself a permanent part of our national life.

We are shaping our economic policies during the transition to take advantage of this situation. Although, for the moment, the pressure of demand is inflationary, we can turn it to our advantage by generally holding the price line and by encouraging the rapid increase of production to meet this ready market. We can use the pressure of this demand acting on our free business economy to expand our produc-tion to a level of full employment.

Deferred Demand Will Slacken

We do not know how long the deferred demand will maintain a level of full employment, but one thing we do know: The time will come when this deferred demand will slacken and we shall once again face the deflationary problems which beset this and other countries in the 1930's, and which

prosperity can be assured only by a high level of demand supported by high current income and not by deferred needs which are supported by accumulated savings.

We must make sure that our policies in the crucial war-topeace change-over will not only assist us to achieve full production and full employment during the immediate postwar period but of inflation. also that they will assist us to maintain production and employment in the future on a steadily rising level without the extreme fluctuations of the past.

In the long run, the development and maintenance of a market for our production must be the yardstick we apply to all policies during the transition. What we do in the next year or two will, in a large measure, determine whether or not we can avoid another 1929 collapse.

Four Point Program

You men, as leaders of this great industrial community, are vitally interested in the plans and poliwhich the Administration proposes to put into effect to accomplish the goal of successful reconversion.

I believe that you can expect that the Administration will proceed along the following course:

The Government will hold the line on prices, because runaway inflation would be disastrous to worker, farmer, businessman and consumer alike.

The Government will maintain The Government will maintain troit is "Let us go back to work. direct controls as long as they are Let us do the job together!"

necessary to break production bottlenecks and to assure adequate supplies for essential reconversion purposes.

The Government will continue to play its present role in the readjustment process by assisting business and labor to break bottlenecks and, above all, by stabilizing the general level of cost and prices as long as there is threat

And finally, the Government will take such measures as are necessary to deal with urgent special problems which threaten the smooth course of reconversion, or constitute a danger to the health and welfare of the people-such labor-management relations and the housing shortage.

These will be the steps of the Administration, but the full responsibility for production must be assumed by American industry and labor.

These two, working together with the cooperation of the Government, will be an irresistible force in overcoming the problems of the months that lie ahead. It is unthinkable that, after joining together to prevent destruction of our form of free government by an enemy outside our country, industry and labor would fail now in meeting the challenge of these times. I know that management and labor are both anxious to be at work-for ahead of us lies the greatest era of plenty this or any other nation has ever known. closing, my message to you in De-

Preventives of Inflation

(Continued from first page)

alone foreign, needs are and will or nearly twice as much as in continue for an indefinite time to be far short of demands.

Accordingly, there can be no doubt that the Emergency Price lars, are added to these resources, Control Act of 1942 should be ex--tended for a sufficiently long period to enable production to become reasonably correlated with come, there can be no doubt that demand.

Price Control Last Bulwark

Price controls, however irksome and difficult to adjust, are virtually our last bulwark against increasing costs of living. This is so because of the extent to which we have removed, reduced or avoided other wartime control mechan-We did away with WPB and its allocations of scarce materials and its construction permits. We discarded the War Labor Board and its wage controls. Rationing has been largely abandoned. The excess profits tax has been eliminated altogether and individual income taxes have been reduced. The work week has been sharply cut down. We have avoided adequate measures to curb speculation in capital assets, particularly in the real estate

Because we have discarded, diminished or avoided other controls, while incomes have remained very high, it is all the more urgent to retain the Price Control Act until this country's immense cademonstrated during the war, brings about an equilibrium between the income and savings which people have to spend and the availability of the goods and services they wish to buy.

Wants No Addition to the Money Supply

ie i- ie gne e- ss c-it.

ne a

Ш

er ch v-

What is the money supply today? Measured by demand deposits-that is, checking accounts and currency, the general public (excluding banks, insurance companies, etc., but including Treas-ury deposits) has available in demand deposits and currency over 125 billion dollars, or more than three times as much as in June of 1940. In addition, the public holds another 100 billions of Govern-

June, 1940. To the extent that dollars borrowed by our people, or foreign owned or borrowed dolthe inflation potential will become all the greater. Even allowing for a larger postwar national inon the money supply side of the equation the total today is nearly five times the amount prior to the war and is, at present, vastly in excess of available goods and services.

It is important to understand how such a tremendous increase in the money supply came about because the process should be stopped and, if possible, reversed, now that the war is over. Necessary as it is to retain price and other essential controls for a while and to clear away obstacles, particularly wage and price disputes, that prevent or reduce vitally needed production, these objectives need to be accompanied by an equally strong determination that the Government shall not add further to the money supply.

There is not a sufficiently widespread realization of the fact that our money supply expands through borrowing, whether by private interests or by Government, from the commercial banking system, and that, conversely, the money supply contracts when pacity to produce, so amazingly Government bond holdings are reduced. To the extent that we failed to cover the costs of the war by taxation or by borrowing from the general public, we relied on the banking system to furnish the money. Thus, between June 30, 1940, on the eve of our defense program, and the end of 1945, the Government raised over 380 billion dollars. Of this, 153 billions came from taxes, or only 40%; 228 billions, or 60%, came from borrowing, and of this, 133 billions, or about 60%, came from selling Government securities to others than commercial banks and Federal Reserve Banks, while 95 billions, or 40%, was raised by selling Government securities to the commercial banking system, a process which created an equivalent amount of new money.

swollen our money supply, is a primary source of inflationary pressures at this time and will continue to be until goods and services are available in sufficient quantity to balance more evenly the factors of supply and demand.

Calls for Balanced Budget

It is evident, therefore, that on the money side of the inflation problem, the Government should stop and, if possible, reverse the process whereby it creates bank credit. It can stop further creation of bank credit by bringing about a balanced budget. It could reduce the existing money supply in two ways. One would be by paying down the public debt. The other would be by having the commercial banks sell some of their Government securities to nonbank investors. Since this should be accomplished without any increase in interest rates which would, in turn, increase the costs of carrying the Federal debt, it would be desirable to have the commercial banks sell some of their longer term holdings to nonbank investors and to have commercial bank holdings more concentrated in shorter term securities bearing a lower rate of interest.

Stopping further monetization of the public debt in the banking system will tend also to stabilize interest rates so that they will reflect the volume of savings and investment funds in relation to demand instead of reflecting an increasing volume of bank credit. This, in turn, will help to reduce the inflationary effect that a combination of increasing bank credit and decreasing interest rates has on all capital assets.

Wage and Price Policies

Policies dealing with the money side of the inflation equation need to be accompanied by wage and price policies on the other side of the equation that will make for rapid achievement of a high level of production on a permanently sustainable basis. Wage increases can only be justified when they can be met out of increased productivity and profits without increasing prices. Clearly, wage increases that result in price increases to the consumer are inflationary.

It has been contended that all price controls should be removed now in order to insure full production. Where price ceilings do not in fact afford a sufficient margin of profit to call forth production, they can and doubtless will be adjusted, but these instances are not general. To argue against all price controls is like arguing against vaccination on the ground that it is better to contract smallpox in the hope that you may recover from the disease than it is to take necessary precautions against contracting it while efforts are being made to eradicate the sources of the infection.

To the extent that we can deal effectively with the money supply and production factors, we will be getting at the root causes of the inflationary problems confronting the country today. Price controls, rationing, curbs on consumer credit or on stock market credit, and similar devices admittedly deal only with effects, not with basic causes of inflationary pressures.

In brief, prudent policy at this time calls for measures to get at the fundamental inflationary causes by curbing or reducing the money supply on the one hand, and by increasing available goods and services on the other hand, and meanwhile retaining price controls, reinforced where necessary by other restraints, until the factors of demand and supply can be brought into a better balanced relationship.

Unless we pursue such a policy, we run immeasurable risks in view of the inflation potential today. If we were to permit a

of their holdings. The consequences could be disastrous.

Proposes Tax on Speculation

In the course of his testimony following the above statement before the House Banking and Currency Committee, Mr. Eccles was asked by Representative Wright Patman (D. Texas) regarding his previous proposal to levy a heavy tax on speculation in securities and other capital assets and to extend the present holding period beyond the present six-month period. To this Mr. Eccles replied as follows:

Mr. Eccles: Before the Senate Banking and Currency Committee, when this question came up, and I have made the same recommendation upon several occasions in connection with the work of the Stabilization Committee, the Economic Stabilization Board, of which I am a member, an advisor, And in this statement that was released to the press-I happened to bring a copy of it along, thinking this question might come up this is what was said:

"The most effective way that I know of to curb speculation in capital assets would be to increase substantially the rate of the capital gains tax, or the holding period, or a combination of both. For a long time I have advocated enactment of legislation to this end as a temporary protective measure applicable to all future purchases. This would not deter the selling of assets held at the time that the measure was introduced in Congress, but it would greatly deter buying for the speculative rise after that date. It would not affect the purchase of capital assets of any kind which have been or are being bought for personal use or a long term investment, rather than for the speculative rise.'

Mr. Patman: I recall that testimony, and I think you are right about it. I think one of the greatest mistakes we have made was reducing taxes so soon and so much, and I think we should have gotten more as we went along, and I think we should have increased the capital gains tax for the reasons which you have suggested there. It would have been

Flight of the Dollar

Now, one other thing and then I will be through, Mr. Eccles. You mentioned that if we did not curb inflation, that there would be a flight of the dollar. people would use their liquid assets to buy things. What do you suggest they would buy? Stocks, real estate, and things like that? Things that might increase in value along with the decrease in value of the dollar?

Mr. Eccles: That is right. That money, or debt forms, such as mortgages, bonds, Government and otherwise, are, of course like money, and their value diminishes with the decline in the purchasing power of money. I do not mean their price declines, but I mean the dollars they are payable in decline. So that people are al ways looking for a hedge against inflation, and the stocks—preferred and common-real estateall kinds, farms, homes, business properties - and commodities, of course, are a way to hedge against inflation, and the records in Europe, where there has been an excess supply of money and scarcity of goods available, such as is the condition today in most of the European countries, show that there is a great pressure for prices to go up, and I think that our stock market, our real estate, homes, farms, and even commodities that can be bought, could skyrocket if this price control act were not extended, and vigorously enforced, and unless we maintain taxes and balance the ment securities—or eight times as lent amount of new money. sharp rise in prices to occur, the maintain taxes and balance the much as in June of 1940—and This tremendous expansion of holders of liquid assets might budget and maybe pay off some nearly 50 billions of time deposits, bank credit, which has so greatly lose faith in the purchasing power of the debt and unless we stop

the banks from creating additional money.

Those are, I think, the things we must do to stop this potential from being effective in its inflationary effect, and to cause the public to maintain the confidence that they have today, and justifiably so, in our money. And to the public, money is savings accounts, Government bonds, insurance policies, retirement funds, and so forth. And it seems to me that we have a terrific responsibility-this Government has-to see to it that those funds, those investments in insurance, and in savings, and in Government bonds, are protected and that their purchasing power is protected.

Extent of Inflation

Mr. Patman: What do you consider the value of the dollar to be today compared with the period immediately preceding our entrance into the war?

Mr. Eccles: Well, of course, there is a good deal of argument as to what our inflation has been. Measured by the increase in the cost of living, I think the Office of Price Administration figures that it is about 30% inflated. Which is as good a job as any country has done. I think maybe Canada has done, if anything, a little better job than we have. But with other countries, there has been a greater inflation than that. I would expect that with increased wages and prices on your new wage-price policy, that we will get some further increase. It is estimated that there is a possibility of it reaching as high as a maximum of 40% would think, if the cost of living can be held to 40% above the prewar level, that we will have done a fairly good job considering the size of this public financing that has been undertaken.

The Housing Bill

Mr. Patman: You were not here when we were considering the Housing Bill, which is considered an anti-inflationary bill. Have you given consideration to the fixing of prices on existing homes?

Mr. Eccles: Yes. I have been in a discussion or two where that matter has developed. The difficulty with that particular field is that it is a job of enforcement. Theoretically, I think it is fine, if it could be made to work. But the job of enforcement is going to be a particularly difficult one. Of course, as I understand the proposal, it is to freeze the price of a home after its second sale.

Of course, that would keep the home from being sold a second and a third and a fourth time for speculative profit, but, of course, it would not keep it from selling at an inflated price the first time.

Mr. Brown: Now, I do not know a home anywhere that you could get as much for as it would cost you to buy the lot, to buy all the materials, and pay the high cost to carpenters, that you could not rebuild the same house for what you can get for it today. I do not know of any anywhere in my section of the country that would bring as much as it would cost to construct the same house. Therefore, building materials and the construction of new houses will absolutely control the sale price of old houses.

Mr. Patman: You mentioned these sales. Was not the second, third, and fourth sale the principal cause of inflation during the last war, Mr. Eccles? That a real estate dealer would sell the home to the family, and the family would hardly get located until the dealer would go back to him and say, "Now, get your thousand dol-lars profit on this," and they would keep on pyramiding them that way. Was that not one of the main reasons and one of the principal causes for inflation in housing after the last war?

Mr. Eccles: I think it is a factor, (Continued on page 1128)

Preventives of Inflation

(Continued from page 1127)

and I think it is a factor mon, as will continue to be a factor, and, therefore, the proposal, to the ϵx tent that it does stop the multiple sale of the same house, is of some value and effect.

Capital Gains Tax and Speculation

Mr. Patman: You do not know of any better plan, do you, Mr. Eccles:

Mr. Eccles: Well, I think that capital gains tax might be a good plan. In other words, I do not see any reason why we should discriminate against the homes in favor of stocks and business properties and farms. They are all capital assets. And to the extent that you shut the door in one field, you may tend to stimulate it in another, and it would seem to me that the most practical way to get at the inflation of homes, as well as farms and business properties, and stocks, is to take out this speculative profit for the rise, that people who are in the high income brackets are buying for the rise, because, after holding for six months, they can then sell and pay only a 25% tax.

We have left the door wide open tax on.

and there have been simply millions and millions of dollars made by speculators. are doing everything we can to encourage speculation in capital assets, and we have done absolute nothing to stop the specula-

Mr. Patman: Well, I do not agree with you. We are not doing We are not everything we can. doing anything to encourage it. We are just failing to act to stop

Mr. Eccles: Well, that is possibly a better way to put it. In other words, we have done nothing to stop inflation in capital assets.

Mr. Brown: Then, you say that if they put a ceiling on existing they ought to put it on farms, bonds, and have everything treated alike?

Mr. Eccles: Well, as a practical matter, you cannot get at it by putting a ceiling, it seems to me, on stocks or bonds, or farms. It would be even more difficult than it would be with homes. What I am saying is that they are all capital assets, and we should stop speculation by extending the holding period, and putting a special

Investment and Money Market Outlook

(Continued from page 1086)

interest rates and inflationary or deflationary tendencies. The Lam not going to tell you every Treasury cannot find buyers for answer. I will hit what may seem goods in this country but it can create a buying sentiment. cannot find buyers abroad but it can take a stand that may provide the means of making foreign nationals potential buyers. You, your firms and every other person and firm, businessmen, investors or unskilled working people, are subject more than ever before to the acts of the financial and economic departments of the United States Government because they set our fiscal policy.

After World War I we had a debt of 25 billion dollars with the average cost of money to the gov-The Liberty ernment of 4.18%. Loans were successful largely because people borrowed money to buy "governments." With the inflation, caused by World War I and with the general scarcity of manufactured goods and some raw materials following the armistice, business, banks and individuals borrowed again up to the limit to buy and later to speculate.
Today World War II has ended

with a United States debt of nearly 300 billion instead of 25 billion, a sum raised through investing income or selling to buy but not through borrowing. The cost to the government of the money raised is 1.95% instead of 4.18%. Banks are borrowing practically nothing as against heavy borrowing after World War Corporations are borrowing relatively little and while signs of speculation are evident by individuals it is and has been largely on a cash basis.

The chemical industry has become a veritable fairy story to the general public. What it cannot do today it will do tomorrow. The old products of the chemical industry are scarce and the new products are awaited with bated breath. The public is interested in chemistry; they want to have a hand in the development. They do this by

investing in it. How, then, will you obtain money for improvements, expansion and inventory if you have not already obtained it through earnings and what will it cost you? Should you step in now to borrow or wait? If you have money to invest should you invest now and in what? Should you undertake equity or bond financing?

In twenty minutes' alloted time to be only fundamentals.

Low Interest Rates to Remain

For nearly fifteen years I have preached that money rates are going to remain easy. I would not mention this now if I had not been That is retrospection. In he future I believe rates are gong to remain easy and I am not aying how long the future is but it will be long enough to produce trend. This statement is made because if the government wants o keep its expenditures down, as t does, with respect to the cost of its debt service it cannot let interest rates rise materially. This service costs about 6 billion a year now. If we retire the debt to the limit presently believed practical so hat we will have none in 100 years from now that will cost an average of 3 billion more, or 9 billion total debt service annualy. Debt retirement from income means, generally speaking, a growing scarcity of investment medium which means, generally speaking, rising prices or lower interest rates. We financed World War II at 21/2% for the longest naturities. Since the war we can ell long bonds at lower yields than that

Debt reduction is deflationary. generally speaking. On the other hand greater ownership of the flationary and that is a continu-Deflationary ing phenomenon. tendencies eventually produce less industrial activity. I am not considering deflationary tendencies to that extent by what I have said but if the level of business did recede and employment did fall off for any reason, from the standpoint purely of the banking system some part, perhaps a large part, of 28 billion of currency would return to the banks. This has the same effect as though gold was shipped in from abroad. It increases the excess reserves and increases the potential investment capacity of banks. It is hard to find a reason for believing money rates will change upward in the immediate or near future to any appreciable extent. Personally, I believe interest rates should not be lowered, a tendency prevalent today. Without some manufac-

continue for some months unless I miss my guess. I like to add that hedging phrase even if I have been right for fifteen years. Some minor brakes may be applied, and a nope they will be.

Equity Capital Available

I personally dislike a stock market rise that becomes spectacular enough to bring in the bellboys and the chambermaids as speculators. We are in some danger of this happening today. I consider the recent rise, however, has been justified by legitimate demand based upon reasonable expectations. A temporary slump would not today be exaggerated by margin calls from banks because the market already is largely on a cash basis. We have not felt the earning power of industry from peace-time domestic and foreign consumption. It is not too easy to judge the effect today even if strikes and reconversion problems were eliminated. I hope the stock market waits for facts from now on. I doubt if the speculative interest is great enough today to carry it on blindly. However, if a sound industry needs equity capital, it is my belief it can expect to obtain it at satisfactory cost for some time to come because the investment funds are plentiful and will undoubtedly remain so for a considerable time, if not longer. This means equity financing, if sound, can be accomplished at reasonable cost.

I have been talking about something I know a little about. I have stuck my neck out pretty far but I am willing to leave it there. I have not given you a scientific dissertation by reciting detailed facts and enumerating all possible angles of the problem. It has been my experience that very few listen to such details after dinner.

Now I am going to talk about allied subjects which I do not know much about and you do not either. Nobody does.

Foreign Investing

We must give more thought to the foreign peace-time situation than most of us do. Nearly every businessman has an inherent dislike of loaning a sum of money directly or through an international bank with not too good a chance of getting it back.

It is my belief that the only way that Americans can realize what we must loan or even give away is not only through pricking their humanitarian consciences but more generally by explaining their own interlocked interest in loans or grants.

One European ambassador from a rather unique country has told me that they do not want money or loans, they want American industry to start branches in their own country. Let us consider this.

I do not believe in a loan which directly or indirectly will be used for the purpose of rebuilding or building an industry in a foreign country unless the industry is to be efficient. I, however, believe in the necessity of starting some industries producing and I believe in the necessity for monetary stabilization loans. I personally believe in American industry helping in rebuilding foreign industry. That sounds both good and fantastic. Which is it?

I am self-centered enough to believe that in production involving small profits with large distribution and involving chemical and mechanical technique of the highest order, that Americans are very generally supreme. I believe they are supreme in devising means of cutting costs to make otherwise unprofitable ventures profitable. If that is so, then I see disadvantages in pouring money into foreign industrial enterprises cannot survive except through lower standards of living or higher tariff barriers or import restrictions.

tured brakes this tendency will tages in corporate dollars invest- supplied for stabilizing currencies man's goal.

ing in foreign subsidiaries, but they are not insurmountable

Take any average necessary chemical industry, for example. They are naturally now more concerned with the domestic demand of today than of the foreign demand of the future. They may set aside certain small percentages of their production for foreign consumption to supply necessities abroad. There will come a time when greater attention will be given to foreign markets. what will the capture of these markets then depend? It will be dependent upon the prosperity of that country, its ability to create foreign exchange through exports (not all to America), its ability to obtain credit, its ability to create internal buying power through an increased standard of living. There are, of course, other conditions to be concerned with. It will be dependent upon what I am told Disraeli said to Queen Victoria when in substance he declared that if England was to be prosperous the rest of the world must be made prosperous.

Foreign Subsidiaries

I am now saying to you that a subsidiary of the X Chemical Company commanding a high credit rating can be built in a naturally suitable area abroad. with readily obtained American dollars. It can obtain some local equity funds now and should provide that these present payments are merely partial payments on a still greater local investment up to a substantial percentage of the total investment, retiring the American dollar investment proportionately when, as and if the dollars are found, either after stabilization loans have made exchange possible but preferably through foreign exchange created by the enterprise itself.

Now I realize that you can perhaps tell me that this is a layman's view of the chemical or any industry and therefore bound to be wrong. I merely summarize my remarks in reply to that by saying: If a well-organized, American-staffed in the higher brackets limited company is organized in a proper area abroad with American dollars to build or buy it, controlled at present by a parent company in America but substantially owned by local interests purchased with local currency in full or in part, you can eventually have a well-run company employing local labor. You should under such a set-up get fair tax treatment locally and avoid confisca-

If this company is therefore efficient, it may start well but with a part of its equity capital paid in local currency and possibly not immediately exchangeable. Therefore if the standard of living is still low and the currency is stabilized at a rather low rate it certainly should beat local competition and compete very favorably in foreign competition. It should have some advantage in obtaining raw materials in world market over purely local business. I say that if local markets are reasonablly good they presumably will be while scarcities exist at least it can make money in terms of local currency. If costs of operation rise because of payroll increases, the standard of living is going up. The country is then getting prosperous and local buying increases through the increase of natural, not artificial, causes as it well may begin. If equity purchased by local people in local currency and earnings in local currency pile up, a well-run company can obtain foreign currency by competing in world markets and help bail itself out. If it cannot then UNO funds, international banks and other stabilizing media have failed. It will not fail if efficiently-run industries are

will fail in time if inefficient oldworld business operations too scantily financed are set in operation, for such cannot compete in the world with modern machin-American technology and U. S. dollars.

Without some fairly general movement such as this, I believe not only will we be advancing money through the UNO with only a slight hopse of return but we will be building up a resistance to imports into this country and a resistance to imports into foreign countries. We will continue on an artificial exchange basis in most countries and we will see a hopeless struggle for existence in many countries abroad that augurs ill for world prosperity.

American Business in World Wide Production

I believe that world prosperity can come with American business having a direct finger in the production pie all over the world. I believe this is the way to share in world prosperity and not count on sharing in it solely through. increasing our sales abroad. This proposal can of itself develop the increase in our sales abroad, and our buying abroad, the latter without pain. Labor will continue to gain as labor always gains the more nearly the world prospers. It is a fallacy to say that American labor should work wherever American dollars go.

I have always felt that it was good business to risk capital even in a new enterprise if the management was sound and experienced and the enterprise soundly capitalized but I have always felt it was poor business to loan money when I knew in the beginning that the borrower did not have enough capital even with my loan or did not have top-flight, experienced management. Our government is going to provide, or help provide the means, in a major way, of putting second-rate management into probably inadequately financed business abroad. I agree they cannot in many instances do less unless enterprising American industry steps in and puts foreign production on a sounder basis. American business, generally speaking, can get American dollars for enterprises conducted abroad which it controls. Foreigners cannot do the same for their own industries, generally speaking, and often do not deserve This may seem like pure American boasting. I admit this but I do not call it boasting.

Lending to Nations Unable to Repay

I am for helping countries that need help to make them prosperous. I have heard of a bankrupt company borrowing itself into prosperity but I never put my own money into one. I dislike the idea of putting a foreign country and foreign nationals in the position of borrowing from us beyond their means to repay. We are not popular now abroad in many places. We will be less popular if we lend less than is wanted or needed. We will be still less popular if we require a payment of principal when it is not convenient to do so and it almost never is. I do not like to see America more unpopular and I see no necessity for being as unpopular as we are. I have never seen the government at home do as good a job of building business as private industry can do and I now apply that rule abroad as well, This is a business problem we are facing.

If business could be efficiently handled over most of the world, most of the world would eventually be reasonably prosperous, barring wars. Then America too. would be more prosperous. That located in what are today finan- is not a Utopian dream; I think it I see many present disadvan- cially paralyzed countries. Funds should be a hard-headed business-

OPA Will Hold the Line

(Continued from page 1087) spectable groups in our society as action to new houses priced at bankers were subject to the shafts \$10,000 was violent enough to be and barbs of dissent and disunity. I am perfectly willing to concede that today we are served by no one but good bankers. I am ready to subscribe to the view that all the bad and evil fellows in your business have died off or have been paroled and are out of the business. I am willing to adopt the philosophy of that great statesman of the pre-civil war days from Missouri, the fiery Thomas Hart Benton, who was asked, when his long-time political foe, John Calhoun of South Carolina, had died, if he intended to pursue him beyond the grave. Senator Benton's response was as emphatic as it was magnanimous. "No, sir," he said, "when God Almighty lays his hand upon a man, I take mine off."

I suspect that you have already surmised that the reason I have been dwelling upon bankers is to keep my mind off OPA. As I have indicated, I have been receiving a lot of advice recently. Going forth to battle inflation, one friend called me and repeated the injunction of the Spartan mother to her soldier son: "Return with your shield or upon it." And while I go into the battle with determination, I do not bring a doctrinal attitude. It's not that kind of fight. There is no place in this fight for stabilization for labels, for banners of the left or the right.

Policy Adopted

According to one suggestion I have received, I should become a kind of a concessionaire for inflation, handing out exemptions and price increases gaily and freely just to make everybody happy. According to another, should adopt the platform of Rehoboam: "And now whereas my father did lade you with a heavy yoke, I will add to your yoke; my father chastised you with whips, but I will chastise you with scorpions." I propose to follow neither of these courses if I can help it, but to attempt to utilize necessary controls to expedite production without the sacrifice of stability. And I believe it can be done.

Permit me to emphasize that in spite of what you may hear to the contrary, OPA is not in re-ceivership. I have not assumed the job of a liquidator. OPA is a going concern with a faithful and loyal staff that has done much for America and is going to do more. I have undertaken a quick inventory during these past 10 days. I have tried to find out just who is opposed to price control and rent control and to determine in a general way just what OPA has been up to. Let me give you some of my preliminary findings.

First, just who is opposing price control? Most people know that existing inflationary pressures are going to be hard to handle. That's the very reason why this is no getting pay checks than in 1939. time for crepe-hanging. We can control inflation. The record of the last two and a half years shows that very clearly. Of course, from here on out it's going to be a tough job. But doing that job won't be nearly as rough on any of us as what we will go through if we don't do it.

I'm sure bankers know that the least expensive way out of the dangers we face is to make price control work. In fact, one of my great comforts is that the American people know that too. They are overwhelmingly for it. Opinion polls such as Gallup's show that about three-fourths of the people want price control until supply and demand get safely back in balance. Less systematic newspaper and radio polls show about 90% of the general public favoring controls as long as they are needed.

It's not the veterans who are

plain that there was going to be very few houses sold to veterans at more than \$6,000.

It's not the farmers. They are disturbed about the continued need for subsidies. But they know that the supply of most farm products is much more nearly in line with demand than most of the things farmers buy. Removal of price controls now would shoot the prices of machinery, trucks, fertilizer, and household equipment out of sight.

It's not the thousands of small businessmen. Most of them know that they could never compete for fair shares of limited supplies if inflation undermined the value of their small financial reserves. They know that inflated prices mean fewer sales and uncertain markets. They know that they could not plan either production or delivery schedules that way.

It's not organized labor. They have always been among the most outspoken about the need for keeping prices at levels that let wages buy shelter, food and health services. They know that inflated prices force people to buy less. They know that when people buy less, jobs disappear.
It's not the insurance companies.

They know very well that people are not going to buy insurance policies that are apt to be paid off in cheap dollars. Insurance companies have spent millions of dollars on a tremendous program of anti-inflation ads and news-

It's not the bankers. They know too much about the hazards of making loans to finance enterprise at inflated costs. They know too much about the loans that can't be collected when inflated prices crash. They know too much about what happens to the volume of bank loans when deflation puts enterprise in the doldrums.

This doesn't leave very many to oppose the idea. But there are some critics who seem to want to pawn America's future for a pot of paper profits. Let's take a look at what they say.

Criticisms of Price Controls They say that price control interferes with production. This is nothing new. We have heard it over and over again. We heard it back in 1941 and 1942 when price control was supposed to be throwing a monkey wrench in our war production machine. But during the war, with price control production more than doubled. During World War I, with practically no price control, production rose only 25%.

Tonight, just five months after V-J Day, both employment and production also stand at record peacetime peaks. Production is 51% above 1939. We have 6½ million more people working and

We are all disturbed by the problems that complicate reconversion. But we have moved ahead on a much bigger reconversion job this time more rapidly than we did after World War I when

opposing price control. Their re- the job was much smaller. Last November, just two months after the inevitable post V-J pretty revealing. They made it slump, production began to climb upward. It has been going up ever since.

> "Price Control Aids Production" As a matter of fact, the record of the stumbling blocks that smashed us into a depression after World War I shows pretty clearly that during abnormal reconversion conditions, price control actually aids production. Without price control speculators hoard both raw materials and semi-finished parts to be sold later at higher prices. Hoarded materials and parts don't get on assembly lines and store shelves. This creates artificial shortages. Production lines are slowed up.

Hoarding and speculation in-flate production costs still more rapidly. Producers cannot predict what costs will be next month. What is equally bad, or worse, no producer knows how soon prices will become so high that buying will slump. No one knows how big his market will be. Big volume production becomes more and more of a risk. This is far from a climate that encourages investment of time and money in expanded enterprise.

Such conditions are especially tough on the thousands of small businesses on which democratic, competitive America depends so much. Most of those firms have small reserves with which they plan to finance peacetime production. Inflation cuts the value of those reserves. As costs rise they are less able to compete for their fair shares of materials and parts. Inflation knocks them out before they can get started.

This is exactly what led the way to the smash that followed World War I. Finally, just what has OPA been up to during the war and since V-J Day? OPA is supposed to be driving business into bankruptcy because it is inflexible.

Let's look at the facts.

Has Price Adjustment Program All during the war OPA had a broad price adjustment program. Of course mistakes have been made. But ever since the General Maximum Price Regulation was issued in March 1942 a large part of the price control program has been devoted to making adjustments in accord with OPA standards

Since V-J Day OPA has set up a complete adjustment program for reconversion industries and modified all of its adjustment provisions to fit the needs and objectives of the transition period.

Since V-J Day OPA has made 459 industry-wide adjustments. It has also made 4,788 adjustments for individual firms. The new wage-price policy speeds up this procedure. In effect, OPA has always had a floor under profits. Whenever any industry can show that its earnings are below peacetime levels it gets a price adjustment.

A look at the profits of various types of industries completely shatters any claim that price ceilings have made production unprofitable. Because of tax adjust-(Continued on page 1132)

OPA Will Hold the Line

ments made in 1946, 1944 is the last year for which we have complete profit figures. In 1944 corporation profits, both before and after taxes, topped all previous records. Before taxes, they totaled 24.8 billion. After taxes they totaled 10 billion-more than twice as high as in 1939. In 1944 industrial profits on the average were 450% above prewar levels. Wholesale and retail profits exceeded those of prewar years. The average increase for department stores was 609%

Big and small business alike shared in these increases.

Profits Will Be at Record Heights In 1946, with excess profits taxes repealed, it is expected that profits after taxes will be at record heights.

The overall effect of price control on business can be measured by the trend in business failures. In 1945 business failures reached an all-time low of 810 as compared with 14,168 in 1939. Of course, no one claims that price control is what has cut failures so drastically, but the figures certainly show the claim that price control has caused bankruptcies to be absurd.

Recently these general charges have been camouflaged into an argument that might at first appear rather plausible to anyone who was not a banker. This argument concedes that overall stabilization is necessary. But just a little inflation would stimulate more productionn because there

would be more profit.

If America was made up of isolated units this argument might have some merit. But one of the big facts of our modern specialized economy is that most groups are inseparately interrelated. One man's price is the next man's cost. Throughout the price control program experience has shown that many necessary price

this cost absorption principle has been the very keystone of the price control program. But now if we applied the principle of "a little inflation" freely across the board, we would soon be riding far beyond the capacity of most producers and sellers to absorb. Then price increases at one level would be passed through all other levels right on the retail stores. Living costs would go up. Terrific pressures would soon push wages up. The inflationary spiral would be loose. That would be very bad business.

Bankers have always played a leading part in the saga of America's progress

They have financed the proud forward moves of America's pio-On the way we have learned how to use science and trained men and automatic ma-chines to produce the world's best living standards here at home and at the same time help other parts of the world profit from the gifts of the power age.

Inflation Cannot Bring Normal Prices

Now there come a few prophets of doom mumbling that we have reached the end of that big production road. They say the only way we can proceed from here on out is to devalue America's big earnings and savings. They say we'll have to water down the value of America's insurance policies and investments. They say that the war left us with so much money that we'll have to let inflation bring buying power and living standards back to "normal."

Since when has America ever 'settled down' to normal? Since when has America ever "gone back" to anything? Since when have there been too few pioneers to nurture new opportunities and set new records?

Of course, we now have too increases at one level of produc- much money to do business at

levels, or by sellers. The use of war standards. But on what authority, and in what spirit, do a myopic few say we Americans have ever solved any problem by chaining ourselves to past standards? Our war production record proves that there is no need to sidestep our present problem that way. It would be tragedy to call such a retreat a solution.

Of course we will soon have inflation if we use our huge warborn financial reserves to bid up the prices of things produced at prewar volume. That would jeopardize every investment, every savings account, every wage and every insurance policy in America. But we are not going to do it that way. America has its eyes on expanded markets and decent living standards for more people. We are going to use our big financial reserves to expand production. We are going to produce enough new capital equipment and new consumer goods to make every dollar of these reserves buy a sound dollar's worth.

Will Hold the Line

Let me assure you that we are going to hold the present price line and make that possible. But there's no point in kidding ourselves. The pressure against that line is terrific. We are face to face with critical dangers that inflation will destroy all we have and blast us into a future of limited markets, constricted earnings and needless poverty.

America made an investment in the war to save ourselves and the world from enslavement by the fascist gangsters-an investment of 300 billion dollars in money and the lives of 248,161 American boys.

To turn back now would result in wiping out that investment and would bankrupt us financially and spiritually.

Having been drafted for this post-war battle, I can only promse you that I will give it all that I have. I don't propose to let up until the tide of production has eliminated the threat of inflation and victory is ours.

In the meantime, I humbly suggest that we all keep our eyes on the main issues and not let diversionary tactics sap our strength. Perfection is a beautiful thing, but until that millenial stage arrives, I take courage from the words of Walt Whitman:

"We know well enough that the workings of democracy are not always justifiable in every trivial point. But the great winds that purify the air, without which nature would fall into ruin - are they to be condemned because a tree is prostrated here and there in their course?

Observations

By A. WILFRED MAY

The effect on corporate welfare of the new wage-price executive order, as interpreted by Mr. Bowles, is to reinstate the process of renegotiation in peacetime, in a manner far more unfair than was done on war business. Under the technique of wage-price-squeeze by administration, which will set prices and wages to conform to individual ceilings on profits, the fruits of competitive management ability will be emasculated.

But of far greater import will be the discrimination against individual businesses levied in correlation with the importance to them of their labor costs. In penalizing the giving of employment, the broad social interest is harmed. And in the long run, the policy will penalize labor interests themselves, in goading industry to escape to labor-saving inventions. It should be remembered that the technocracy movement thus received a great boost from the wage

squeezes following World War One.

This new "labor taxation" is likewise worse than wartime renegotiation, in that its administration—regarding both wages and prices—will follow political motivations in various phases.

Can Mr. Bowles' great peeve at the "irresponsible" NAM possibly be at all attributable to his knowledge that the latter's two million dollar advertising campaign for OPA dissolution was placed through the Benton & Bowles agency, his former associates?

In its behavior in the sweeping stock market declines, the investment and speculative community is giving another perfect demonstration of its habitual manic-depressive psychosis-that is, in successively interpreting identical events in diametrically opposite ways. This should be obvious from a brief perusal of the "reasons" advanced (ex post facto) for the sudden torrent of selling

The most-frequently stated cause of the break is "reversal of inflation psychology"—but the underlying inflationary forces, monetary and otherwise, surely are now just as potent as they were on Feb. 2 last when the stock averages hit their bull market highs. Prospective first quarter earnings reports are blamed-but recent quarterly showings were just as bad, and in any event it was recognized that the market was not capitalizing so highly the earnings of such a short period. The possibility of war with the Soviet is advanced as a market bugaboo-but surely our relations with Marshall Stalin are now no less dovelike than they were at Yalta, San Fran-

Objections to St. Lawrence Seaway

By HON. JAMES M. MEAD* U. S. Senator from New York

Senator Mead, After Reviewing Legislative History of St. Lawrence Project, Maintains That It Would Affect New York Ports Adversely, and Would Cripple Great Lakes Shipping. Says We Already Have a Surplus of Transportation Facilities, and That New Developments in Existing Transportation Will Increase Capacity 50%. Points Out Need of Protecting the Railroads and Shipping Against Cheap Foreign Competition and Contends That Because Seaway Would Be Closed Five Months of Year, Railroad Facilities Will Be Still Needed but Earnings Would Decline Greatly.

In the past you have heard from speakers who have represented labor or who have spoken for the shipping or the railroad interests or

of view of the manufacturer. I desire to speak to you today from the viewpoint of the legislator who looks to the hearings and and debates the record for the facts and for the justification of the proposals before him for determination. The record, to him, is

Sen. James M. Mead

like the testimony or the evidence before the judge or the jury. The legislator cannot be expected to be inti-

mately acquainted, from the point of view of experience, with the problems that affect each industry of the community he serves. But he can and must familiarize himself with the information that is presented to the legislative body to which he belongs.

In the matter of the St. Lawrence Seaway, the record is voluminous, it is of long standing and it has been presented to the national legislature on several occasions. On July 18, 1932, the Governments of the United States and Canada signed at Washington, the Great Lakes-St. Lawrence

The Financial Situation

Chester Bowles ought to take an extended vacation and give the long-suffering people of the United States a good rest. They need it. But before Mr. Bowles leaves Washington he might send some of his bright young assistants over to the Treasury Department and to the Board of Governors of the Federal Reserve System to gather together some figures on what is commonly now known as the money supply from which they might fashion certain charts for the enlightenment of the gentleman who appears to be under the delusion that he already knows all the answers. We assume that he must be wholly in ignorance of such things, for otherwise he could hardly have kept a straight face when he was talking to the House Banking and Currency Committee last week.

Mr. Bowles and "Purchasing Power"

Once such information is placed before him, we are certain that he would be interested in knowing how what he likes to call "purchasing power" in the hands of the rank and file of the people, ever reached such astronomical proportions. He certainly would want to be assured that the processes by which the staggering growth in these sums came about had now been brought to an end and, indeed, reversed. When he learned that nothing of the sort has been done or is apparently in contemplation, that, indeed, several programs believed by Mr. Bowles' associates-to say nothing of his "Big Chief"—to be necessary to make prosperity certain must, if given effect, continue the process of adding continuously to the supply of money—when Mr. Bowles hears of all this, he himself might feel the need of a rather prolonged stay in some quiet nook where he could "Declining interest rates and do some real thinking. When he had taken full advantage rising prices, both of which are of such an opportunity he would, we are quite confident, (Continued on page 1136)

holders and all other Americans International Aspects of St. Lawrence Seaway

By DEAN ACHESON* Under Secretary of State

Mr. Acheson Advocates the St. Lawrence Project as Developing One of the World's Greatest Natural Resources. Says It Will Promote National Security, Will Expand Our Power Resources, and Is Within Constitutional Powers of Congress to Construct. Holds Waterways Treaty With Canada Will Improve Our International Relations and That the Expenditure of U. S. Funds for Improvements in Foreign Countries Is Not Without Precedent.

The purpose of the legislation before you is to increase the of the United States by developing one of the greatest natural

resources in the world, the Great Lakes-St. Lawrence Basin.

The St. Lawrence Seaway is as old in its conception as the history of our country. The search for easy water c o m m unication to carry the commerce of the world led explorers and traders through this route 400

Dean G. Acheson

worked towards the development of a waterway from the Atlantic Ocean to the great farm lands and factories of the interior of our continent. The Seaway is not a new project. In fact the legislation before you provides merely for a series of improvements of an already existing inland waterway which are the logical sequel to the construction by the United States of such great works as the Mac-Arthur Locks at Sault Ste. Marie and by Canada of the Welland Canal connecting Lake Ontario and Lake Erie. Today the Great

Almost Incredible!

". . . The Ford company made a formal application to OPA for a 55% increase above the 1942 Ford ceiling prices.

"Let me again emphasize that this outrageous request

Henry Ford, 2nd

illustrates rather clearly what the public would be paying for Ford cars today if price controls were not in effect." Chester Bowles.

'Our application to OPA on last July 20 was made while we were still at war with Japan. Since fighting had stopped in Europe, the War Production Board decided that limited production of automobiles was in the public interest. A total of 39,910 was fixed by WPB as the maximum number of passenger cars the Ford Motor Company could produce during the last six months of 1945.

"Obviously you cannot make 39,910 cars in six months in a plant designed to produce more than 100,000 every month without greatly increasing production cost per unit. Low-cost depends on volume production, as everyone knows. So when the United States Government—not the Ford Motor Company—fixed production volume it thus determined cost and selling price.

"Let me give a specific example. We decided that 32,750 of the 39,910 automobiles permitted should be Fords. The rest were to be Mercurys and Lincolns. The limitation on quantity fixed our estimated cost on the most popular Ford model at \$991.57. The f. o. b. sales price, which included a 5% profit and the usual dealer commission thus became \$1.388.20. This turned out to be 55% more than our last peacetime selling price of \$895.

"We immediately filed application on prices for these low-volume, high-cost, wartime cars under OPA's wartime general maximum price regulation.

"This action had nothing whatever to do with peacetime price ceilings."—Henry Ford 2d.

Of course, Mr. Ford needs no defense from us.

But evidently the American people de-against any regime, any government, any official, any political party which permits any man to stay in public office a day after he has made any such fortuitous and disgraceful attack on a private citizen as this record shows Mr. Bowles to have done.

Are German Banks A Threat To World Peace?

U. S. Military Government Contends That German Banks Were Cornerstone of German War Industry and That In Order to Eliminate This Threat to Peace, the Military Government in U. S. Zone Has Taken Measures to (1) Denazify Existing Banks and (2) to Decentralize the Banking System by Creating Independent District Central Banks, With Reserve and Other Regulations as Applied in U. S. Says Plan Is Not Final Step in Relation to German Financial System.

Ask anyone what a country needs to prepare for a war. Most probably you will get a description of huge airplane factories, armament plants, railroads and many other industrial enterprises. Few people would mention the quiet, peaceful, little bank that operates on main street, as one of the important necessities of war preparation.

It is perhaps somewhat difficult. to see a threat to peace in a bank. | first step, now completed, was an There are no great hydraulic overall denazification of all bankpresses, no rows of gleaming lathes, no huge vats and coils. The clicking of adding machines and the murmuring of clerks is a peaceful sound. Yet, this citadel of peace and quiet is even more dangerous to world peace than the factories themselves. It is the corner stone on which the German war industry was built and of the banking facilities during operated. Today in Germany it the denazification was due to the is as important to demilitarize the energy with which the MG finance banking structure of the country, as it is to destroy her war-producing factories. A destroyed factory can be rebuilt. . . if money can be

To prevent this money from being found, Military Government in the U. S. Zone, has taken two U. S. Zone, Reports and Informasteps toward demilitarizing the fi- tion Branch, European Theatre. nancial structure of Germany. The

ing agencies; the second step, still in process, is complete decentralization of the banking system.

The first step, removing all dangerous individuals from banking positions, was successful, despite the early predictions that banking facilities would be hampered. The continued operation officers sought replacements, and the sound judgment they used in

Senate Group Favors Mininmum Wage Raise

Proponents of a new minimum wage law are reported to be optimistic of its passage by the Senate after its approval on Feb. 14 by what was said to be an overwhelming majority of the Senate Committee on Education and Labor. It is estimated that 6,000,000 workers will receive higher wages under the measure, it passed, as amended. The following are the provisions of the bill, as given by the "Journal of Commerce"

1. An immediate increase in the minimum wage from 40c to 65c an hour for two years. The minimum would then go to 70 cents an hour for a period of two years and would then rise to 75 cents ar hour.

2. About 2,000,000 workers no covered by the present minimum wage law would be covered by the new act.

3. New coverage would be extended to include first processors of agricultural, horticultural or sea products. However, an exemption of 14 weeks a year up to 56 hours of work a week is provided in these classifications to permit longer working hours and the hiring of part-time transient workers in harvest seasons.

4. Extension of coverage of all workers in industries affecting interstate commerce. Previously the law covered only workers directly engaged in or producing for interstate commerce. The Wage-Hour Administration and the Supreme Court, however, have held that in-"affecting" interstate commerce come within the meaning of the law and the new provision is regarded as a clarifica-

5. All retail establishments having four or more retail outlets which together do an annual volume of business of more than \$500,000 are covered. Previously all retail establishments were ex-

6. All daily papers with a circulation of less than 3,000 are exempt. The law previously included all daily papers.

Increasing the minimum wage is on the administration's list of 'must" legislation. A bill identical to the Senate measure is pending in the House Labor Committee, but is not expected to be reported before the Senate has acted.

Atomic Bomb Test Plans Discussed

At a recent White House meeting, plans were discussed for the atom bomb-warship tests to be conducted by the Army and Navy in the near future, it was reported from Washington on Feb. 13, by the Associated Press, which also

"1. It was learned that the ground rules for the test are being fixed by the joint chiefs of staff, with unanimous vote decisions required. This was decided upon as the best method for settling differences among the three arme services and for eliminating in advance some of the expected arguments over the results.

"2. General of the Army H. H. Arnold, war-time chief of the Army Air Forces, told a House committee that the United States 'must capitalize upon the atomic bomb,' backed with a powerful air force, 'to preserve the peace of the world.'

attended by Robert P. Patterson, and a half of the small homes in of State, and three of the four veterans guaranteed so far. The Admiral Chester W. Nimitz." League President.

Our World to Build

Vice-President, Commercial Credit Corporation

Mr. Millians Points Out That the Gravest Danger to Our Traditional Economic System Is Economic Ignorance. Contends National Solvency Rests Upon a Stable Dollar and Balanced Budget, and Holds That Accumulated Savings, the Outcome of Creating Currency for Things Destroyed or of No Use Is a Constant Threat of Inflation. Attacks Continued Expansion and Use of Government Credit and Guarantees and Calls for a Free Economy Under the "Price System" With Individualism as Hope of Country.

For my part of tonight's program I have accepted the thesis of the current year's overall topic of this fine organization—"Our World to Build"—a timely and challeng-

ing topic

And as I think of the challenge which this building job holds or all of us, I am reminded of a artoon that appeared a few days ago in the Boston "Traveler." It was one of Galbraith's cartoons, 'Side Glances." Mrs. Professor Smith was being introduced—perhaps at a Business and Professional Women's meeting—and the presiding officer said, "Mrs. Professor Smith will speak now about post-war problems — she's very hopeful and promises not to mention any of the dreadful things going on.'

Now I am very hopeful-but though some dreadful things are going on the best hope for the future lies in telling ourselves the truth about our economic system and in trying to understand how it works. It is time to get down to economic realism.

"Our World to Build"? James McCarthy, Dean of the School of Commerce of the University of Notre Dame said in a magnificent talk here in New York several weeks ago, "In the Mansion of Literacy there are many rooms. And there is eloquent testimony that our literacy has been far-reaching and in the main triumphant; in literature and in science we have achieved a mature literacy. But there is one noom cluttered with false concepts and brooding negatives a room of cant and nonsense, and the legend over the door of this room is 'economics'

Economic Ignorance

Economic ignorance today endangers our traditional voluntary economic system. There are evangelists of de-Americanization at work in our country and the ideas they propagate, many of which are loaded like revolvers and aimed straight at the heart of traditional America, find root and grow in the soil of economic ignorance.

In making an observation of this scope the question naturally arises, what shall we do about it? And the answer I give-and with humility because of the importance of the question itself-is that we need, all of us who want to live and work in a free economy, to explain what a free economy is-to combat economic ignorance with the economic facts in the present situation.

There are candles of understanding to be lighted in the cluttered room of economics that Dean McCarthy mentioned.

What are they? . . . these candles of understanding that need to be lighted. You will think of a dozen of them-I have selected just one to examine with you here tonight.

Though my candle power may be dim, I want to discuss, within the time of this meeting that I

* An address by Mr. Millians, before the 25th Anniversary of the New York League of Business and Professional Women, Inc., Jan. 26, 1946. (Continued on page 1138)

Conference on Housing **Credit to Be Held** In New York

A Conference on Housing Credit in 1946 has been called by Henry P. Irr. Baltimore, President of the United States Savings and Loan League, to include managers of the savings and loan associations and co-operative banks in all parts of the country, it was announced at Chicago on Feb. 16. Scheduled for New York City April 11 and 12, the meeting will come at a time when Housing Expediter Wyatt expects his program for stepping up housing production to have gotten under way, and when the rules and regulations for operation under the revised G. I. Bill of Rights will be

Mr. Irr emphasized that financhome owning program to relieve the nation's housing shortage will fall to a large degree on the savings and loan institutions, which "The White House meeting was supply credit for between a third Belgium or elsewhere.

"Belga" Discarded as Legal Monetary Unit

Announcement has been made by Belgium of the official demise of the "belga" after almost 20 years of nominal existence as the legal denomination of Belgian monetary unit, which now reverts to the "franc," it was indicated in advices from the Paris Bureau of the "Wall Street Journal" of Feb. 14, which also had the following

The belga was a device adopted to inspire confidence in Belgian money when the country undertook in October, 1926, its first monetary devaluation following World War I. Representing five ordinary fracs, it was intended to disguise the extent of monetary depreciation. It emphasized also its indepedence of the French franc, with which it had been interchangeable before 1914, but whose prospects then as now looked less favorable than those of Belgian currency.

Government officials hoped in time the word "belga" would oust ing of the home building and the "franc" in common parlance at home. National banknotes were inscribed in belgas as well as francs. All official exchange rates were quoted in belgas. However, the new word never took root in

It is now dropped from ex-Secretary of War; Secretary For- ordinary times, and which have change lists, and notes bearing its restal; James F. Byrnes, Secretary made 85% of the home loans to name are being withdrawn progressively under terms of yestermembers of the joint chiefs of branching out of these institutions day's decree. Eisenhower and Fleet agenda, as announced by the emerged from the second World War.

. The State of Trade

The steady decline from week to week in industrial production came to a halt last week and leveled off to be even with that of the preceding week. Many manufacturers continued to be confronted with the problem of raw materials and labor shortages, yet with a few exceptions, output was at a high point. Despite this showing in output unemployment compensation claims continued on the up-

grade, rising slightly the past week. It is reported that by the agement to new wage advances, end of February the Lockheed adding that all wages are now to Aircraft Corporation will trim its personnel overhead costs by 10%, resulting in approximately 2,200 workers being released from that company's payroll. Further re-ductions will follow until midsummer, it is understood, when the company's payroll may be expected to level off at 25,000 production workers. In the New York area it was reported that effective on Thursday last 6,000 per diem workers were to be dis-charged from the New York Naval Shipyard in Brooklyn, followed by approximately 1,500 others by

Since President Truman announced his new wage-price policy much sentiment is crystallizing in opposition to it. Expressing his views on this question, James H. McGraw, Jr., in an editorial for March entitled "The President's Wage-Price Policy Won't Work," and appearing in all McGraw-Hill publications said in part:

'Unless Congress acts to see that the Administration request for a broad extension of its wartime powers for an additional year beyond June, 1946, is not granted, except upon terms that guarantee the use of such power with a consistency that has been conspicuously absent up to now, we are headed for an explosion.

"The explosion," the editorial states, "will come in one of two forms—either in a continuance of industrial strife, or in a rocketing inflationary boom that can only end in collapse and depression."

Six things, the article urges. must be done:

1. Congress must provide sufficient price relief to yield profits normal to high-level operation. 2. The basis for price relief

must be clearly defined and geared to actual costs of operation at the earliest possible date. 3. OPA administrative proce-

dures must be speeded up and streamlined, or the delays that characterized past administration will become intolerable:

Congress must see that, once established, the new line is held as long as wartime controls are continued by enforcing restrictions on wages as well as prices.

5. Congress must set an early date for the termination of all wartime controls and provide for progressive and bold steps for decontrol to be taken before that date, as soon as production levels in any field are sufficiently high to restrain runaway prices.

6. It must proceed without delay to marshal fiscal and monetary policies to combat inflation. in order that price controls may be discarded at the earliest possible date.

"The long-awaited wage and price policy," the editorial de-"offers little promise of such solution, and this may well constitute a national calamity.

"The Administration has justified its policy of promoting wage increases as a measure necessary to forestall deflation-to keep purchasing power from falling and forcing the economy into a violent tailspin. The strict holding-of-theline on price ceilings has been defended as necessary to prevent runaway inflation.'

The editorial points out however, that the President's program for dealing with inflation promotes the very danger which Mr. Truman is urging everyone else to combat and notes that it would have been sensible for the new wage policy to reverse the former practice of lending active encour-

be raised to the level established by recent settlements.

Continuing, the editorial states, "The only brake applied on the wage side lies in a directive to the Board not to approve, as a basis for price relief, wage advances that go beyond the established

"The price adjustments granted by OPA on average," the editorial observes, "will yield profits after taxes no larger in dollar terms than in the 1396-39 period, although 1946 manufacturing sales are expected to be more than twice as high. The ratio to net twice as high. worth of profits after taxes will be one-fourth lower than the 1936-39 average. This clearly undermines the incentives upon which production at high level depends.

"Under these circumstances, there is a growing demand on the part of business groups that price controls be rescinded immediately. It is argued that, once the restrictive influence of price controls is relaxed, capacity production soon will supply sufficient goods to prevent undue price inflation.

"Our situation is definitely more threatening than it was in 1919, efter the first World War, If we discard all controls now, as we did en, prices might easily go up om 25 to 50% in a year's time.

"But if the Nation cannot afford to risk disastrous inflation by immediately abolishing controls, neither can business afford to accept the program the Administration now proposes.

"The wage-price policy will not hold the inflation line so long as the Administration is leading the assault to breach that line on the wage side, as it has done ever since V-J Day.

Steel Industry-Difficulties involved in returning struck steel plants to operation, coupled with uncertainty as to price advances for specific steel products, kept both operating and sales departments of the steel industry in confusion last week, according to the "Iron Age," national metal-working paper. Little finished steel was produced in the early part of the week as mills awaited coke oven gas necessary for operation of soaking pits and accessory heating equipment.

No steel deliveries of consequence were expected to be made until the announcement of new prices, states the magazine. Steel companies the past week notified their customers that the price advance was effective Feb. 15. Until the various adjustments are made on many steel products to arrive at an average increase price \$5 a ton, steel shipped will be billed at the old price. When the new quotations have been announced, an additional billing will be made to the customer for material shipped after Feb. 15 for any difference between the old and new price.

The steel industry and the OPA have until March 1 to allocate \$4.50 of the \$5 a ton price increase among various steel products and until March 8 to allocate the balance. While it may not take that long before prices are announced considerable difficulty may be encountered in arriving at steel price advances designed to alleviate the hardships of the small non-integrated steel mills, the "Iron Age"

(Continued on page 1142)

AIB Convention Plans Are Announced

American Institute Banking, educational section of the American Bankers Association, is planning its first post-war convention to be held at Cincinnati, Ohio, June 10-13 inclusive, it was aannounced on Feb. 11 by David T. Scott, national President of the Institute, who is also Assistant Cashier of the First National Bank, Boston, Mass. June convention will be the 43rd annual meeting of the Institute. At the convention, representatives of the various A. I. B. chapters and study groups in every important banking center of the United States and its territories will discuss the Institute's postwar educational program. Emphasis in this program is being placed on plans to aid veterans, post-war education for bankers, and reestablishment of departmental and Institute conferences. William C. Way, Trust Officer of the Central National Bank, Cleveland, Ohio, who is immediate past President of the Institute, has been appointed Chairman of the Department Conference Committee which is now active in securing the services of capable conference

When it was originally planned to hold the convention in 1946, the dates were scheduled from June 11 to 14. Present plans call for the convention to open Monday, June 10, and close the afternoon of Thursday, June 13. The last regular convention of the Institute was held in New Orleans, La., in 1942. In June, 1943, the A. I. B. held a war-time conference in Chicago, Ill., with a restricted attendance, and a simi-lar meeting in St. Louis, Mo., in June, 1944. In 1945 the convention was omitted because of travel restrictions, and a meeting of the Executive Council was held instead under an emergency provision of the Institute's constitution. All restrictions for attendance will be removed for the first post-war convention, which will be held in June of this year.

William A. Reckman, President of the Western Bank & Trust Co., of Cincinnati, Ohio, is General Chairman of the local convention committee, representing Cincinnati Chapter. He is assisted by a General Vice-Chairman, Louis R. Sabo, of the Cincinnati branch of the Federal Reserve Bank of Cleveland, who is President of Cincinnati Chapter, and Arthur D. Snyder, of the First National Bank of Cincinnati, Vice President of Cincinnati Chapter. The Gibson Hotel has been selected as convention headquarters.

Congress Moves to End Bans on Public Works

A resolution by the Senate lifting restrictions halting expenditures on projects not needed for war purposes was passed by the House on Feb. 8, and sent to President Truman. It would permit appropriations for a \$500,000,000 rivers and hark was authorized in March 1945, according to Associated Press Washington advices, which said:

The resolution make the public works eligible for appropriations without waiting for the President, or Congress, to declare offices or Congress, to declare offices of the war. Approval of the measure by the President want inflation or don't want it. Everybody on that proposition votes no. Bowles was being pictured by the influences behind appropriation for waterways already has been passed by the House, and is awaiting Senate

Projects authorized but not appropriated for in the 1945 act are of some temporary rising prices, in all parts of the country. Among was to stimulate production. This in all parts of the country. Among points out. Paradoxically the the projects and the estimated products on which many of the larger steel companies are losing money are the semi-finished steels. \$1,010,000, and Jones Inlet, N. Y., \$1,800,000.

From Washington Ahead of the News By CARLISLE BARGERON

There are many Washington observers who think that last Valentine's Day was the turning point in Mr. Truman's Presidential career, or more important, in the country's career. To understand the situation, it must be understood that Mr. Truman is not a "big" man, whatever that means; he has never claimed to be one. It was his earlier inclination to take the controls off of the American people

and let free enterprise get to work.

But being just a former Senator of one State and thinking in the terms of a Senator, the Leftist reporters pressed him in his earlier press conterences as to whether he supported this particular bill or that par-ticular bill. The ordinary Senator,

Carlisle Bargeron

which Mr. Truman had been, usually favors all appropriations wanted the FEPC bill, he wanted a Federal setup of health insurance, he wanted anything else which a particular vociferous tion. pressure group happened to be demanding at the time. Mr. Truman thought he could satisfy everybody, because there was a tremendous pent-up demand for point to with pride to this or that privately and see. bloe in the coming campaigns. Whereupon, Mr. Truman sent up ing hodge-podge programs, having no relation to our ability to pay, that Congress has ever been confronted with. When he did this, Mr. Truman thought there was no to have a good time and enjoy the prerogatives of the Presidential perity. Incidentally, his office, which means that anytime damned if it wasn't annoying. With a view to getting off to Florida or some other junket; he proposed several off-the-hip remedies, and they all turned sour.

and it is a commentary on Mr. Truman can understand that. Truman's steadfastness when put up against it, the Leftists were trying to make a hero out of Chester Bowles and were seeking to destroy John W. Snyder on the question of whether the "price line," whatever that is, should be him as the champion of the great majority who voted "no." Snyder, not a forceful talker, was trying to get over his point that the way to prevent inflation, irrespective

mere of a licking in the propa-

ganda of Washington than Snyder

Over a period of weeks, Snyder, in the propaganda picture, was labelled as a friend of industry, of steel, though just why that should be a libel of a man, is difficult to understand, except that the Leftists have made it that way. The Bowles aides joined in the propaganda, which was one of the most intensive our propaganda-ridden city has seen in a long time. It was to the effect that either Bowles had his way or he would resign and this meant, according to the accompanying propaganda, that the country would then go to hell. Then came the stories from Chester's aides, peddled by them and nobody else, but which Washington newspapermen accepted. some of them innocently and now and is against all taxes. This was apologizing about it, and others Mr. Truman's attitude. He wanted purposefully, that there would be an extension of social security, he a bulge in the price line, whatever that means, but that Bowles would supersede the "inept" Snyder as the big shot in stabiliza-

That was when Harry Truman showed his stubbornness. He reshuffled some agencies, he agreed with Snyder that the so-called price line had to be flexible, and goods in the country, and it looked he went out of his way at not one like the country was headed for but two press conferences to point prosperity. He was told by his out that Bowles and his office, advisers, namely Bob Hannegan, whatever the new alphabetical who thinks in terms of organized agencies turned out to be, would voting blocs, that this was the still be in Snyder's office. The thing to do in order to hold this Bowles people, in the absence of bloc vote or that bloc vote. We've his getting indignant and resigngot to have a program, Hannegan ing, are still insisting that he has kept telling him, things we can displaced Snyder. Ask Truman

The episode means two things: One that Harry Truman intends to Congress one of the most amaz- to be firmer in the future; secondly, that aside from his own predelictions, he has come to realize that the way to cure all of the country's ills and d'ss'oate the blocs and isms, the Leftists and reason why he should not proceed radical labor leaders. is to give the country old-fashioned presservative friends are telling him you want to go anywhere, or if that that is the best way to be rethere is anything you want to do, elected, not through trying to keep heaven and earth will be turned the country in a crisis state and to arrange it. Mr. Truman was manipulating this bloc. racial or thinking in these simple terms economic, against the other. This when the CIO moved in and began means that Bob Harnegan with conducting mass industry and his expert, ward-heeling political pressure strikes. Reluctantly he advice, seems to be in the doghad to deal with the situation and house, which it is our very definite understanding that he is. Snyder, the milk-toast, as the Leftists describe him. has moved in closer to the driver's seat. And the reason, apparently, is that he In the course of these things, has a clear and simple mind and

US & Turkey Sign Air Pact

The United States and Turkey signed a "fifth freedom" air transport agreement in Ankora Feb. 2, the State Department announced on Feb. 15, according to United Press advices from Washington in the New York "Herald Tribune" which added:

It provides that an American air line, Pan American Airways, may operate from the United States through Turkey to India. The company is permitted to stop and pick up international traffic at Istanbul and Ankara.

Turkish air lines will receive reciprocal rights on a route through the United States which will be determined at a later date.

The Financial Situation

(Continued from first page)

less certain that he can do inflation. what no other man has ever succeeded in doing during the centuries of recorded history -seal off natural forces and take over their functions.

But, so far as can be learned. Mr. Bowles has no intention of taking time for sober thought, or if he had the time would not engage in such a pastime, and since he by profession is an adept at influencing men's minds, it is ably on strong ground when necessary to combat his influence in and out of Congress if the people of the kets as reflecting precisely United States are not to be such notions. What Mr. United States are not to be called upon to pay through the nose for the futile attempts of Mr. Bowles and others of the same mind to make men behave as they have never before behaved. This, of course, entails rebutting arguments and controverting assertions, the weakness and the folly of which really should be plain to the wayfaring man even though a fool. It requires that members of Congress, and the great rank and file of the people, be placed in possession of facts which they may not have at hand and reminded of developments which they may have overlooked.

Wrong Then; Ergo Right Now

Mr. Bowles in his long statement to the House Committee on Banking and Currency had much to say about what he terms the earlier misjudgment of the situation by Washington authorities. It seems to be a trick of the politicians suddenly to find where they went wrong in the past and to parade their mistakes before the public as a reason for keeping them in power. In the hands of a skillful strategist or tactician, it often even the "subsidies," prolon-"works" — to the dismay of the more straightforward manded, can long conceal the claimants for public confi-

Mr. Bowles makes much of the symptoms of a speculative fever which he finds on all sides at the present moment. One gets the impression that the Administrator finds the chief dangers of "inflation" in the psychological state of the rank and file — and, of course, inevitably in the unpleasant "designs" of the "speculators," "gamble rs" and the rest. All this makes a good "thriller" for the children's bedtime hour -"thrillers" are ever good for such a purpose - but not much else can be said for it. He would have us believe that the trouble is found in widespread belief that the "line" accordingly the remedy is to be sought in doing those things which will convince

return to Washington much Mr. Bowles, there will be no

Irresistible The fact of the matter is, of course, that informed persons are quite convinced that neither Mr. Bowles nor any one else in or out of Washington can very long resist the forces which are today nudging us toward what Mr. Bowles and the others term inflation. In that Mr. Bowles is quite right. He is also probhe points to various speculative or semi-speculative mar-Bowles and the others fail utterly to understand is that this belief that neither the "line" nor the "bulge" can be permanently held has little or nothing to do with what Washington is doing to prevent inflation or plans to do for the purpose. What these markets and other indications are (or were) saying is simply that no force which any government can bring to bear can put natural laws in shackles and keep them there; that no lasting success can possibly attend the efforts of the would-be controllers in Washington to neutralize the inflationary factors in a situation characterized by incredible additions to money supply, a continuation of policies which add still further to that supply, and the various other associated factors now existing. Least of all, is it conceivable that large increases in wages and other and women crave can proceed with but little let or hindrance without corresponding increase in the prices which consumers must pay. Not gation of which is now denecessity follow upon repeated additions to the cost of filling the markets with goods people want.

How Dangerous Is Mr. Bowles?

What thoughtful people have begun to suspect is that they had underestimated the ability of Mr. Bowles and his associates to frustrate and delay the appearance of a flourishing peacetime economy in this country. They probably also had not given quite the attention they should have to the ability of the unions to cause trouble. But the real root of the difficulty was in price regulations which made it all but impossible for emwill not be "held," and that ployers to reach any sort of understanding with their men which would leave any reasonable possibility of profitthe public that the Govern- able operations. Certain obment in Washington means servers are now beginning to business when it says, as does wonder if they had not like-ber shoe.

Miners Ask Same Pay For 35 Hrs. as for 48

A demand for a 35-hour, 5 day week, at the same pay now received for 48 hours and six days, featured the concluding session on Feb. 16 of the wage-scale convention of District 5, United Mine Workers of America, at Pittsburgh, according to special advices from that city to the New York 'Times," which also had the following to say:

The delegates stressed repeatedly that they would support John L. Lewis, "no matter what his demand will be.

Also approved were resolutions for more vacation pay and for a renewal of the demand for a royalty of 10 cents for every ton of coal mined. The royalty would be paid by the coal operators into the UMWA benefit fund.

Fear of rapid mechanization of mines drew resolutions that each mine unit consist of a specified number of workers. Delegates charged that, otherwise, many workers now employed would lose their jobs.

The convention also urged that the problem of seniority be "iron-ed out." Veterans, they held, should receive credit for time in the armed services, but they should not replace workers with greater seniority

About fifty resolutions on mine safety precautions were offered.

Only one proposal, that of extending the tenure of officers from four years to six years during the next term, threatened to disrupt the five-day meeting. The suggestion was dropped in the face of strong opposition.

Sees Administration Run by CIO-PAC

In a speech in which he asserted that President Truman's administration was dominated by the policies of the CIO Political Action Committee, "derived directly from Marx via Moscow, Senator Robert A. Taft of Ohio on Feb. 12 declared that the return costs of making the goods or of the Republican party to power performing the services men is the only way to achieve "American principles of freedom and sound government." Associated Press advices from Kansas City, Mo., reporting this added:

In a speech prepared for delivery before a Lincoln Day banquet here, only a few miles from the President's home at Independence, Mr. Taft said, "Today begins the campaign to elect a Republican Congress in 1946 and a G.O.P. President in 1948."

In an interview earlier today, the Senator told reporters: "It is unlikely that we will get a majority in the Senate. I see electing 13 as remotely possible and we might lose four." If a Republican was elected President in 1948, he predicted, "he would have a Republican Senate."

The basis of any Republican program, Senator Taft declared in his address, must be designed to maintain the "liberty of States and localities to rule themselves without orders from Washington.

"Today that liberty is threat-ened by the steady spread of totalitarian ideas," he added.

wise underrated the ability of Mr. Bowles to obtain support in Congress. Perhaps many were a little too certain of the end at June 30 of this year of the laws which made these foolish regulations possible.

But in the long run, there can be no doubt that natural forces will move on over Mr. Bowles and all the rest like a steam-roller over an old rub- Island section, \$991,000.

Senate Subcommittee Hearings on Proposed St. Lawrence Seaway

Proponents of the St. Lawrence seaway and power project re-cently appeared before a Senate Foreign Relations subcommittee to give expression to all conceivable arguments in its favor before those opposed to its establishment were given an opportunity to advance its weaknesses. Edward Macauley, Acting Chairman of the Maritime Commission, on Feb. 19 told the Senators that the seaway is a requisite to the "realization of the full® maritime potentials of the nation", ! the Associated Press reported in its Washington dispatch, adding

that on the same day Charles F Brannan, Assistant Secretary of Agriculture, citing multiple benefits to the farmer, asserted the development would also "increase our nation's economic stability and security."

Another witness who went before the committee on Feb. 19 to give full approval to the project, according to the Associated Press, was Claude R. Wickard, Rural Electrification Administrator who, dealing particularly with the power phase of the long-sought international development, asserted:

"Low cost power resulting from the completion of the project should enable nearly all of the farms in the New England and Middle Atlantic States to receive the benefits of electric service at rates which will permit complete utilization of electric energy.'

Mr. Wickard estimated, the Associated Press continued, that cost of St. Lawrence power delivered within a radius of 300 miles will not exceed 3.1 mills per KWH. Present wholesale charges, he said, range from 10.7 mills to 13.3 mills. The Press accounts added in part:

Mr. Wickard said there is "no section" in which complete rural electrification would mean more to the agricultural economy "than to the diversified farming interests of the Northeast.'

For each kilowatt hour now purchased by the seven REA cooperatives in New York State, Wickard said "over four times" as much energy could be purchased "without additional cost" if power were available from the St. Law-

"Such a favorable rate," he said, would enable rural users in New York and neighboring States to enjoy the maximum benefits from electric service and also make it economically possible to extend service to thousands of unelectrified farms.'

A statement from Gov. Walter S. Goodland of Wisconsin, which was read to the committee by Irwin L. Lenroot, former Republican Senator from that State, declared that opposition to the seaway was "shortsighted, selfish and based on outworn theories of re-strictive economics". Governor Goodland also said that benefits would accrue to agriculture through construction of the project.

On Feb. 20, the estimate of Army engineers as to the total cost to the United States of the seaway and power project was placed before the Senate sub-committee by Lieut. Gen. R. A. Wheeler, chief of the Army Engineers Corps. The figure as revised to \$342,016,000 was roughly \$57,000,000 more than the engineers' 1941 estimate, the Associated Press pointed out and added:

General Wheeler said that the total cost to Canada will be \$277,-484,000, of which \$132,672,000 has Of the been expended to date. United States total \$31,742,000 has already been spent. The combined total cost of the entire project to both countries is \$619,500,000.

Gen. Wheeler gave this breakdown of the total United States

Great Lakes Section-New lock at Sault Ste. Marie with approach channels, \$14,637,000; connecting channels, \$66,029,000.

St. Lawrence River-Thousand

International Rapids Section -

Works solely for navigation, \$42,-964,000; works primarily for power, \$98,684,000; works common to navigation and power, \$118,711,000.

Brig.-Gen. T. M. Robins, retired,

former deputy chief of Army Engineers who assisted in the compiling of the original cost estimates on the seaway, told the committee:

"If the cost of the seaway increased as much as 50% it would still be economically justified."

Henry A. Wallace, Secretary of Commerce, on Feb. 21 added his voice to those approving the seaway. From the press accounts we quote:

To evaluate the St. Lawrence project adequately, Secretary Wallace said, it is necessary to consider it in the light of possible national developments in production and trade.

Estimating, on the basis of 1941 studies, that new traffic generated by development of the seaway will total 10,000,000 tons for this nation, Mr. Wallace declared:

"Even if all of this traffic represented a direct diversion from the railroads, the total ton miles lost to the roads would not exceed, at the maximum, one or two per cent of the total ton miles they would be called upon to han-

All Commerce Department surveys, he said, have indicated substantial savings in transportation charges would result from operation of the waterway.

As to the power phase of the project, Secretary Wallace said:

"Development of cheap power has always brought a correlative development of the area which enjoys its benefits. Power is the heart of American industry. It is clearly more important now than ever before."

On the final day of the first week's hearings, the committee heard a letter from former President Hoover in which Mr. Hoover reiterated his long-time support of the St. Lawrence project. Asserting that it would not harm America's existing transportation sys-tem or ports, the former President at whose instance the late President Coolidge created the St Lawrence Waterway Commission in 1924, asserted however, that he still did not believe the Federal Government should undertake to produce and distribute the electric power which would be a byproduct of the seaway.

Opposing views by Senator Mead and others were voiced during the week to Feb. 25. For full text of Mr. Mead's statement see first

Senate Passes Supply Bill

A Federal agencies supply bill of more than \$5,000,000,000 was passed by the Senate on Fed. 18 and returned to the House for consideration of Senate changes. An appropriation for adding a west wing to the White House, as requested by the President was omitted from the bill, but allowance was made, according to the Associated Press in its Washington advices, for \$870,000 in White House improvements, and a \$5,-000,000 emergency fund was voted; these two items had been rejected by the House. The Associated Press also reported:

"The largest item in the bill is more than \$4,000,000,000 for the Veterans Administration to provide hospitalization, disability compensation and other payments for world war veterans. The measure also includes funds for highways."

Substitute "Full Employment Bill" Signed By President—Text of Act

The long-debated employment bill which is a compromise for the administration-sought "full employment" legislation was signed by President Truman on Feb. 20. In a formal statement in which he said that the measure was not all that he had hoped for, the President summarized the major provisions of the bill as follows:

1. The act declares that it is "the continuing policy and responsibility of the Federal Gov- Act of 1946." ernment . . . to coordinate and utilize all its plans, functions and President had the following to resources for the purpose of creating and maintaining ... conditions under which there will be afforded useful employment opportunities, including self-em-ployment, for those able, willing and seeking to work . . Congress by this declaration has accepted a great responsibility.

2. The Congress has placed on the President the duty of formulating programs designed to accomplish the purpose of the act. In signing this act, I accept this responsibility, which I believe is in line with the responsibility placed on the President by the Constitution. This task is so great that I can perform it only with the full and unqualified co-operation of all who are sincerely interested in the general welfare inside and outside the Government. Making this act work must become one of the prime objectives of all of us: citizens generally, industry, labor and agriculture. State and local governments. and the Federal Government.

3. The Act includes a significant provision that will facilitate co-operation between the executive and the Congress in the formulation of policies and programs to accomplish the objectives of the It establishes a joint congressional committee consisting of seven members of the Senate and seven members of the House. This committee is given an assignment of great scope and the highest

importance. The Act establishes in the executive office of the President a Council of Economic Advisers, composed of three members to be be appointed by the President with the consent of the Senate. The new Council will be an important addition to the facilities available for preparing economic policies and programs. In carrying on this work, I expect the fullest cooperation between the Council, the Cabinet, and the several divisions of the executive

At the outset of his statement the President said:

"I have signed today The Employment Act of 1946. In enacting this legislation the Congress and the President are responding to an overwhelming demand of the people. The legislation gives expression to a deep-seated desire for a conscious and positive atupon the ever-recurring problems of mass unemployment and ruinous depression.

"Within three years after the first World War we experienced farm foreclosures, business failures and mass unemployment. In fact, the history of the last several decades has been one of specbooms alternating with deep depression. The people have found themselves defenseless in the face of economic forces beyond their control.

"Democratic government has the responsibility to use all its resources to create and maintain conditions under which free competitive enterprise can operate effectively-conditions under which there is an abundance of employment opportunity for those who are able, willing and seeking to

"It is not the Government's duty to supplant the efforts of private enterprise to find markets, or of individuals to find jobs. The people do expect the Government, however, to create and maintain conditions in which the individual business man and the individual the policy declared in section 2; job seeker have a chance to suc- (2) current and foreseeable trend

In concluding his statement the say, according to special advices to the New York "Herald Tribune" from its Washington bureau:

"I am happy that the Senate adopted this legislation unanimously, the House of Representatives by a large majority. The result is not all I had hoped for, but I congratulate members of both houses and their leaders upon their constructive and fruitful efforts.

"The Employment Act of 1946 is not the end of the road, but rather the beginning. It is a commitment by the Government to the people -a commitment to take any and all of the measures necessary for a healthy economy, one that provides opportunities for those able, willing and seeking to work. We shall all try to honor that commitment."

The enactment by Congress of the compromise Full Employment Bill was noted in our issue of Feb. 20, page 1009.

Referring to the three-man Economic Council which the measure would set up, the Associated Press accounts Feb. 20 stated that an informed source said Mr. Truman is considering for two of these places Gov. Ellis G. Arnall of Georgia and John G. Winant, former Social Security Board Chairman and now Ambassador to Britain.

It was added that the members, to be appointed with Senate approval, will be paid \$15,000 a year the same as Cabinet members.

The following is the full text of the "Employment Act of 1946" as signed by President Truman on

AN ACT

To declare a national policy on employment, production, and purchasing power, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

Short Title

Section 1. This Act may be ited as the "Employment Act of

Declaration of Policy

Sec. 2. The Congress hereby declares that it is the continuing policy and responsibility of the Federal Government to use all practicable means consistent with its needs and obligations and other essential considerations of national policy, with the assistance and cooperation of industry, agriculture, labor, and State and local governments, to coordinate and utilize all its plans, functions, and resources for the purpose of creating and maintaining, in a manner calculated to foster and promote free competitive enterprise and the general welfare, conditions under which there will be afforded useful employment opportunities, including self-employment, for those able, willing, and seeking to work, and to promote maximum employment, production, and purchasing power.

Economic Report of the President

Sec. 3. (a) The President shall transmit to the Congress within sixty days after the beginning of each regular session (commencing with the year 1947) an economic report (hereinafter called the "Economic Report") setting forth (1) the levels of employment, production, and purchasing power obtaining in the United States and such levels needed to carry out ceed by their own efforts. That is in the levels of employment, pro-

duction, and purchasing power; (3) a review of the economic program- of the Federal Government and a review of economic conditions affecting employment in the United States or any considerable portion thereof during the preceding year and of their effect upon employment, production, and purchasing power; and (4) a program for carrying out the policy declared in section 2, together with such recommendations for legislation as he may deem necessarv or desirable.

(b) The President may transmit from time to time to the Congress reports supplementary to the Economic Report, each of which shall include such supplementary or revised recommendations as he may deem necessary or desirable to achieve the policy declared in section 2.

(c) The Economic Report, and all supplementary reports transmitted under subsection (b), shall, when transmitted to Congress, be referred to the joint committee created by section 5.

Council of Economic Advisers to the President

Sec. 4 (a) There is hereby created in the Executive Office of the President a Council of Economic Advisers (hereinafter called the "Council"). The Council shall be composed of three members who shall be appointed by the President, by and with the advice and consent of the Senate, and each of whom shall be a person who, as a result of his training, experience, and attainments, is exceptionally qualified to analyze and interpret economic developments, to appraise programs and activities of the Government in the light of the policy declared in section 2, and to formulate and recommend national economic policy to promote employment, production, and purchasing power under free competitive enterprise. Each member of the Council shall receive compensation at the rate of \$15,000 per annum. The President shall designate one of the members of the Council as chairman and one as vice chairman, who shall act as chairman in the absence of the chairman.

(b) The Council is authorized to employ, and fix the compensaunder this Act, without regard to the civil-service laws and the Classification Act of 1923, as amended, and is authorized, subject to the civil-service laws, to employ such other officers and employees as may be necessary for carrying out its functions under this Act, and fix their compensation in accordance with the Classification Act of 1923, as amended.

(c) It shall be the duty and function of the Council-

(1) to assist and advise the President in the preparation of the Economic Report:

(2) to gather timely and authoritative information concerning economic developments and economic trends, both current and prospective, to analyze and interpret such information in the light of the policy declared in section 2 for the purpose of determining whether such developments and trends are interfering, or are likely to interfere, with the achievement of such policy, and to compile and submit to the President studies relating to such developments and trends.

(3) to appraise the various programs and activities of the Federal Government in the light of the policy declared in section 2 for the purpose of determining the extent to which such programs and activities are contributing, and the extent to which they are not contributing to the achievement of such policy, and to make recommendations to the President with respect thereto:

(4) to develop and recommend

nomic policies to foster and promote free competitive enterprise, to avoid economic fluctuations or to diminish the effects thereof, and to maintain employment, production, and pur-

chasing power;
(5) to make and furnish such studies, reports thereon, and recommendations with respect to matters of Federal economic policy and legislation as the President may request.

(d) The Council shall make an annual report to the President in December of each year.

(e) In exercising its powers, functions and duties under this

(1) the Council may constitute such advisory committees and may consult with such representatives of industry, agriculture, labor, consumers, State and local governments, and other groups, as it deems advisable:

(2) the Council shall, to the fullest extent possible, utilize the services, facilities, and information (including statistical information) of other Government agencies as well as of private research agencies, in order that duplication of effort and expense may be avoided.

(f) To enable the Council to xercise it powers, functions, and duties under this Act, there are authorized to be appropriated (except for the salaries of the members and the salaries of officers and employees of the Council) such sums as may be necessary For the salaries of the members and the salaries of officers and employees of the Council, there is authorized to be appropriated not exceeding \$345,000 in the aggregate for each fiscal year.

Joint Committee on the Economic Report

Sec. 5. (a) There is hereby established a Joint Committee on the Economic Report, to be com-posed of seven Members of the Senate, to be appointed by the President of the Senate, and seven Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives. The party representa-tion on the joint committee shall to employ, and fix the compensa-tion of, such specialists and other experts as may be necessary for the majority and minority parties the carrying out of its functions. In the Senate and House of Representatives.

(b) It shall be the function of the joint committee-

(1) to make a continuing study of matters relating to the Economic Report;

(2) to study means of coordinating programs in order to further the policy of this Act;

dealing with legislation relating Jan. 31, 1945. to the Economic Report, not and the House of Representatives containings its findings and recommendations with respect to each of the main recommendations made by the President in the Economic Report, and from time to time to make such other reports and recommendations to the Senate and House of Representatives as it deems advisable.

(c) Vacancies in the membership of the joint committee shall not affect the power of the remaining members to execute the functions of the joint committee. and shall be filled in the same manner as in the case of the original selection. The joint committee shall select a chairman and a vice chairman from among its members.

(d) The joint committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings as it deems advisable and, within the limitations of its appropriations, the joint committee is empowered to appoint and vice chairman. to the President national eco- fix the compensation of such ex-

"Soaking Rich"

Neither Secretary of State James F. Byrnes nor President Truman had shown that they were good administrators in the opinion of Charles P. Taft, former Director of the Wartime Economic Affairs of the State Department. In his remarks to this effect in New York at the Town Hall on Feb. 9 (as reported in the New York "Times") and which, said that paper, was his first talk there in 18 years. Mr. Taft said that the Chief Executive and his principal Cabinet member did not have enough background and training to qualify as good administrators. The "Times" continued:

As for the State Department generally, Mr. Taft asserted, "the people doing the clerical end of the work there don't have the faintest idea of the standards prevailing in well-run agencies.

Most of Mr. Taft's address was devoted to a discussion of the economics of employment, and he warned against placing faith in several prevalent theories—"soaking the rich," placing all emphasis on consumption and none on necessary investment, complete Government control of business, and vilification of the profit motive and those who believe in it.

Jan. Cotton Consumption The Census Bureau at Washington on Feb. 19 issued its report showing cotton consumed in the United States, cotton on hand,

and active cotton spindles in the

month of January.

In the month of January, 1946, cotton consumed amounted to 811,368 bales of lint and 96,242 bales of linters, as compared with 651.784 bales of lint and 86,303 bales of linters in December and 850,425 bales of lint and 129,296 bales of linters in January, 1945.

the six months In Jan. 31 cotton consumption was 4,407,219 bales of lint and 513,383 bales of linters, which compares with 4,870,811 bales of lint and 748,191 bales of linters in the cor-

responding period a year ago. There were 2,366,336 bales of lint and 328,268 bales of linters on hand in consuming establishments on Jan. 31, 1946, which compares with 2,380,324 bales of lint and 302,678 bales of linters on Dec. 31, 1945, and 2,292,765 bales of lint and 289,947 bales of linters on Jan. 31, 1945.

On hand in public storage and at compresses on Jan. 31, 1946, there were 9,964,513 bales of lint and 48,271 bales of linters, which compares with 10,504,564 bales of lint and 44,323 bales of linters on (3) as a guide to the several Dec. 31 and 12,980,186 bales of committees of the Congress lint and 28,679 bales of linters on

There were 21,629,882 cotton later than May 1 of each year spindles active during January, (beginning with the year 1947) to file a report with the Senate cotton spindles active during spindles active during January December, 1945, and with 22,260,-842 active cotton spindles during January, 1945.

> perts, consultants, technicians, and clerical and stenographic assistants, to procure such printing and binding, and to make such expenditures, as it deems necessary and advisable. The cost of stenographic services to report hearings of the joint committee, or any subcommittee thereof, shall not exceed 25 cents per hundred words. The joint committee is authorized to utilize the services, information, and facilities of the departments and establishments of the Government, and also of private research agencies

(e) There is hereby authorized to be appropriated for each fiscal year, the sum of \$50,000, or so much thereof as may be necessary, to carry out the provisions of this section; to be disbursed by the Secretary of the Senate on vouchers signed by the chairman or

Approved Feb. 20, 1946.

Our World to Build

(Continued from page 1134)

tion of government spending. I in the expenditure of federal have selected it because whatever funds for non-productive purposes we hope to achieve as a nation in excess of current tax income. rests upon a stable dollar and national solvency. And toward the end-a few remarks about a planned and controlled economy, because this thought is frequently interwoven by the classic economist with the question of government spending - "compensatory economy" some call it.

However, may I first protect my remarks by saying that I shall not be discussing war spendingthe amount of the war debt is the price we must again pay in the bazaar of war for political and economic freedoms. Rather, I shall be discussing deficit financing as an instrument of public policy. I shall not be discussing controls that were a necessary part of our war economy. Rather, I shall be discussing the philosophy of a planned and controlled economy

Government Spending

There is a delusion that war has made us prosperous when actually war deficits added to a decade of peacetime deficits have created a debt and credit expansion which predisposes to considerable trouble as an inflationary force. We find ourselves as a nation in the uncomfortable position of having billions of war savings that are a threat to the immediate future value of our dollar in terms of purchasing

And the reason for this is significant as a prelude to what I shall say later.

The billions of war savings are savings created by dollars used to pay people for producing goods now destroyed or of no use. They are not dollars which represent true wealth in forms of consumer goods, property resources, or useful tools of production.

No goods were produced to be bought with these savings. And here is my point: When and if we get into production, goods produced currently will create their own buying power; and therefore spending of war savings merely dilutes the buying power of money currently earned.

There is an arresting necessity for us to discourage the spending of wartime savings until accumulated savings and current earnings can be spread over maximum production. If we are to lessen the threat of wartime savings as an inflationary force, goods currently produced should be bought out of the current income which their own production creates.

But this explanation of why war savings constitute an inflationary threat is not an attempt to appear scholarly.

It is intended to show how an expansion of credit-dollars-to pay for goods destroyed and of has the same effect on dollar taxes.

Money is merely a catalyst for exchange of goods produced. Money spent for non-productive purposes competes with money spent for productive purposes and dilutes the value of each. Both move to a common level-there is no way to separate the productive dollar from the non-productive dollar.

Yet, most of the solutions being offered today to solve our social and economic problems are in the form of greater use of government credit-more money and credit and new forms of guarantees, all of which will merely aggravate be planned and controlled by govinflationary forces.

We have gone far enough already in the use of our government's credit. If we are to keep

may appropriately use, the ques- | ture we must pull up drastically

Balanced Budget Essential

Tax income should be the limiting factor in all government expenditures. The master key to the future of dollar stability is the familiar-sounding but misunertood balanced budget. Whatever social objectives we hope to achieve, whatever subsidies are justified, whatever financial aid we should give to impoverished and defaulting nations of the world—all these depend upon a balanced budget. For the logical and unavoidable end of a progressively increasing government debt is a rotting currency which destroys all savings, all gains of personal thrift. It destroys all meaning of purchasing power-a bigger pay envelope is a fake and a delusion unless there is a correspondingly bigger market basket on the kitchen table.

A balanced budget, as we move into the peacetime years, ahead, is the one and only key to a satisfactory economy of peace. It is the one way to economic and social progress. The opposite way growing governmennt deficits is the way in which preceding democracies have gone to their destruction.

Proven patterns of the past which history establishes supports this statement and they have been too impressive and too regular to be ignored.

Political and economic history shows that in free governments of the past there has always been a tendency to create new causes for expenditure, and instead of compensating such expenditures by collecting taxes, the tendency has been to shift the burden from the present to the future. Taxes not popular. Politically conditioned men in a democracy do not discipline harshly those empowered to vote them out of office.

It is this temptation to expand public credit in a democracy rather than to resort to taxes that and economic force, debasement caused Alexander Hamilton in his of coinage, deflation and inflation. Credit to call a progressively increasing public debt "the natural from functioning in accordance disease of all governments".

And in concluding our discussion of government spending I offer as a sugestion for present consideration the recommendation that Hamilton made in his Second Report on the public credit: "To prevent a progressive accumulation of debt", said Mr. Hamilton, "the creation of debt should always be accompanied with the means of extinguishment, the true secret of rendering public credit immortal"

If we are to avoid a ruinous inflation in this country we must no use dilutes the value of money. | quit diluting our currency by And whether for purposes of war, deficit financing. We should withor in some make-work project of out any delay withhold expen-peace, an expansion of public dttures of public funds that cancredit for unproductive purposes not currently be compensated by

Dangers of Planned Economy

And this brings us to a very brief discussion of a planned and controlled economy.

There are those who agree that government debt cannot go on increasing without dire economic consequences, but they contend, and the thought tenants the minds of some men high in government, that government can so plan and control our economy that high national income can be assured, out of which high taxes can and will be freely paid.

The idea that our economy can ernment is penetrating insidiously into the body of American democracy. How grotesque!

It is a fallacy buried in a grave proper stability in our price struc- 1644 years deep. From fabulous last best hope on earth"!

Are German Banks A Threat To World Peace?

making their selections. result the banks are enjoying an increasing public confidence, under a new and clean management.

The second step, breaking the highly organized, machine-like, banking system down into small functional units, is one of the most important steps yet taken to prevent Germany from again becoming a warrior nation. This huge banking monopoly was the instigator as well as the supporter of the huge economic bludgeon which enabled Germany to smash Europe to her knees.

Banks Build Industry

In Germany, more than in any other country, the money for industry has been obtained from Germany does not have the traditions of private investment, such as those of the United States and Great Britain. Because Germany's industrialization came relatively late competition from other industrial powers left too little time to develop a class of private investors, or to build up capital reserves out of profits. To get capital in a hurry, industry turned to the banks.

The banks willingly committed themselves heavily in industrial shares. This is forbidden in the

Rome with all of its powers of Empire down to O. P. A., no plan dustrial investments but left just for controlling an economy has ever been durably successful.

Between Plymouth Rock and there was a period of 200 years of American history when every conceivable type of economic failed. In the history of many Utopian societies that grew for a few brief years in this country soon withered, we can find notha planned and controlled economy can succeed.

Ours is a price economy. Prices are values and value knows its Gesellschaft. laws and follows them in spite of decrees and penalties. Prices will reflect eventually every human Second Report on The Public And all the king's horses and all the king's men can't stop values with natural human and economic

laws. I end as I began . .

If we want to continue to live and work in a free economy we must combat economic ignorance. We must, all of us who want to work and live in a free economy. explain in everyday language just how a free economy works. "Our World to Build"?

For our part of that world let us solidly build on political and economic principles through which America has grown great and there are tidings of a new and still greater America beyond the sunset.

America grew great through problems overcome by self-reliant men, free thinkers, independent spirits. Let us not make the mistake of trying to solve our current problems by adding them together in government. Individualism is the hope of this country—any affinity for some collectivist form of economic effort would be the affinity of the moth for the flame.

Improve traditional principles where we can, but let us ever keep through the advancing present a grand unity with all of America's great past.

We owe this to ourselves. We owe it especially to the young men and women of America who rest under white crosses all over changing waves of all the seas.

United States because industrial salvation. It meant the industrial As a stock shares are not a completely prosperity which always goes with stable or liquid investment. Their value fluctuates from day to day. If a bank buys industrial shares day, there is no guarantee that it can sell the shares for the same amount when the depositor comes to withdraw his money on the next.

Furthermore, the banks in Gernany actually created money to make investments in industry. All banks have the unique characteristic of being able to lend money they do not have. This is because people are content to accept the bank's promise to pay, in the form of a deposit slip or check. A borrower therefore usually receives a deposit, uses it to make payments by checks, and the checks in turn are simply deposited in another bank account. No cash actually changes hands. The result is that money is created out of thin air.

German Banks Combined

The Germans used this system to great advantage. Not having a minimum reserve law, (which would prevent the banks from lending out more than a safe percentage of their cash) the German bankers loaned out their money until their reserves fell to 6% or less of the cash on hand. This increased their ability to make inenough cash to meet daily transactions. This low working margin caused the banks to be very sensithe Declaration of Independence tive to economic disturbances. To make these banks more stable and to provide even greater money creating powers, the banks tended control was tried and every one to combine into large semi-monopolistic units dominated by centralized banks, with headquarters in Berlin and in the middle 19th Century and throughout the country. The most important of these are the soing to justify any prediction that called "Big Five" banks, the Deut-Dresdner, and Commerz sche. banks, the Berliner Handelsgesellschaft and the Reichs-Kredit-

But all this increased moneycreating efficiency demanded general stability if it was to survive. If depositors suddenly lost confidence and demanded cash, there was bound to be a collapse. The banking system woud not have enough cash to meet the demands. Therefore, the banks had to protect the apparent value of their non-liquid industrial investments. This was done by placing their own people on industrial Boards of Directors, and by encouraging the formation of industrial cartels and trusts. Firms which refused to join the cartels or other combinations, or which threatened the value of some large bank investment by producing goods cheaply, could not get credit, and therefore found it impossible to con-When banks tinue in husiness. were heavily committed in two firms in the same business, they encouraged the two firms to combine rather than lose money by beyond the danger point. competing.

Thus the banks were part of the great concentration of economic power in Germany, and the chief instigators of that concentration. The concentration of economic power was one of the first steps in the mobilization of Germany, and was one of the reasons Germany was able to organize and support World War II.

Secret Rearmament

Between the two wars, secret industrial armament was carried on in Germany. Money owe it to our grandchildren. We provided for this by the large banks. The German bankers, in their capacity as directors and owners of many of the most imthe world and beneath the ever- portant industries, participated in part of the future financial pothe quiet and long-drawn-out pre-They died for this America, "this parations for war. To many bankers, the advent of Hitler meant Potsdam Agreement.

rearmament, and the rescue of the assets of their banks which were frozen in industrial firms. It is with a depositor's money on one not surprising that the two most prominent bankers in Germany-Dr. Schacht and Baron von Schroder-were early and generous supporters of Hitler.

Under the nazi regime, banking system played an indispensable part in financing war. Its great money-creating efficiency made it possible to provide the huge funds needed the rearma-ment and aggression, without causing obvious inflation such as that which ruined Germany during the last war. The banks, and particularly the central bank or Reichsbank, also provided tech-nicians to assist in looting the occupied countries, without which Germany could not have continued to fight. Individual German banks established or used existing agents to exploit all Europe, both for private profit and for the good of the nazi regime. "Respectable" German bankers, were used to preserve nazi assets in Switzerland and the other neutral coun-

Decentralized Banking

All this is now well known by the leaders of Military Government. The first two steps will prevent it from happening again. The denazification of the banking system will remove those persons who desire to renew the excess money creating powers of Gerwhich can only be used profitably for war; and the second step will remove the system which permitted these persons the opportunity to build a war machine.

Under the new decentralized banking system each Land will establish a central bank. This will be a banker's bank for clearing checks, and for the movement of funds between banks of other Laender in the U.S. Zone, and the other zones of Germany. These central banks will also help the commercial banks meet extraordinary demands for credit and act as bankers for their Land Governments. However, they will not print their own currency or be permitted to compete with the commercial banks for ordinary commercial business. Coordination and uniform supervision of the three Laender banks will be assured by the establishment of a banking council for the entire S. Zone.

The commercial and savings banks, which will deal directly with the public, will be required to keep a minimum reserve of their assets on deposit with the central bank of their Land. These reserves will be on hand to settle clearing balances. Keeping these reserves on deposit with the central bank of the Land, will provide increased stability and safety for the individual banks, since they will no longer be able to deplete their liquid reserves

No bank will be permitted to have or establish branches outside the Land where it locates its principal office. The predomin-ance of Berlin will be ended. Decentralization will continue with the aim of limiting all banks to the Landkreis or Stadkreis in which they choose to locate.

This program is not intended as the final word on the German financial system. It is, rather, a step forward in a direction which is known, whose length or exact path may well be modified by future quadripartite decisions. It is carefully planned, however, so that no backtracking will be necessary, so that it will form licy, which in turn forms part of the principles established by the

Observations

(Continued from first page)

cisco, Potsdam, at London last Fall or during the recent Vishinsky-Bevin brawls, or when Uncle Joe expounded his "Mein Kampf" a fortnight ago; and besides, a war would all the more assure the coming of a real inflation with a rise in equities.

"There are doubts about the Administration, and its economic program is clouded"-true, but surely this represents nothing new; if anything, the Government's aims are less clouded and less antibusiness than they were during the feverish market rises of a month ago. Again, the labor situation and the slowness of reconversion are complained of-but the bull market adage is never to sell the market on strike news; since the bullish excitement there has been settlement of some major strikes; and all figures show the attainment of record peacetime production.

Then there is the complete psychological turnabout toward the factor of delay in favorable events, which is deemed constructive in bullish periods. During the recent period of rising prices such delay was demonstrated as a bullish point on the theory that the "ammunition" of good news was not being expended. Now with the reversal in market prices, the completely opposite version is embraced.

Only one prediction about the market can be made with absolute confidence. With the next upswing in prices, "Wall Street" will again perform a psychological somersault, completely reversing its interpretations of the important continuing political and economic elements-ex post facto, of course!

In its indicated intentions in controlling capital investment and Stock Exchange activities, the British Labor Government is conforming to its all-over policy of "gradualism." In this segment of the economy, as elsewhere, it is unwittingly developing a hybrid situation which is neither "capitalist fish" nor collectivist fowl."

Both in the principles pertaining to the widely-heralded Investment (Control and Guarantees) Bill, and in its contacts with the Stock Exchange, the new Government is to a great extent pursuing traditional policies. As the "Economist" of London has said, in commenting on the new Capital Issues Committee: "These administrative shackles are no socialist revolution. . . . the Government have gone out of their way to avoid change, either for better or for worse, in the existing form of control." It seems that in lieu of engaging in thorough overall planning out in the field, the National Investment Council is functioning as a coordinating body "in the council chamber." And in many ways the central direction is restrictive rather than expansive.

The pervasion of capital and security-trading regulation by this gradualism, which has keynoted the policy toward the Bank of England, is evidenced by the exclusion of the all-out planners by the Treasury's concepts of control. Thus there is now general agreement that the Capital Issues Committee, in lieu of being an instrument of reform, will be closely guided by the Treasury and will not radically depart from its traditional policies. In the recent words of the "Economist," the Government measures "are not even a blueprint for an investment policy; they merely crib a piece of Treasury machinery adopted by their predecessors, and add a little free-hand drawing of their own."

The basic emphasis of the new financial legislation is on the control of new capital creation; but once the securities have been created, their marketability, as well as the trading practices respecting previously outstanding issues, is quite unfettered. The activities of the City (London's Wall Street) are for the most part remaining self-administered and autonomous, within the framework of basic Government policies like those arising from foreign exchange control. On specific matters like issues on bonus terms and rights, the Treasury has informally given general directives to the Exchange authorities, leaving the technical codification and administration entirely to them.

"Reform" in the Stock Exchange sphere is occurring by way of form rather than substance. In the recent words of an official of the Share and Loan Department, there has been "merely a tightening up of previous somewhat informal arrangements. The new lists of requirements are those which have for a long time actually been in effect administratively." As to whether the Government will in the future participate administratively in Stock Exchange supervision, the best informed British observers believe that this will depend on how long the Labor Government will remain in power, but that in any event the degree of control here will continue to lag considerably behind that over other segments of society

In Canada there is no centralised qualititative control or direction of the course of investment; and there is none in prospect. However, as in England and in the United States, there has been a great drive on interest rates and yields, through central bank open-market operations-with quantitative repercussions on bond investment, speculative activities, and general inflation of capital markets.

. 132

The marked retardation of British nationalization in industry as well as finance, can be appreciated from the week's remarkable speech by the National Union of Mine Workers leader, Will Lawther. Speaking like the toriest Conservative M.P. at a labor rally in Newcastle, he cautioned his fellow trade-unionists that publicly owned industries must be run independently of political control. On the question of timing of reform he was similarly orthodox, saying "you cannot expect, nor should you attempt, to bring all industries under public ownership simultaneously . . . you have got to proceed by January

Senate Group Approves **Temporary Vet Housing**

nesses, a housing subcommitte of stated. the Senate Education and Labor Committee, on Feb. 15, approved a bill introduced by Senator James \$191,900,000 for remaking war temporary homes for veterans. provide 100,000 more temporary measure as an "essential" preliminary to the Administration's veterans' emergency housing program, were, according to advices from Washington to the New York Times", Senator Mead, Administrator Wilson W. Wyatt of the Philip M. Klutznick, Commissioner of the Federal Public Housing Authority, which handles the program. The "Times" advices continued:

'As a stop-gap, however, this emergency housing can supply livable and decent shelter for veterans with relatively little outlay of new materials and labor,' Mr. Wyatt said.

'The officials reported that applications from municipalities and colleges exceeded 331,000 units or over three times more than could be supplied under the previous appropriation.

'A total of 557 local governments have applied for 191,000 units, while 889 educational institutions have applied for 140,000 units, according to Mr. Klutznick, who estimated that the cost per unit of removal and re-establishment would amount to around

"Senator Mead declared that the additional 100,000 units 'would assure full use of the Federal Government's existing housing resources to help meet the emergency,' and added:

'In practically every city or town throughout the country, veterans and their families are in desperate need of housing. On practically every college or university campus, the veterans' educational program under the GI Bill of Rights is jeopardized by lack of housing, particularly for married veterans. In fact, there are numerous accounts in the newspapers of colleges turning away married veterans solely because there is no housing for

Market Transactions In Gov'ts in January

During the month of January 1946, market transactions in direct and guaranteed securities of the Government for Treasury investment and other accounts resulted in net sales of \$8,137,000, Secretary Vinson announced on Feb 15

The following tabulation shows the Treasury's transactions in Sovernment securities for the last two years:

| 1 | 1344 | | |
|---|-----------|--------------|-----------|
| 1 | January | \$9,924,000 | sold |

Warns of Severe Inflation

(Continued from first page)

"The interest return on the investments of a life insurance company is a major factor in deter-M. Mead (D.-N.Y.), designed to mining the cost to policyholders supplement an appropriation ap- of life insurance protection. The proved several months ago for more that interest rates are depressed, the greater is the cost of g and Army barracks into protection to policyholders. As an example of how the current low The additional measure would au- interest rates penalize policyholdthorize a further \$250,000,000 to ers, a 1% increase in the net return on investments of the Equitdwelling units for ex-servicemen. able Society to around 3.81% as The witnesses, who described the it was in 1933, would be equivalent to \$35,000,000 to \$40,000,000 per year, or not far from the entire amount set aside for payment of dividends on individual policies in 1946.

"Public officials who boast of the beneficial effects of low inter-National Housing Agency, and est rates, brought about deliberately by Government controls of recognize the costs that such a policy involves, immediately and in the long run.

"If prices and the cost of living continue to go higher, all life insurance policyholders and their beneficiaries will eventually find that the dollars which they are paid will not purchase the goods and provide the services which were planned when their policies were taken.

"What the threat of eventual shrinkage in the value of life insurance protection through inflation means to policyholders can be seen from the fact that current payments by life insurance companies to policyholders and beneficiaries are upwards of \$2,600,-000,000 annually. If inflation should result in reducing the real value, or purchasing power, of such continued payments by onehalf, the annual loss in life insurprotection alone would amount to \$1,300,000,000. This sum is equivalent to interest at onehalf of one per cent on \$260,000,-000,000. The present benefits of low interest rates are, to say the least, questionable, if the eventual result of the policies which make for low rates is social insecurity.

"Low interest rates and high prices, however, are merely symptom of inflation. Inflation itself is debasement of the currency-and this stems from the Government's fiscal policies."

Pointing out that bank deposits and money in circulation have skyrocketed to \$175 billions currently from \$55 billions in 1929, \$65 billions in 1939 and \$112 billions in 1943, Mr. Parkinson declared that a chief cause of this has been the inflationary results of the sale of Government bonds to the banks by the Treasury or the purchase of Government bonds on the market by the banks.

Mr. Parkinson outlined a fourpoint program to avert the threat of extreme inflation, as follows:

- 1. Balance the Federal budget and stop any kind of deficit financing.
- 2. In whatever tax reductions we is still sufficient to supply a surplus out of which, annunow burdens the people of this country.
 - The Federal Reserve authorities should abandon their fanatical desire for "easy money" at any price, and establish a fiscal policy which will look to soundness in the future. Specifically, they must stop trying to depress interest banks' purchase of Governcosts all the people.

After hearing only three wit- their families," Mr. Parkinson, 4. The member banks of the Federal Reserve should exercise their legal control of the boards of directors of the local Federal Reserve Banks to help the national Federal Reserve Board and the governors of the local Federal Reserve Banks to escape the control of fiscal policies by the Treasury so that the Federal Reserve authorities may carry out the needed fiscal changes recently indicated by Governor Eccles and President Sproul.

Gardner Succeeds Bell In Treasury Post

President Truman's choice of successor to Daniel W. Bell, as Undersecretary of the Treasury, is the money market, are failing to O. Max Gardner, former Governor of North Carolina, advices from Washington to the "Wall Street Journal" stated on Feb. 19. A Washington lawyer since 1933, Mr. Gardner is not known to have had any previous experience in banking, but is said to have dealt with corporate finance in his legal capacity. It is also stated that he has a wide reputation as a tax attorney. The "Wall Street Journal," in reporting that Mr. Gardner's nomination had been sent to the Senate, went on to mention that he had been closely associated with Secretary Vinson for the past several years, having been Chair-man of the Advisory Committee to the Office of War Mobilization and Reconversion, of which Secretary Vinson was also a member. Mr. Gardner's nomination was understood to be in accord with the wishes of Mr. Vinson. Also, he is generally accepted politically within the Democratic party.

> The nomination of Mr. Gardiner to be Under Secretary of the Treasury was sent to the Senate on Feb. 18.

Fairchild Index Says Retail Prices Showed Decline in January

Retail prices in January, based on the Fairchild Publications Retail Price Index, lost the fractional gain that was recorded in December. The Index, as of Feb. 1, at 113.5 shows a decline of 0.1% to the same level as on Dec. 1. The fractional decline in the Index was due to OPA readjustment in several items. The composite Index shows a gain of 0.1% over the corresponding period a year ago and an increase of 27.7% as compared with the 1939-40 low.

The Fairchild report issued Feb. 18 also said:

"Changes during the month occurred in piece goods and wom-en's and infants' underwear. As compared with a year ago each of the major groups showed fractional changes, with piece goods and women's apparel showing the greatest changes.

"In contrast to the previous may make, we must see to it month, many of the items used in that the Government revenue the Index showed changes. This includes silk and woolen piece goods, sheets and blankets, aprons ally, there can be some re-duction of the huge debt that wear, men' underwear and shirts, men's clothing, infants' under-wear, luggage and electrical household appliances.

"Changes in prices for the remainder of the year will be much greater than during the past 12 months, according to A. W. Zelomek, economist under whose supervision the Index is compiled. He points out that the wage and rates by adding to the na-price announcement will be re-tion's money supply through flected in higher retail prices. The gain in wholesale levels bement bonds, either directly or tween now and the end of the year on the market. A low interest may approximate 7½% and part rate is not worth the price it of this will be reflected in higher retail levels."

International Aspects to St. Lawrence Seaway

(Continued from first page) lies like a great highway of commerce stretching for 2.400 miles from Newfoundland into the industrial and agricultural heart of the United States and Canada, its potentialities for producing wealth limited only by some rapids between northern New York and Montreal where the existing canals are too shallow for most ocean-going vessels. The question now before you is whether this short obstruction should be removed.

Secondly, the legislation would provide for the construction in the International Rapids Section hydroelectric power works which would convert the tor-rential flow of the St. Lawrence into one of the greatest sources of cheap power in the world. The single power dam to be built will have a generating capacity of 2,-200,000 horse power half of which would be made available to Canada and half reserved to the United States. The bill before you would wisely provide that the United States share of these power facilities be turned over as a public power project to the state of New York which will share with the Federal Government in the cost of the project.

It is estimated that all of this will cost the United States some \$285,000,000 on the basis of 1941 figures, of which about one-third would be paid by New York so that the total cost to the Federal Government would be something under \$200,000,000. Some of the work allocated to the United States and included in this estimate, such as the MacArthur Locks, has been done since 1941 and there will be some changes in these figures as the result of price variations. The Corps of Engineers will address themselves to this point.

International Negotiations Required

What is the interest of the State Department in this matter? The obvious basis of the State Department's interest is that for geographical reasons the Lawrence project must be built in cooperation with Canada. The working out of the plans has required negotiations over a period of many years with the Canadian Government on a variety of questions such as sharing of the cost, engineering plans and so forth, in the negotiation of which the State Department has cooperated with other agencies of our Government. The result of these negotiations is the Agreement of March 19, 1941 with Canada the approval of which is provided for in the pending legislation. The negotiation and execution of Agreement in cooperation with Canada would in itself constitute a remarkable example of international cooperation.

But, it may be asked-aside from this are not the issues involved pretty much of a domestic character just as in any other public works program? The answer to that is obviously "yes-in part"-but there is a larger interest that our Department has in the matter which in turn is intimately related to the principal question which must be asked about this legislation, namely What does the United States get out of all this to justify the expenditure involved?

Promotes National Security

From the standpoint of our national security, the answer to that is clear. I have here a letter from now must ship its products not made available across the Skagthe Secretary of War which states only within the United States but errak for consumption in Denthat the construction of the Seaway is a matter of importance to rot only from within the United water power development is con-

staument which I hereby offer abroad. For all of this a water for the record reads as follows: Feb. 16, 1946

The Honorable The Secretary of State. Dear Mr. Secretary:

in conformity with your request of 5 November 1945, the Joint chiefs of Staff have examined the matier of the Great Lakes-St. Lawrence Seaway and Power Projects and their effect on the national security.

The principal factors which influence the consideration of these projects in the interest of the national security are that, in the event of a national emergency, they would provide:

(a) Shipbuilding and ship repair facilities, located in a relaively secure area, capable of expansion and of conversion for handling deep sea vessels, which could be used to supplement coastal shipyards.

(b) An additional line of communication, navigable by ocean shipping, which could, by diversion of some cargo for overseas destinations, ease the strain during wartime on rail transportation and port facilities of the East and Gulf Coasts. This seaway could also serve as a reserve route to be used in the event of interruption of other routes by enemy action.

(c) A large source of cheap, dependable power, which can be generated without the use of coal or other critical combustibles and without use of crowded rail or nighway transportation facilities; this power would be available in an area which, during World War II was a power deficit area.

The foregoing factors prompted the Secretarly of War to support the projects in 1941 in the interests of national defense. In the light of the experiences of World War II, in which total mobilization became a near actuality, it is evident that the prospective increase in our war potential that would have been contributed by these projects, had they been completed, would have been of material assistance in prosecuting the It is probable that attainment of success in any future world conflict would require utilization of the ultimate production and transportation facilities of the United States and possibly Canada. The Joint Chiefs of Staff consider that it would be in the interests of national security to complete projects, such as these, which would have distinct military advantages and would materially increase the industrial and transportation potential of the United

Although the St. Lawrence Valey is a possible route for invasion of eastern North America, the Joint Chiefs of Staff consider that construction of the proposed works would not facilitate invasion by hat route since the power plants, ocks and canals could readily be rendered unusable in the event such action became necessary

ROBERT P. PATTERSON,

ven greater. The heart of our gricultural and industrial wealth ies in the great middle section of he United States around the Great Lakes. Almost unique among the highly industrialized sections of the world, our middle western manufacturing areas have grown up far away from ocean transportation. One of the chief easons for this, of course, has een low cost inland transportation on the Great Lakes. But since the First World War this bers undoubtedly have seen rearea has progressively grown into a surplus producing area which generated in Norway will be to foreign countries and which mark. In the Soviet Union, China must procure its raw materials and other parts of the world, agreement with Canada may not

route to the sea is needed. Our farmers in this area have competed in world markets despite their transportation disadvantages.

The time has come when we can no longer be profligate with our natural resources. To main-ain our production in the middle west at the increased rate which will be necessary to supply jobs or our working population-including returned service men-at the standards of living to which our people justifiably aspire, we must make use of every single profitable resource that we have available. Our great civilization in the middle west has competed in the world market despite our higher living standards and higher costs, not only because of the special genius for production of the American people but because we have had in the United States conditions of climate, natural resources and fertility of soil which have made it possible for us as a nation to get more out of what we put into the job of producing goods, relatively speaking, than any other country in the world. We have had in other words a margin of superiority in this respect that is the basic reason for the miracle of our industrial development and of the staggering production performance of the United States during this war. We must make our plans carefully to maintain this margin of superiority and to go constantly forward in our industrial and agricultural development. For this purpose, we have negotiated and submitted to the Congress for approval the agreement with Canada that is now before you.

The St. Lawrence project has been described in the Department of Commerce Survey of 1941 as "among those projects which will reduce the expenditure of human energy per unit of prod-uct produced." It will make it possible not only to cope with the transportation problems will arise as our present Great Lakes industries call upon the ouside world for more and more caw materials, but it will also help to serve other industries which may be expected to develop in this area in the next 30 years. It will enable the farmer to get more out of his wheat crop and perhaps to make his crop larger to the extent that he can economically compete in the world market. Finally, as our efforts to build up an expanding world economy are successful, the Seaway will assist us in maintaining our share of the markets of the world-and will make it physically possible to move the increased volume of trade to which we must look forward.

Power Resources

Added to this we shall be harnessing the waters of the Interwealth and added purchasing power for our nation. We have already seen what the TVA, the Boulder Dam and the Grand Coulee have done for their respective areas. The part of the United States which would be served by the St. Lawrence power development has been a power deficit area and also needs the stimulation of low cost power. The value of water power has long been recognized in other countries. The Committee memcent reports that water power

While the deep water navigation through the St. Lawrence will promote international trade, the power made available by this project will serve the same end. Every bit of power that we add to our capacity increases our ability to use the world's raw materials and to provide the finished goods which are needed in our own and other areas. The time has come when we can no longer afford the enormous waste of wealth that is involved in our failure to harness the energy of this river.

Not least among the advantages of the St. Lawrence project will be the benefits that it will bring about also for our neighbor Canda. For years the waters of the St. Lawrence have been a source of mutual concern to our two The Canadian Govcountries. ernment has already made important improvements in waterway at its expense which the United States is entitled to and does utilize free of charge. The cost to Canada of the Welland Canal and certain less important improvements in the system has been about \$133,000,000. It is proposed that Canada will be given credit for these expenditures in arriving at the over-all division of cost between the two countries in the construction provided in the pending agreement. Furthermore, the economic development of the Great Lakes Basin in Canada is naturally of interest to us since Canada has long been our second best customer and we in turn are Canada's best customer. The stronger that Canada becomes the better it

Effect on Railroads

The Department of State realzes that there are interests in this country that object strongly to this program of construction. Some railroads believe that their capital investment will be prejudiced through diversion of traffic to the Seaway. Certain port cities entertain the same fear of loss of traffic. Great Lakes shipping interests believe that the entrance of ocean-going vessels into their territory will injure them economically. Coal interests allege that they will lose all or part of the Canadian markets. And power interests raise the controversial issue of public power. Other witnesses will appear in favor of the St. Lawrence project who can testify with greater authority on these matters than I. However, there is good authority for saying that these fears are unjustified. The St. Lawrence Survey of the Department of Commerce completed in 1941 indicates for example that the prospective increase in freight traffic in the United States over the next 15 years will be such as to make the St. Lawrence Seaway an absolute necessity to help in handling our ocean bound development of our national vealth the advantages of the construction of the Seaway. traffic. Similarly the survey inexpansion that will be stimulated through this project.

Every technical and mechanical advance in the history of the world has been viewed by some with alarm. This was true of the railroad, the automobile, the airplane-of the development of each new resource and of each section of our country. But our country has become great, not by listening to these fears but by utilizing every resource of brain or nature.

Constitutionality of Project

Fears have also been raised by the opposition to the St. Lawrence project that the pending

certain that the development of our power resources keeps pace with our industrial development. State believes that this position is incorrect and that the participation of the United States in the construction of the St. Lawrence project may legally be brought about through legislation to approve and effectuate the pending agreement. In support of this contention I have filed with the Chairman of the Subcommittee the full legal argument to substantiate this position. memorandum also contains a statement of the historical and legislative background of the St. Lawrence project. Since the memorandum is voluminous and since sufficient copies have not yet become available for distribuion to all members of the Subcommittee, I shall be glad to appear again later during the hearings if the Subcommittee desires in order to discuss this aspect of the legislation further.

Under the Constitution, Congress is given power to regulate commerce with foreign nations and among the several states. This clause has for over 100 years been construed by the Supreme Court to vest in the Congress plenary powers to control navigation and to authorize the construction by private interests or by the Federal Government of projects relating to the improvement and utilization of navigable waters including hydroelectric projects. Under these powers the Congress has authorized the construction by the Federal Government of navigation and power projects of profound significance to the economic life of the United States such as the Tennessee Valley Au-thority, the Boulder Dam and the Columbia River projects.

The Congress is not deprived of its powers to enact legislation to authorize the construction of projects of this nature simply because such legislation is related to or is designed to effectuate an agreement with a foreign country. In fact there are many precedents in the history of our relations with Canada and with other nations of the exercise of the powers of Congress to authorize, to approve or to carry out agreements with foreign countries in the field of the delegated powers of Congress. Congress has authorized the President to enter into postal treaties; to make agreements with foreign countries with respect to patent and copyright protection; and to enter into reciprocal trade agreements and it has successively extended the trade agreements legislation over claims that the procedure involved is unconstitu-The Congress through joint resolution has authorized United States participation in the International Labor Organization, UNRRA and the Food and Agriculture Organization and finally in the last session of Congress passed the Bretton Woods Agreements Act authorizing the President to participate in the International Monetary Fund and the International Bank for Reconstruction and Development. The latter was one of the most important pieces of legislation ever passed in relation to an agreement with a foreign country. During the consideration of the Agreement in the Senate the question was raised as to the constitutionality of the procedures and the State and Treasury Departments filed with the Committee a memorandum supporting the procedure on the ground that the legislation was within the power of Congress to legislate on financial and monetary matters. Other examples of agreements entered into by the United States in conjunction with legislation are the International Silver Agreement, the International Wheat Agreement, the Stabilization Agreement of 1936 and various aviation agreements, all of constitutionally be acted upon by which have been entered into unour national defense. The full States but increasingly from tantly increasing. We must make the Congress through legislation, der the authority of existing leg-

agreements after the first World War which were negotiated by a committee of representatives of the executive and legislative branches of the Government pursuant to Congressional authorization and later submitted to the Congress for its final approval.

Importance to Foreign Relations

These agreements would appear to establish that matters of importance to the foreign relations of the United States have since the early days of the Republic been concluded through agreements entered into by the executive branch with legislative sanction. The validity of agreements with foreign countries has been frequently passed upon by the Supreme Court and never has the validity of an agreement so executed-or of legislation with respect to such an agreementbeen held invalid by the Court

It is not claimed that any foreign negotiation may be concluded in this manner. There are obviously certain classes of foreign arrangements which must be reserved exclusively for the treaty power. During the last session of Congress probably more important treaties were submitted to the Senate for its advice and consent to ratification than in any other corresponding period in recent history. Furthermore it should be made clear that in considering the St. Lawrence Agreement, we are not dealing with the type of so-called "executive agreement" that can be entered into by the President under his own, exclusive powers as chief executive and diplomatic officer of the Government and commander-in-chief of the armed forces. There are admittedly numerous types of purely executive arrangements of this nature which are not relevant to the problem at issue here. What we are concerned with in this case is a foreign agreement which by its terms does not become effective until the necessary enabling legislation of the two countries has been obtained and which, because of the very nature of its subject matter, cannot be carried out in the absence of such legislation. The precedents and cases referred to above make it clear that it is entirely appropriate for United States participation in this great project to be authorized in this

The history of our relations with Canada contains many examples of arrangements of great importance to the economic relations of the two countries which have been concluded through the enactment of reciprocal legislation by the legislative bodies of the two countries. Thus joint Commissions have been created to supervise the construction of great bridges over international streams such as the Niagara and St. Lawrence rivers and to supervise the operation of these bridges. In 1893 the two countries concluded through the passage of reciprocal legislation and simultaneous proclamationsan agreement extending to nationals of both countries reciprocal privileges to render aid to vessels distress in the waters of each country. In 1911 President Taft ing of tariffs, which agreement provided that it would come into force when the necessary enabling legislation had been obtained in both countries. The United States Congress acted favorably upon the agreement but it did not become effective in the absence of corresponding action by Canada.

Expenditures in Foreign Countries

It has also been lightly said that Congress cannot authorize the excontention by numerous and long-Harbors legislation has frequently, tern."

islation, and the debt funding beginning as early as 1874, authorized the improvement by the United States of boundary streams, including connecting channels in the Great Lakes System, even though work has been required to be done in Canadian territory at the expense of the United States. Legislation of 1939 authorized the expenditure of some \$30,000,000 in improving the connecting channels between Lake Huron and Lake Erie near Detroit. The Alaska Highway, although finally built under the President's war powers, had a long record of legislative action by Congress, such as the Act of August 1935 authorizing the President to enter into an agreement with Canada for the survey and construction of a highway between the United States and Alaska. Similarly there is a long record of Congressional action with respect to the Inter-American Highway which has been built in large part with appropriated funds.

A further basis for action by Congress on this project is furnished by the previous treaties to which the United States is a party and under which the United States is given the same rights as Canada to navigate in the Great Lakes-St. Lawrence System including the wholly Canadian sections thereof. These treaties having vested in the United States reciprocal rights to navigation in boundary waters and in the other waters of the Great Lakes-St. Lawrence System, the only question remaining is the method of further developing the usefulness of these rights through reciprocal improvements. For this purpose the parties agreed upon such a method in the Boundary Waters Treaty of 1909 whereby special agreements may be entered into by the two countries expressed by the concurrent or reciprocal legislation, to provide for uses, obstructions or diversions of boundary waters. The 1941 Agreement with Canada is a special agreement which under the 1909 Treaty may be brought into force as specifically there provided by reciprocal legislation.

Finally, it has been said that the 1941 Agreement may not be brought into force through legislation because Articles VII and IX purport to affect rights created by previous treaties. Because of the doubts raised by this contention and in order to facilitate consideration of the project on its merits, the pending legislation provides for the omission of these articles from the approval of the Congress. The Department of State will, of course, follow the provisions of the bill, if Congress enacts it, to negotiate a treaty with Canada covering these two Articles. This removes the argument.

Thus it is hoped that the way has been cleared for the consideration of the agreement on its merits with full assurance of the constitutional validity of the procedure which has been used.

Call Some Work Stoppages Akin to Political Maneuvers

Some work stoppages appear more like political maneuvers of their respective nationalities in than strikes to improve working conditions and obtain wage increases, Senator Arthur Capper, concluded an agreement with Republican of Kansas, said in a Canada for the reciprocal lowerstatement at Washington on Feb. 17. Mr. Capper, Associated Press advices said, contends that "there is an element in labor leadership that is more interested in promoting discord than in the welfare of the workers." The Associated Press further quoted him:

"This element has worked its way into key positions in some few labor unions in key industries, penditure of funds for construc- and seems to be promoting strikes tion in foreign countries. The for the ultimate purpose of changmemorandum filed refutes this ing our form of government to standing precedents. Rivers and correspond to the Moscow pat-

Objections to St. Lawrence Seaway

(Continued from first page) Waterway Treaty providing for waterway. This treaty was referred to the Senate Foreign Relations Committee and extensive hearings were held during 1933. After these exhaustive hearings it was reported favorably and considered on the floor of the Senate for a considerable period of time when it was finally voted upon. The treaty was rejected by the Senate in March of 1934 by a vote of 46 to 42; therefore was not approved by the Senate because lacked the necessary twothirds vote.

The 1941 Agreement

Next, an agreement was entered into between the United States and Canada dated March 19, 1941. This agreement provided for the conclusion of the seaway and power project. Because it was submitted in the form of an agreement instead of a treaty, the matter was referred to the Senate Commerce Committee in the Senate, but no action was taken by that committee on the agreement.

On Sept. 28, 1943, Senator Aiken introduced in the Senate S. 1385, a bill to approve the agreement which was entered into on March 19, 1941.

This bill was referred to the Commerce Committee of the Senate and the Committee held extensive hearings. The hearings were confined primarily to the constitutional issue of whether the agreement should be submitted to the Senate for its advice and consent to ratification, as in the case of a treaty. Although no formal report was made by the Committee, the Committee was of the opinion that the matter properly constituted a treaty instead of an agreement and that therefore it should be considered by the Senate Foreign Relations Committee instead of the Commerce Commit-However, an effort was made to bring about the approval of the 1941 agreement through an amendment from the floor of the Senate on a pending Rivers and Harbors Bill. This amendment was defeated on Dec. 12, 1944, by a vote of 56 to 25 and thus the agreement was rejected.

Now, a further effort is being made to secure the approval of the 1941 agreement by the introduction of S. J. Res. 104, provision being made in this pending S. J. Res. 104 for excepting from the approval of Congress certain articles of the 1941 agreement and this resolution has been referred to the Senate Foreign Relations Committee where hearings are now under way.

Last week, the proponents of S. J. Res. 104 were heard by the Senate Foreign Relations Committee while the opponents are being heard this week.

Would Affect New York Ports Adversely

While there are two strongly supported sides to this vital and important question contained in able because of material, equipthe record, there is considerable evidence presented by reputable and from reliable sources indicating that the seaway will adversely affect the railroads, the canal systems, the great ports of Buffalo and Albany as well as the greatest of all ports, that of Greater New York. There is evidence in the record that it will likewise leave a blight upon the communities of the southern tier, those along our barge canal system and also those communities whose futures depend upon the big centers of population that will be adversely affected by this legislation.

Would Cripple Great Lakes Shipping

There is evidence in the record days of the war. from the spokesman of the ship-

to the effect that their industry the construction of a 27-foot will be crippled by the cheap competition of alien tramp steamers which will compete with them for available traffic. Not only will the fleets that ply the Great Lakes and those that navigate our barge canal system suffer from this competition, but the seamen who man these ships and whose wage standards and working conditions are in keeping with American standards and practices, will find themselves sharing their seasonal employment with the underpaid and overworked seamen employed on foreign flag ships. There are to be found in the record also, statements made by representatives of the Power Authority of our State. There are likewise to be found, resolutions adopted by our legislative body memorializing the Congress on this subject.

Other spokesmen have been heard who presented their views as to the position taken by our State on this vital question. It is my opinion that a fair and reasonable review of the entire record as it pertains to the policy which our State has adopted, will make it abundantly clear that the State, over the years, has favored the power project, while opposing the seaway.

Naturally, there are to be found men in public office who favor the seaway, as well as those who are pronounced in their opposition to it. But the policy I have in mind is that which has received the approval of our legislative body when called upon to speak for the people, when resolutions concerning the seaway were before them for action. In the debates upon this question before idly as conditions permit. the Senate of the United States in 1934, the question of separating the power from the seaway was raised and it is my opinion that if the separation had been agreed upon at that time it would, in the end, have unquestionably received the Senate approval.

In the hearings and debates on the legislation creating the Power Authority in our State, the guestion of power development was the one question that was emphasized. Because the record with reference to power development is clear and because I have made my position known time and time again in support of power development, I shall discuss with you in greater detail the matter of the seaway, which involves the question of transportation.

Already Have Surplus of Transportation

Under present circumstances we have a surplus of transportation here in our State. Our systems of transportation, highways, airways, waterways, and railways, for the most part, radiate from the great port of New York to the principal cities and shipping points of our State. During the war when the airlines, barge canal lines and highway rtation systems were unment and manpower shortages, to make their fullest contribution to the carrying of our heavy wartime traffic, the great burden of the task was placed upon our railroads. You are all familiar acco with the situation. The Federal sels. Government requisitioned the airairships. Maritime workers, along with their ships and barges, were required for military purposes is taken from the Lakes and canals to duty elsewhere. Shortages of chapters of the nation's war progasoline, tires or automotive parts duction effort. Here, great progall had their effect upon war-time traffic problems. However, and with all the changes and restrictions and shortages, our transportation systems, particularly the railroads, carried the unusually heavy load of traffic arising on the Great Lakes throughout the

At times they piled up so much

ping interests on our Great Lakes traffic along our ocean ports that cargo ships were unable to carry the goods away, with the result that new storage depots and holding points had to be established to store freight while it was held up awaiting shipping facilities. If our canal system had the ships and the manpower it could have carried 50% more traffic than it did. If our highway systems had the material, the equipment and the manpower they too would have taken some of the traffic carried by the rail lines. If we had the airlines and the plants to produce more airships, the railroads' task would have been lightened considerably.

Transportation Improvements

Today, conditions are vastly different. The remarkable advances made in science and in engineering have made it possible for each system of transportation to carry an ever-increasing volume of freight and passenger traffic. The railroads, with modern lightweight equipment, with diesel electric or steam turbines or electric locomotives, can haul from 20 to 30% more traffic than was the case before the war. Our airlines are expanding rapidly throughout the State and throughout the globe. New lines and additional schedules are being added at brief intervals to the existing system. Experts have predicted that there will be 500,000 planes of all types in the air within the next 10 years. The Federal Government constructed thousands of airports during the war and they have already authorized the expenditure of billions of dollars on new airports to be constructed as rap-

The volume of freight, of express, of mail and of passengers that will travel by air will increase amazingly and continuously with each succeeding month. For the most part these lines, whether they be intra-state, inter-state or international, radiate out of the great international metropolis of the world, the city of New York.

The highway system with magnificent thru-ways, as well as four and even six-lane freight and passenger highways, will become a reality in the very near

New modern palatial passenger buses are being manufactured. Strong, powerful lightweight trucks are on the assembly lines and here again the Federal and the State Governments have appropriated billions of dollars for the construction of highways throughout the country. highways will compete every other system in these postwar days for their full share of the load.

New York, of all the States, preserved its waterways. In fact, we even expanded and enlarged our canal system until today radiating out of New York we have a barge canal system connecting New York with Oswego on Lake Ontario and with Buffalo on Lake Erie. In addition, we have a canal system in operation between Albany and Montreal. From New York to Albany the system is a seaway capable of accommodating ocean-going ves-

The advances in the development of ships of all types urgently one of the most constructive ress is evident. Amphibious boats, landing craft and small sea-going cargo ships are to revolutionize shipping on our inland rivers and canals. Ships to carry cargo from Great Lakes cities to the Atlantic Seaboard ports, to Gulf ports, and even to foreign ports, are a reality now. These ships will very

(Continued on page 1142)

Objections to St. Lawrence Seaway

(Continued from page 1141)

readily navigate the waters of the solute dependence upon our railthe Hudson River. Experts tell us that the LST type of landing craft will take on and deliver cargo, including truck trailers, with or without the convenience of docks and port facilities. This type of ship will reactivate our canal system and increase its carrying capacity tremendously. Amphibious craft, we are told, will save time and costs where bridges and ferries and long-distance runs are required under present-day conditions.

Proposals have already been made by an Albany transportation company for the purchase of surplus ships of these types. The Ford Motor Corporation is already equipped with cargo carriers capable of navigating the Lakes, the canals and the Atlantic Seaboard. Engineers employed in the designing of small ships tell us that we are on the threshold of the greatest advance in this field of transportation.

Existing Transportation Capacity Doubled

With all these improvements in rail, air, land and water transthe coming of this intensified competition, with bigger power units and lighter though stronger equipment, transportation costs will come down and all the trafbe carried to the sea, most of it speedily, more economically, than carried without that seasonal interruption that will close the St. comes and we lay up part of our inland fleet and use the rest perhaps in the Hudson, in the Sound, and in the coastwise trade, our rail, air, and highway systems, financially sound and with modern equipment, will carry the winter's traffic from the West into the great Port of New York without difficulty.

There are, therefore, two thoughts that I would like to leave with you. One is the question of the character and the nature of the competition the seaway will give to these existing systems that now carry the traffic. The other is this-is it necessary for us, under present-day conditions, to bring in that outside competition or would it be better for us to give full play and encouragement to vast expansion and improvement in the systems that proximately \$20,000,000) and posnow serve our community and our State.

Position of Railways

The Federal Government has Switzerland to Britain. already authorized the expenditure of billions of our taxpayers' dollars for improvements in our airways, our highways and our waterways all of which will waterways—all of which will not only add immensely to our traffic-carrying capacity, but will likewise present a problem for our own railroads to meet.

During the war, great reliance was placed upon the railroads of they have been under the necesthe country and they carried to sity of paying gold for Swiss the ports of embarkation our fighting men, their equipment and their material. Without the railroads, we are told by our military leaders, we could not have won the war.

The strain under which the railroads labored left their equipment and the roadbeds in need them. While doing so they must continue to pay huge sums in taxes to our State, our cities, and to every tiny hamlet through which they run.

With the realization of our ab- cords.

Great Lakes, the Barge Canal and roads in time of national emergency, we must maintain them, either through profitable operations or by means of government subsidy. If the cream of the summer's traffic is taken from them and routed through the St. Lawrence, they will be left with the expensive traffic of the winter season when the St. Lawrence is frozen over. If the tramp steamers of other nations are to bring into our Great Lakes ports, British and Russian coal as ballast, then no longer will railroads haul the profitable trainloads of coal from our mines to Great Lakes ports. If the seaway carries the remarkable tonnage its advocates prophesy for it, then the railroads along with the waterways and the highways of our State will suffer from this new competition. If the high standards that characterize employment on our systems were at stake, the competition would not prove as threatening as it does. The compensating prophesies of the enthusiastic advocates of the seaway, which include the building of a great industrial empire along the banks portation we will double our of the St. Lawrence, might be transportation carrying capacity considered, if it were not for the within the next few years. With closed down for five months of the year, that we already have a surplus of shipping and that science and engineering are about to give us new materials and new fic from the Great Lakes area will equipment that will modify the practices of the past. There may to the Port of New York, more come a time in the future when engineering experts will be able ever before. It will likewise be to justify the seaway, but at this critical juncture of our history, in these hopeful days of recon-Lawrence solidly for five months in every year. When winter plans, new systems to promote and apply, I cannot give my support to the seaway proposal in pending measure.

Anglo-Swiss Credit Accord

Announcement that a payments agreement between Great Britain and Switzerland, negotiated in Berne, has been referred to the two Governments for approval was made on Feb. 16 by the Foreign Office at London, according to a wireless London message to the New York "Times" which went on to say:

The agreement will establish conditions for payments between Switzerland and the sterling area.

It is believed here that the agreement also contains mutual grants of credit of £5,000,000 (apsibly a Swiss franc additional credit equivalent to £10,000,000 (approximately \$40,000,000) by

The British have been extremely anxious to reach an understanding with the Swiss because francs needed for expenditures in that "hard money" country. The Swiss have been unwilling to accept sterling unless it was gold convertible.

The chief British pressure on the Swiss to obtain the loosening of repairs. They must rebuild of Swiss terms has been the refustheir plant at great expense to al to authorize British tourists to obtain Swiss francs.

The agreement, in general, follows the pattern of Anglo-Belgian and Anglo-Swedish payments ac-

The State of Trade

steel maker uses as raw material for turning out finished steel

products.

If the advance on semi-finished steel were to be too great in relation to the advance on finished steel products, the nonintegrated maker would be in such a squeeze that the general price increase would place him in a worse position than he was before the strike because of the 181/2c an hour wage increase. While the steel industry and the OPA finally reached an agreement on the amount of the average increase in steel prices there was at mid-week no evidence that the allocation of the \$5 a ton advance would be a simple matter.

The OPA is heading into one of its most active periods since practically all steel processors and fabricators will be forced to ask for price relief in order to take care of increased steel prices and increased wages, the magazine notes. Many of these plants, it is feared, may have to remain shutdown until final steel price announcements are made and until some assurance is given that those companies outside of the basic steel industry will be given speedy consideration by the OPA.

One thing seemed certain the past week unless some form of government priority control is instituted (and it can only be considered an outside possibility) most steel mills will be faced with the necessity of sharply reducing future customer tonnage quotas. Already behind schedule, a month or more on some products before the strike, and with a month's production lost during the strike and the possibility of losing more time as mills resume production, the "Iron Age" adds, some firm may have to set aside a full calendar quarter in which to catch up.

Philip Murray has definitely stated that the union has re-emphasized its agreement with the objective of increased productivi-tyy. He also says that since the contracts run for a full year, uninterrupted steel production will be

Because of the confusion and the inability of some firms to determine how long it will take to get into steel production, steel ingot output the past week was tentatively estimated at 25% of rated capacity, up 191/2 points from the previous week's rate. Despite the pessimism of steel producers in many areas concerning the return to pre-strike operating rates, recovery likely will be speedy. Major drawback to a most rapid return in some areas is the shortage of maintenance men, especially bricklayers.

The American Iron and Steel Institute announced on Tuesday of this week the operating rate of steel companies having 94% of the steel capacity of the industry will be 58.6% of capacity for the week ago. This represents an increase of 43.4 points or 200 43.4 points or 285.4% over that of the previous week.

This week's operating rate is equivalent to 1,032,800 tons of steel ingots and castings and compares with 268,000 tons one week ago, 104,400 tons one months ago and 1,732,700 tons one year ago.

Electric Production-The Edison Electric Institute reports that the output of electricity increased to 3,948,620,000 kwh. in the week ended Feb. 16, 1946, from 3,983,-493,000 kwh. in the preceding week. Output for the week ended Feb. 16, 1946, however, was 11.7% below that for the corresponding weekly period one year ago.

Consolidated Edison Co. of New York reports System output of 180.500,000 kwh. in the week ended Feb. 17, 1946, comparing with 184,200,000 kwh. for the corresponding week of 1945, or a bullish influences. The fact that peak. Other fruits were generally decrease of 2.0%. Local distribumost future grain contracts are limited with the supply of apples

(Continued from page 1135) which the small non-integrated tion of electricity amounted to 178,200,000 kwh., compared with 176,100,000 kwh. for the corresponding week of last year, an increase of 1.2%.

> Railroad Freight Loadings -Carloadings of revenue freight for the week ended Feb. 16, 1946, totaled 707,054 cars, the Association of American Railroads announced. This was a decrease of 6,186 cars (or 0.9%) below the preceding week and 77,649 cars, or 9.9% below the corresponding week of 1945. Compared with the similar period of 1944, a decrease of 67,183 cars, or 8.7%, is shown.

> Railroad Earnings in January-Based on advance reports from 88 class I railroads, whose revenues represent 80.8% of total operating revenues, the Association of American Railroads today estimated that railroad operating revenues in January, 1946, decreased 15.3% under the same month of 1945. This estimate, it was pointed out, covers only operating revenues and does not touch upon the trends in operating expenses. taxes, or final income results.

> Estimated freight revenues in January, 1946, were less than in January, 1945, by 19.1%, while estimated passenger revenues decreased 2.1%.

Paper and Paperboard Production — Paper production in the United States for the week ending Feb. 16 was 95% of mill capacity against 99.7% in the preceding week and 91% in the like 1945 week, according to the American Paper & Pulp Association. Paperboard output for the current week was 94%, compared with 97% in the preceding week and 93% in the like 1945 week.

Business Failures Lower-Continuing to decline for the third consecutive week. commercial and industrial failures in the week ending Feb. 21 were at the lowest level in more than a month. Dun & Bradstreet, Inc., reports 18 concerns failing as compared with 25 in the previous week and 14 in the corresponding week of 1945. Despite the decline failures continued for the sixth straight week to exceed those occurring in the same week a year ago.

Most of the week's decrease came in large failures involving liabilities of \$5,000 or more. They dropped from 19 last week to 13 in the week just ended, but were twice as high as in the comparable week of 1945 when there were only 6. On the other hand, concerns failing with small losses varied only slightly, numbering 5 against 6 a week ago and 8 last

In manufacturing and commercial service, failures fell off sharply this week. Construction was the only trade or industry group to show an increase-concerns failing in this line were up from none in the previous week to 5 in the week just ended. Compared with the corresponding week of 1945, on the other hand, failures were more numerous in cept retailing.

Three Canadian failures were reported as compared with none in the previous week and in the corresponding week of 1945.

Wholesale Commodity Price Index - Irregular movements during the week left the daily wholesale commodity price index, compiled by Dun & Bradstreet, Inc., at 184.12 on Feb. 19, after touching a new post-war high of 184.70 last Thursday. The current figure compares with 184.52 a week ago, and shows a rise of 4.5% over the 176.11 recorded a year ago.

Trading in grains declined sharply last week, partly due to the holiday. Rye continued to lead in sales activity. Inflation possibilities and the anticipation of higher ceiling prices were strong ple supply as the season neared its

currently selling at ceiling limits acted as a distinct curb to sales.

Reports from the new winter wheat crop were spotty. Wheat receipts continued below trade expectations. Shipments increased somewhat but there was still a shortage of box cars despite strenuous efforts of the railroads to relieve the situation. Demand for white flour increased sharply but new business came to a practical halt as millers and bakers studied the new drastic regulations increasing the extraction of flour from a bushel of wheat, which will become effective on March 1; Hog receipts remained heavy but good demand held prices at ceil-

Under persistent demand cotton values continued to gain last week, reaching new high levels for about 22 years. Bolstering in-fluences included the generally current inflationary trends, expectations of improvement in domestic consumption and exports, the gradual settling of strikes, and the President's announcement of a new wage-price policy. There was a feeling of caution at times, however, due to the possibility of a ceiling being placed on raw cotton and to the Government's announced plan to sell about 800,000 bales of cotton in March at a price considerably below the prevailing market.

Sales and allocations of cotton under Government control were reported at 803,000 bales during the month of January. In the week ended Feb. 9, registrations under the export sales program amounted to 39,955 bales, bringing the total to date to 291,761 bales. Cotton goods producers, awaiting OPA price action, have virtually withdrawn cotton gray cloth from the

In the Boston market, domestic wools continued slow last week but there appeared to be more inquiries in anticipation of shortages in foreign grades. Fine foreign wools continued in demand with trading irregular due to spotty supply conditions. Offerings from South Africa improved during the week resulting in increased purchasing, but there were continued delays reported in allocations on orders placed in Australia. Strike conditions in the New England area were said to be hampering the movement of wool to mills. Imports of apparel wools, scoured basis, for October and the first ten months of last year, as estimated by the Exchange Service Bureau, reached all-time highs of 62,475,-000 and 382,069,000 pounds, respectively. In men's wear piece goods markets, the resumption of Saturday work by some mills will be helpful in efforts to prevent further lag in shipments.

Wholesale Food Price Index Unchanged—Negligible changes in commodity prices were counterbalanced, leaving the wholesale food price index, compiled by Dun & Bradstreet, Inc., for Feb. 19, at last week's level of \$4.13. Compared with the \$4.10 for last year, this marks a fractional gain of 0.7%, whereas it is 2.5% over the 1944 figure of \$4.03. Gains in prices were recorded for rye and eggs, while declines occurred in potatoes, steers, sheep and lambs. The index represents the sum

foods in general use. Wholesale and Retail Trade-Retail sales volume for the country at large continued to rise during the week and was well above that of the corresponding week of a year ago, reports Dun & Bradstreet, Inc., in its weekly survey of trade. Limited selections presented one of the principal obstacles to shop-pers. Staples continued to be in high demand; buying was brisk in foods, Spring apparel, and home furnishings.

total of the price per pound of 31

The supply of meat and poultry became more plentiful and that of fresh vegetables generally was adequate. Citrus fruits were in ampeak. Other fruits were generally scarce. Butter, sugar, and onions continued to be the foremost items among current shortages in the

The demand for spring suits and coats increased generally this week while sales of spring furs were few. Interest in taffeta evening wear was sustained at a high level. The demand for women's winter apparel appeared to be diminishing as interest in spring and summer clothes mounted. The shortages that prevailed in men's clothing and women's hosiery continued to be acute. Most accessories and costume jewelry sold well; metal compacts have appeared in large quantity and are reported to be in great demand.

Medium and low-priced furniture this week was offered more readily than during the previous week with the supply of livingroom suites continuing very limited. Despite limited selections. drapery and curtain departments reported that sales volume was holding at high levels. Piece goods, sheets, and towels remained in demand as consumers sought staple household items. Some new housewares and appliances appeared in stores in small quantities. China and glass stocks were reported to be low in many areas.

Retail volume for the country was estimated at from 10 to 14% above the corresponding week a year ago. Regional percentage increases were: New England 8 to 12, East 14 to 17, Midwest 5 to 8, Northwest 9 to 13, South 10 to 14, Southwest 7 to 11, and Pacific Coast 11 to 15.

The volume of business in the wholesale markets this week continued close to last week's high figure and was moderately above that for the corresponding week a year ago. Trading in staple goods was steady although wholesale trading in general was spotty. Deliveries were slow and inventories remained limited in most lines.

Department store sales on a country-wide basis, as taken from the Federal Reserve Board's index for the week ended Feb. 16, 1946. increased by 19% above the same period of last year. In the past week sales in the city of Philadelphia were reduced because of a curtailment in public transportation service on Feb. 11 and 12 those in the city of New York were reduced because of the closing of all business establishments on Feb. 12 to avoid a fuel shortage, and those in Pittsburgh were reduced because stores were closed on Feb. 12 owing to a power shortage. This compared with an increase of 25% in the preceding week. For the four weeks ended Feb. 16, 1946, sales increased by 20% and for the year to date by

The dollar volume of retail sales in New York the previous week showed heavy increases with estimates placing the gain for department stores at about 35% above the similar week of 1945. It is worthy to note that Washington's Birthday fell on Friday of last week, instead of on Thursday as was the case a year ago, thus tending to increase the amount of L the advance owing to concentration of shopping normal for a Thursday.

Deliveries continued under great pressure in local wholesale markets and proved to be a feature. Supply conditions were tight, while food volume at both the age of 76 years. wholesale and retail remained steady.

According to the Federal Reserve Bank's index, department store sales in New York City for the weekly period to Feb. 16. 1946, increased 18% above the same period last year. This compared with an increase of 36% (revised figure) in the preceding week. For the four weeks ended Feb. 16, 1946, sales rose by 27% and for the year to date by 22%.

Wholesale Prices Rose 0.1% in Week **Ended February 16, Labor Dep't Reports**

"Average primary market prices rose slightly (0.1%) during the week ended Feb. 16, 1946, largely as the result of higher prices for agricultural commodities," the Bureau of Labor Statistics, U. S. Department of Labor reported on Feb. 21. At 107.2% of the 1926 average, a new post-war high, the index was 0.5% above mid-January 1946, and 2.1% above the corresponding week of 1945, said the Bureau, which further stated:

Farm Products and Foods — Average market prices for farm products rose 0.5% to a level 1.3% above a month ago and 3.0% above mid-February of last year. Higher prices for fruits and vegetables and eggs during the week more than offset fractional declines for grains and poultry. Quotations for eggs advanced following announcement of governmental price support policies. Prices for apples moved up seasonally, and higher prices for oranges reflected the predominance of better quality fruit on the market. Lemons declined seasonally, and old crop potatoes were quoted lower in eastern markets. Cotton quotations rose to a 20 year high on speculative buying. Warehouse prices for tobacco moved down, with sharply lower quotations for burley reflecting a large crop. The generally lower spot prices for grains were a reflection of weakness in futures markets following the President's announcement of higher flour extraction requirements, to provide more wheat for foreign relief. Poultry prices were down with large supplies and weak demand following the holiday. Sheep quotations moved up seasonally, with the rise for lambs limited by payment of increased subsidies to producers.

The higher prices for fruits and vegetables and eggs were largely

responsible for the advance of 0.8% in the group index for foods. In addition, quotations for raw sugar moved up about 12% under higher ceilings allowed by OPA. The price advance for raw sugar will not be reflected in refined sugar prices until the higher priced raw sugar is refined and sold. Prices for canned baked beans rose fractionally with the introduction of quotations on a smaller size can resulting in a higher price per ounce for baked beans, under existing OPA ceilings. Prices for lower grades of wheat flour moved to ceiling with heavy demand following the President's announcement of restrictions on white flour.

Other Commodities. There were few price changes for non-agricultural commodities during the week. Prices for brick, cement and Southern pine lumber again rose fractionally as additional producers moved quotations to higher ceilings allowed by OPA in preceding months. Quotations for boxboard advanced under ceiling adjustments previously allowed. Some types of leathers moved up fractionally with ceiling adjustments granted by OPA to individual manufacturers

The Labor Department included the following notation in its

The Bureau of Labor Statistics wholesale price data, for the most part, represent prices in primary markets. In general, the prices are those charged by manufacturers or producers or are those prevailing on commodity exchanges. The weekly index is calculated from one-day-a-week prices. It is designed as an indicator of weekto-week changes and should not be compared directly with the

The following tables show (1) indexes for the past three weeks, for Jan. 19, 1946 and Feb. 16, 1945, and (2) percentage changes in subgroup indexes from Feb. 9, 1946 to Feb. 16, 1946.

Death of Carl Snyder Carl Snyder, author and nation-

ally known economist, died at Santa Barbara, Cal. on Feb. 16 at

He had been ill for three years. Advices from Santa Barbara Feb. 16 published in the New York 'Sun" stated:

From 1920 to 1935 he was general statistician for the New York Federal Reserve Bank, where he also organized a research department. He had lived in semi-retirement since coming here for his

health some three years ago.
Mr. Snyder's best known book Creator," published in 1940. Other works included "New Conceptions the American Association for the in Science," "The New World Ma- Advancement of Science."

chine," "American Railways as Investments," "Business Cycles and Business Measurements.'

He was born in Cedar Falls, Iowa, and educated at Iowa State University. Later he entered newspaper work, becoming an editorial writer for the "Washington Post" and a financial writer for the New York "Tribune."

Mr. Snyder was a former president of the American Statistical Association and a fellow of the American Association for the Advancement of Science, and the American Academy of Arts and Letters. In 1934 he was elected was entitled "Capitalism and the Chairman of the social service science and economic section of

Federal Reserve December Business Indexes

The Board of Governors of the Federal Reserve System issued on Jan. 26 its monthly indexes of industrial production, factory employment and payrolls, etc. At the same time, the Board made available its customary summary of business conditions. The indexes for December, together with comparison for a month and a year ago follow:

BUSINESS INDEXES

1939 average = 100 for factory employment and payrolls; 1923-25 average = 100 for construction contracts; 1935-39 average = 100 for all other series

*Preliminary. Data not vet available.

Note—Production, carloading, and department store sales indexes based on daily averages. To convert durable manufactures, nondurable manufactures, and minerals indexes to points in total index, shown in Federal Reserve Chart Book, multiply turable by .379, nondurable by .469, and minerals by .152.

Construction contract indexes based on 3-month moving averages, centered at second month, of F. W. Dodge data for 37 Eastern States. To convert indexes to value figures, shown in the Federal Reserve Chart Book, multiply total by \$410,269,000, residential by \$184,137,000, and all other by \$226,132,000.

Employment index, without seasonal adjustment, and payrolls index compiled by Bureau of Labor Statistics.

Weekly Coal and Coke Production Statistics

The total production of soft coal in the week ended Feb. 16, 1946, as estimated by the United States Bureau of Mines, amounted to 12,-180,000 net tons, a decrease of 320,000 tons, or 2.6%, from the preceding week. Output in the corresponding week of 1945 totaled 11,585,-000 tons. From Jan. 1, to Feb. 16, 1946, soft coal production amounted to 82,879,000 net tons, an increase of 1.7% when compared with the 81,520,000 tons produced from Jan. 1 to Feb. 17, 1945.

Production of Pennsylvania anthracite for the week ended Feb. 16, 1946, as estimated by the Bureau of Mines, was 1,236,000 tons, an increase of 71,000 tons (6.1%) over the preceding week. pared with the output in the corresponding week of 1945 there was an increase of 97,000 tons, or 8.5%. The calendar year to date shows an increase of 12.7% when compared with the corresponding period of 1945.

The Bureau also reported that the estimated production of beehive coke in the United States for the week ended Feb. 16, 1946, showed a decrease of 14,000 tons when compared with the output for the week ended Feb. 9, 1946; and was 26,200 tons less than for the corresponding week of 1945.

Electric Output for Week Ended Feb. 23, 1946 12.3% Below That for Same Week a Year Ago

The Edison Electric Institute, in its current weekly report, estimated that the production of electricity by the electric light and power industry of the United States for the week ended Feb. 23, 1946, was 3,922,796,000 kwh., which compares with 4,473,962,000 kwh. in the corresponding week a year ago, and 3,948,620,00 kwh. in the week ended Feb. 16, 1946. The output for the week ended Feb. 23, 1946 was 12.3% below that of the same week in 1945.

These prices are computed from average yields on the basis of one "typical" bond 34% coupon, maturing in 25 years) and do not purport to show either the average level or the average movement of actual price quotations. They merely serve to Mustrate in a more comprehensive way the relative levels and the relative movement of yield averages, the latter being the true picture of the bond market.

NOTE The list used in compiling the averages was given in the Nov. 22, 1945 tasue of the "Chronicle" on page 2508.

President Concerned Over Wheat Shortage

Expressing concern over what appeared to be a world-wide shortage of wheat and vitally needed supplies abroad, President Truman on Jan. 25 proposed calling on the principal wheat-producing countries to make up a 5,000,000-ton shortage in shipments to deficit areas during the first half of 1946, special Washington advices to the New York "Times" stated. The Department same date that stocks of wheat held in storage in all positions, on and off farms on Jan. 1 were 689,-000,000 bushels. It was added:

Stocks held in all positions a year ago totaled 835,000,000 bush-

The Department said that the disappearance of wheat since July 1 had been relatively rapid, with smaller stocks in the various storage positions Jan. 1 than in any of the previous four years. Government-owned stocks held by the Commodities Credit Corporation totaled only about 15,000,-000 bushels.

Following a White House conference with Secretary of State issued a directive to the Secre-1,538,452 1,702,570 tion calling attention to his pledge equitable basis."

after the Potsdam conference that this country would feed Europe's hungry to the extent of its ability and added:

"I should like to emphasize the last sentence of that statement and request that you give the personal attention to this problem which the seriousness of the situation demands."

The President followed this up with the reminder that Director John W. Snyder of the Office of War Mobilization and Reconversion, acting on his instructions, had set up a Movement Coordinatof Agriculture estimated on the ing Committee of representatives of the departments and agencies the directive with the request that he be kept advised of progress, and of any major difficulties not readily adjustable.

In his directive the President

"I have become increasingly concerned over the shortages of vitally needed supplies to liberated countries. I am particularly alarmed at what now appears to be a world-wide shortage of wheat. I am informed that many of the countries of Europe now possess less wheat than is necessary to maintain distribution, even though their bread ration is down to a starvation level.

Byrnes, it was added in the "In view of this situation, this "Times" advices: The President Government is recommending that each of the supplying countaries of State, War, Navy, Agritries accept its proportionate culture and Labor, the War Shipshare of the responsibility in ping Administrator and the meeting the urgent requirements Director of Defense Transporta- of the liberated countries on an

Reports Applications For Dwelling Units

Applications covering an additional 19,427 dwelling units were received by the field offices of the Federal Housing Administration during the week from Jan. 22 through Jan. 29 under the veterans' housing priorities system, FHA Commissioner Raymond M. Foley announced on Feb. 1. This makes total applications covering 38,191 units which have been received since the new system, aimed at expediting construction of moderate-cost housing for veterans, went into effect on Jan. 15. The FHA further said:

Of the applications received to date 44% have been for sales prices of less than \$7,500 or rentals of less than \$60 a month. The top permissible sales price is \$10,000, including land and improvements, and the top monthly rental permitted is \$80 a month. Under the new system the Civilian Produc-tion Administration has delegated to the FHA, through the National Housing Agency, the authority to process applications for and issue HH preference ratings for 11 items of building material now in critically short supply. Applicants must agree to hold the accommodations for sale or rental to veterans during the course of con-struction and for 30 days thereafter.

Commissioner Foley said it still was too early to reach any definite conclusion as to whether the price distribution of the applications throughout the country is satisfactory. He has urged FHA field offices to exert every effort among home builders to induce the production of housing at price levels as much below the maximum as feasible.

The present priority system is designed to speed construction through channelling into the hands of home builders the necessary scarce materials to produce between 400,000 and 500,000 moderate priced houses in 1946.

Restrict Wheat Trades

Following similar action by the Minneapolis and Kansas City exchanges, directors of the Chicago Board of Trade ordered on Feb. 19, according to special advices from Chicago to the New York "Times", that trading in May wheat contracts, effective Feb. 20, be restricted to the liquidation of outstanding contracts. Also effective Feb. 20, according to the Times", the board changed margin requirements, initial margins to be 10 cents a bushel on wheat, barley, corn and oats; 25 cents on soy beans and 35 cents on rye. The advices added: "Such margins must be maintained on the following bases: Oats, 8 cents a bushel; wheat, barley and corn, 10 cents; soy beans, 16 cents; and rye, 25

"Speculators cannot take a delivery of cash wheat on May contracts in leading markets, according to brokers who have studied the Government wheat conservation program, and assert that the order gives the closest control over wheat that has ever been taken. Millers and feed manufacturers say they are still uncertain about some provisions of the order."

Trading on New York Exchanges

The Securities and Exchange Commission made public on Feb. 20 figures showing the volume of total round-lot stock sales on the New York Stock Exchange and the New York Curb Exchange and the volume of round-lot stock transactions for the account of all members of these exchanges in the week ended Feb. 2, continuing a series of current figures being published weekly by the Commission. Short sales are shown separately from other sales in these figures.

Trading on the Stock Exchange for the account of members (except odd-lot dealers) during the week ended Feb. 2 (in round-lot transactions) totaled 4,392,181 shares, which amount was 14.79% of the total transactions on the Exchange of 14,845,670 shares. This compares with member trading during the week ended Jan. 26 of 3,401,203 shares, or 14.33% of the total trading of 11,873,690 shares.

On the New York Curb Exchange, member trading during the week ended Feb. 2, amounted to 1,692,270 shares, or 13.04% of the total volume on that Exchange of 6,487,675 shares. During the week ended Jan. 26 trading for the account of Curb members of 1,071,760 shares was 13.16% of the total trading of 4,073,445 shares.

firms and their partners, including special partners.

†In calculating these percentages the total of members' purchases and sales is compared with twice the total round-lot volume on the Exchange for the reason that the Exchange volume includes only sales.

†Round-lot short sales which are exempted from restriction by the Commission's rules are included with "other sales."

§Sales marked "short exempt" are included with "other sales."

National Fertilizer Association Commodity Price Index Remains Steady

The weekly wholesale commodity price index compiled by The National Fertilizer Association and made public on Feb. 25, for the week ended Feb. 23, 1946, remained at the same level as that of the preceding week, 142.1. A month ago the index stood at 141.8, and a year ago at 139.8, all based on the 1935-1939 average as 100. The Association's report went on to say:

During the latest week the advances registered in three of the composite groups of the index were offset by a decline in one of the composite groups of the index were offset by a decline in one of the more heavily weighted groups. The farm products group declined slightly. The cotton subgroup continued its advance. The grain index showed a small increase because of higher rye quotations. The livestock index declined moderately with lower prices for cattle, lambs, sheep and live poultry. The textile index advanced fractionally. The building material index rose substantially because of higher prices for oak flooring. The chemical and drug index was slightly higher due to an increase in castor oil prices. The price for turned to work at several mines, finished steel advanced fractionally but the rise was not sufficient and the Monterrey refinery, to change the metal index. The small decline in potato prices was closed since the beginning of the

not enough to affect the food index. All other groups of the index remained unchanged

During the week 6 price series in the index declined and 5 advanced; in the preceding week 3 declined and 7 advanced; in the second preceding week 6 declined and 5 advanced.

Non-Ferrous Metals — Offerings of Copper and Lead Shrink on Strike Threats — Demand Active

"E. & M. J. Metal and Mineral Markets," in its issue of Feb. 21 stated: "Any comfort that producers and consumers of non-ferrous metals might have gained from the settlement of the labor dispute in the steel industry was nullified last week by additional disturbing labor developments within their own industry. The International Union of Mine, Mill & Smelter Workers, CIO, voted to call a strike

on Feb. 25 in some 16 plants and mines of the American Smelting | year, resumed production Feb. 18 & Refining Co. [This strike materialized on Feb. 25 and was 100% effective, involving some 7,000 workers, according to an Associated Press dispatch.] Work stoppage would further restrict the supply of both copper and lead, and sellers last week limited offerings of these metals pending further developments. Bills were introduced in Congress to extend price controls and the Premium Price Plan for another year." The publication further went on to say in part as follows:

Copper

Strikes and additional work stoppages that are likely to occur in the next week restricted new business in copper, even though the demand for the metal remains quite active. Should the refineries of A.S.&R. Co. shut down next week (see above), the problem of supplying consumers with metal in desired shapes will become complicated. The Metals Reserve undoubtedly will be called upon to furnish addditional cop-

The strike in the Utah area continues, and the refinery at Laurel Hill remains idle. The Hastings plant of Anaconda Wire & Cable closed down last week because of labor trouble.

Negotiations are in progress in reference to fixing terms for the sale of South American copper to the Government. With the free market for copper rising, the new price may be somewhat higher than that paid last year.

With the demand for lead active, inspired in part by a possible last week was in a highly nervous state. News from Washington that CPA will allow mine operators who started producing after Oct. 27, 1943, to become eligible for the same premium payments as old producers, effective Feb. 1 this year, will not bring out much additional metal, market authorities believe.

Consumers have asked for a large tonnage of foreign lead for March delivery, but it appears doubtful whether they will obtain even one-half of the quantity requested. February allotments of foreign lead by CPA were held down to around 14,000 tons.

The Mexican situation has improved somewhat. Workers re-

Lead sales for the week amounted to 6,461 tons.

Zinc

With galvanizing operations resuming, demand for Prime West-ern zinc increased last week. Call for Special High Grade continued at a lively rate, but grades that enter into the production of brass are moving slowly, owing to the strike situation at brass mills.

Cadmium

Electroplaters last week were urged to substitute other metals for cadmium to conserve shrinking supplies. At the recent meeting of the advisory group representing distributors, CPA officials said that demand for cadmium is absorbing the metal at the rate of about 9,000,000 lb. a year, or approximately 1,000,000 lb. in excess of estimated new supply. To meet the heavy demands of consumers, the Government has been drawing heavily on its stockpile. In 1940, production amounted to about 6,000,000 lb., with supply and demand virtually in balance. A return to prewar electroplating, involving a larger precentage of zinc and other more plentiful metals, is necessary, CPA holds. Before arriving at a defnite program for curtailing consumption, CPA officials are to meet with consumers in other fields, as bearings, pigments, etc.

Tin

Production of tin-plate in the United States in December totaled 194,678 tons, against 224,112 tons in December 1944. Production in 1945 was larger than in the preceding year, owing chiefly to furstoppage of work at smelters and ther gains in output of electrolytic refineries of A.S.&R., the market plate to conserve tin. Tin-plate production in 1944 and 1945, in tons, according to the American Iron and Steel Institute, follows: 1945 1944 1.968.894 Hot dipped ...

Electrolytic _____ 867,445 649,556 2.836.339 2.641.832 The supply situation in tin is improving slowly, but consumers

believe that some increase in con-

sumption will be permitted in the

third quarter of the year. Quotations in the domestic market remain unchanged. Forward metal was nominally as follows cents per pound:

| | and Lane Lane | | | |
|------|---------------|--------|--------|----------|
| | | Feb. | March | April |
| Feb. | 14 | 52.000 | 52.000 | 52.000 |
| Feb. | 15 | 52.000 | 52.000 | 52.000 |
| Feb. | 16 | 52.000 | 52.000 | 52.000 |

| Feb | 20 | 52 000 | 52 000 | - 52 000 |

at 51.125¢ per pound.

Quicksilver

The trade was interested in a report to the effect that the European producers had decided to merchandise metal for the present through the same agents as formerly. Spanish quicksilver was offered here on the basis of \$103

per flask, duty paid.

Demand for quicksilver last week was moderate, with quotations unchanged at \$103 to \$105 per flask, spot and nearby. On forward metal \$102 might be done, according to sellers. Some

export inquiry was noted.

The Bureau of Mines estimated consumption in December at 2,000 flasks, against 2,500 flasks in November. Domestic production of quicksilver in December was 1,-600 flasks, and imports amounted to 770 flasks.

Silver

Demand for silver remains active and the supply available is insufficient to cover the needs of consumers. The New York Official for foreign silver continued at 703/4¢ an ounce troy. London was unchanged at 44d.

Result of Treasury Bill Offering

The Secretary of the Treasury announced on Feb. 25 that the tenders for \$1,300,000,000 or thereabout of 92-day Treasury bills to be dated Feb. 28 and to mature May 31, which were offered on Feb. 21, were opened at the Federal Reserve Banks on Feb. 25.

Total applied for, \$2,005,866,000. Total accepted, \$1,316,466,000 (includes \$41,343,000 entered on a fixed price basis at 99.905 and accepted in full).

Average price, 99.904+; equivalent rate of discount approximately 0.375% per annum.

Range of accepted competitive bids: High, 99.908, equivalent rate of

discount approximately 0.360% per annum. Low, 99.504; equivalent rate of

discount approximately 0.376% per annum. (60% of the amount bid for at

the low price was accepted.) There was a maturity of a similar issue on bills on Feb. 28 in the amount of \$1,316,013,000.

NYSE Odd-Lot Trading

The Securities and Exchange Commission made public on Feb. 20, a summary for the week ended Feb. 9 of complete figures showing the daily volume of stock transactions for odd-lot account of all odd-lot dealers and specialists who handled odd lots on the New York Stock Exchange, continuing a series of current figures being published by the Commission. The figures are based upon reports filed with the Commission by the odd-lot dealers and spe-

Daily Average Crude Oil Production for Week Ended Feb. 16, 1946 Increased 19,450 Barrels

The American Petroleum Institute estimates that the daily average gross crude oil production for the week ended Feb. 16, 1946, was 4,709,950 barrels, an increase of 19,450 barrels per day over the preceding week and 279,950 barrels in excess of the daily average figure of 4,430,000 barrels estimated by the United States Bureau of Mines as the requirements for the month of February, 1946. The current figure, however, was 70,720 barrels per day less than the output in the week ended Feb. 17, 1945. Daily production for the four weeks ended Feb. 16, 1946 averaged 4,659,000 barrels. Further details as reported by the Institute follow:

Reports received from refining companies indicate that the industry as a whole ran to stills on a Bureau of Mines basis approximately 4,643,000 barrels of crude oil daily and produced 14,002,000 barrels of gasoline; 2,285,000 barrels of kerosine; 5,776,000 barrels of distillate fuel, and 8,813,000 barrels of residual fuel oil during the week ended Feb. 16, 1946; and had in storage at the end of that week 105,233,000 barrels of finished and unfinished gasoline; 8,436,000 barrels of kerosine; 27,273,000 barrels of distillate fuel, and 40,036,000 barrels of residual fuel oil.

Civil Engineering Construction Totals \$51,564,000 for Week

Civil engineering construction volume in continental United States totals \$51,564,000 for the week ending Feb. 21, 1946, as reported to "Engineering News-Record." This volume is 17% above This volume is 17% above the previous week, 216% above the week last year and 24% below the previous four-week moving average. The report issued on Feb. 21 went on to say:

Private construction this week, \$34,898,000, is 29% above last week and 268% above the week last year. Public construction, \$16,-666,000, is 2% below last week and 144% greater than the corresponding week of 1945. State and municipal construction records a 4% increase over last week and a 231% increase over the week last year. Federal construction is down 10% below last week's total but 66% greater than the 1945 week.

Total engineering construction for the eight-week cumulative period of 1946, \$499,426,000, is 153% greater than the \$197,709,000 recorded for the same period of 1945. On a cumulative basis, private construction in 1946 totals \$336,124,000, 452% above the 1945 period. The 51% drop in Federal work was not sufficient to offset the 338% increase in state and municipal construction, as public construction, \$163.302,000, rose 19% over the total for an eight-week period of 1945.

Civil engineering construction volume for the current week, last week and the 1945 week are:

| F | eb. 21, 1946 | Feb. 14, 1946 | Feb. 22, 1945 |
|--------------------------|--------------|---------------|---------------|
| Total U. S. construction | \$51,564,000 | \$44,058,000 | \$16,301,000 |
| Private construction | 34,898,000 | 27,115,000 | 9,482,000 |
| Public construction | 16,666,000 | 16,943,000 | 6,819,000 |
| State and municipal | 10,702,000 | 10,295,000 | 3,236,000 |
| Federal | 5,964,000 | 6,648,000 | 3,583,000 |

In the classified construction groups, five of the nine classes recorded gains during the current week over last week as follows: waterworks, commercial buildings, earthwork and drainage, highways and unclassified. Eight of the nine classes gained over the week last year as follows: waterworks, bridges, industrial buildings, commercial buildings, public buildings, earthwork and drainage, highways and unclassified.

New Capital

New capital for construction purposes this week totals \$5,966,000 and is made up of \$3,240,000 in state and municipal bond sales and \$2,726,000 in corporate security issues. New capital for the eightweek period in 1946 totals \$294,607,000, 50% greater than the \$196,-472,000 reported for the corresponding period of 1945.

Steel Operations Now at 58.6% of Capacity-**New List of Prices May Be Announced March 1**

Resuming operations at a much faster rate than had been expected, the steel industry this week was pondering over the threat of a coal strike in April, according to "The Iron Age," national metalworking paper. "Negotiations for higher wages in the mines are expected to be underway by Mar. 10 or shortly thereafter," states this publication in its issue of today (Feb. 28), which further adds:

Even though the steel industry was almost completely shutdown the coal tieup should last as long for more than four weeks because as three or four weeks. In any of the steel strike, the coal mines event a strong possibility of a owned by steel firms operated at a high level, but these supplies cannot be utilized to carry on steel output if a prolonged coal strike occurs.

Some steel companies made provisions to lay down the coal mined at their pits so as to have it on hand when steel operations were resumed, but by far the larger segment of the steel industry was unable to make such arrangements with the result that these badly needed coal supplies were diverted into commercial channels. The industry's largest operator made no agreements with the steel union to permit the stocking of coal from its mines and apparently also was unable to quickly make provisions for storage. Consequently almost 90% of the coal mined from this firm's properties found its way into commercial channels during the period of the steel strike.

John L. Lewis may wage demands will be made. It is expected in some circles that the United Mine Workers will attempt to keep its present takehome pay (which in many mines amounts to \$63.50 a week for six 9-hr days), the same for a 40-hr

Mr. Lewis in his opening address to the coal operators may demand an end to both wage and price controls and call for free collective bargaining. There is one thing certain, however, he will as in the past attempt to get a better bargain for his coal miners than Phil Murray obtained for steelworkers.

Many steel companies would be

prolonged tieup would force many steel companies to slowdown production as a safety measure against damage to coke ovens.

The OPA on Mar. 1 is expected to announce an entire new list of steel prices which will reflect the allocation among various products of the recent \$5 a ton average boost. Provision will be made to help eradicate the plight of the small nonintegrated maker so that the increase in semifinished steel will not be as great as the adjustment in finished items made by the nonintegrated mills.

Unless plans are greatly changed within the next few days semifinished steels such as sheet bars, billets, tube rounds, wire rods and skelp may be advanced \$3 a ton. Finished items with a few exceptions are expected to be raised \$5 a ton. In addition to the latter increase some products such as sheets, strip, nails, tubes and bars may be given a further boost coal operators in the latter part of in order to afford relief to the this week or next week that new nonintegrated makers who produce these products from semifinished steel purchased from the large companies.

Going ahead by leaps and bounds, the steel ingot rate made extensive gains this week. If the present rate of recovery continues output next week may be above 70% of capacity, a figure which would be far greater than steel officials believed could be obtained in so short a time.

The American Iron and Steel Institute on Monday of this week announced that telegraphic reports which it had received indiated that the operating rate of steel companies having 94% of the steel capacity of the industry forced to reduce steel output sub- will be 58.6% of capacity for the

year ago. This represents an increase of 43.4 points or 285.4% from the preceding week. The operating rate for the week beginning Feb. 25 is equivalent to 1,032,800 tons of steel ingots and castings, compared to 268,000 tons one week ago, 104,400 tons one month ago, and 1,732,700 tons one year ago.

"Steel" of Cleveland, in its summary of the iron and steel markets, on Feb. 25, stated in part as follows:

"While there has been increase in steel demand since end of the strike a week ago it is restricted. Many consuming plants still are closed because of lack of steel Also consumers before placing new tonnage, want to know not only the cost of steel products they require under the price schedule now being formulated, but also the markup on other materials and their own labor costs.

"A further deterrent is the fact that steel producers are discouraging placing of further orders until they have a clearer conception of how they can schedule it. Mills have been getting back into production slowly and some producers up to the end of last week had not signed new labor contracts.

"A number of consuming plants still idle are closed because of unsettled labor disputes, and these include some of the largest, such as are found in the electrical, automotive and railroad equipment industries. Despite resumption of steel operations the new government wage-price policy has not yet resulted in appreciable decline in strikes in most branches of the metalworking in-

"At the same time many plants are down either because of lack of steel, having exhausted inventories, or must close temporarily before mills can come to their rescue with further supply. Prediction is made by trade leaders of a further drop before improvement starts. Some large consumers assert it will be another two or three weeks before they will have sufficient steel to warrant resumption of operations. They and others are pressing for steel tonnage already on books.

"Various leading sellers, in attempting to set up schedules, estimate a loss of six weeks to two months because of the strike and difficulties in getting back to nor-mal, even more in the case of some products. Because of many requests for certain types and sizes of steel in which special shortages have developed during the strike, representing changes in original orders, mills are freezing schedules for several weeks, to obtain maximum output.

"Shipments now going forward are being billed on the basis of prices ruling prior to Feb. 15, with the provision that any increase in the price schdule new being set up will be added, in accordance with the new OPA ruling.'

Cost of Living Rose 0.4% in December

Living costs for the average family of wage earners and lowersalaried clerical workers in the United States increased 4.4% in December, repeating the rise in November, the National Industrial Conference Board reported recently. The Conference Board's cost of living index stood at 107.1 (1923=100) in December, compared with 106.7 in November. The index was 1.3% higher than in December, 1944. An increase of 0.9% in food costs, to a level 2.3% higher than in December, 1944, featured the rise in the cost of living. Other increased costs were 0.1% in men's clothing, 0.2% in sundries, and 0.2% in fuel and stantially if the coal strike should last for two weeks, while other firms would probably be hit if one month ago and 94.6% one 0.1%.

Revenue Freight Car Loadings During Week Ended Feb. 16, 1946 Decreased 6,186 Cars

Volume 163 Number 4468

Loading of revenue freight for the week ended Feb. 16, 1946 totaled 707,054 cars, the Association of American Railroads announced on Feb. 21. This was a decrease below the corresponding week of 1945 of 77,649 cars, or 9.9%, and a decrease below the same week in 1944 of 67,183 cars or 8.7%.

Loading of revenue freight for the week of Feb. 16, decreased 6,186 cars or 0.9% below the preceding week.

Miscellaneous freight loading totaled 287,430 cars, a decrease of 507 cars below the preceding week, and a decrease of 103,169 cars below the corresponding week in 1945.

Loading of merchandise less than carload lot freight totaled 118,-332 cars, a decrease of 1,920 cars below the preceding week, but an increase of 15,063 cars above the corresponding week in 1945.

increase of 15,063 cars above the corresponding week in 1945.

Coal loading amounted to 181,840 cars, a decrease of 4,326 cars below the preceding week, but an increase of 15,014 cars above the corresponding week in 1945.

Grain and grain products loading totaled 51,843 cars, an increase of 999 cars above the preceding week and an increase of 8,817 cars above the corresponding week in 1945. In the Western Districts alone, grain and grain products loading for the week of Feb. 16 totaled 34,366 cars, an increase of 1,714 cars above the preceding week and an increase of 7,175 cars above the corresponding week in 1945.

Livestock loading amounted to 18,080 cars, a decrease of 251 cars below the preceding week but an increase of 4,138 cars above the corresponding week in 1945. In the Western Districts alone loading of livestock for the week of Feb. 16 totaled 14,056 cars, a decrease of 83 cars below the preceding week, but an increase of 3,905 cars above the corresponding week in 1945.

Forest products loading totaled 36,318 cars, an increase of 730 cars above the preceding week, but a decrease of 3,449 cars below the corresponding week in 1945.

Ore loading amounted to 5,412 cars, a decrease of 466 cars below the preceding week and a decrease of 7,130 cars below the corresponding week in 1945.

Coke loading amounted to 7,799 cars, a decrease of 445 cars below the preceding week, and a decrease of 6,933 cars below the corresponding week in 1945.

All districts reported decreases compared with the corresponding week in 1945 except the Pocahontas, and all reported decreases compared with 1944, except the Pocahontas, Southern and Central west-

| 4 weeks of January | 1946 | 1945 | 1944 |

Weekly Statistics of Paperboard Industry

We give herewith latest figures received by us from the National Paperboard Association, Chicago, Ill., in relation to activity in the paperboard industry.

The members of this Association represent 83% of the total industry, and its program includes a statement each week from each member of the orders and production, and also a figure which indicates the activity of the mill based on the time operated. These figures are advanced to equal 100%, so that they represent the total industry.

STATISTICAL REPORTS-ORDERS, PRODUCTION, MILL ACTIVITY

Notes—Unfilled orders of the prior week, plus orders received, less production, do not necessarily equal the unfilled orders at the close Compensation for delinquent reports, orders made for or filled from stock, and other items made necessary adjustments of unfilled orders

NYSE Short Interest To Feb. 15 Reported

The New York Stock Exchange made public on Feb. 20 the following:

The short interest as of the close of business on the Feb. 15, 1946 settlement date, as compiled from information obtained by the New York Stock Exchange from its members and member firms, was 1,181,222 shares, compared with 1,270,098 shares on Jan. 15, 1946, both totals excluding short positions carried in the odd-lot accounts of all odd-lot dealers. As of the Feb. 15, 1946 settlement date, the total short interest in all odd-lot dealers' accounts was 73,359 shares, compared with 50,207 shares on Jan. 15, 1946.

The Exchange report added:
Of the 1,276 individual stock
issues listed on the Exchange on
Feb. 15, 1946, there were 73 issues
in which a short interest of 5,000
or more shares existed, or in
which a change in the short position of 2,000 or more shares occurred during the month.

The following table compiled by us shows the amount of short interest during the past year:

Freight Traffic in Jan. Exceeded Total in Dec.

The volume of freight traffic handled by Class I railroads in Jan. 1946, measured in ton-miles offreight, decreased 14% under the corresponding month of last year, the Association of American Railroads announced on Feb. 23. Traffic in January amounted to approximately 49,000,000,000 ton-miles, according to preliminary estimates based on reports received by the Association from Class I railroads.

The January freight traffic was 19% less than the same month two years ago, but was very nearly double that of 1939.

The following table summarizes revised statistics for the year 1945, and preliminary figures for January, 1946 (000 omitted):

| 11 mos. actual Mo. of Dec | | | | |

Lumber Movement—Week Ended February 16, 1946

According to the National Lumber Manufacturers Association, lumber shipments of 421 mills reporting to the National Lumber Trade Barometer were 3.7% above production for the week ending Feb. 16, 1946. In the same week new orders of these mills were 8.6% below production. Unfilled order files of the reporting mills amounted to 87% of stocks. For reporting softwood mills, unfilled orders are equivalent to 32 days' production at the current rate, and gross stocks are equivalent to 36 days' production.

For the year-to-date, shipments of reporting identical mills exceeded production by 10.3%; orders by 13.6%.

Compared to the average corresponding week of 1935-1939, production of reporting mills was 4.2% below; shipments were 14.3% below; orders were 24.1% below.

Items About Banks, **Trust Companies**

The main London office of non-depositors Guaranty Trust Company of New York, which has been in temporary quarters for more than five ears due to bomb damage, moved back on Feb. 25 to renovated premises at its former location, 32 Lombard Street, E. C. 3. The interior of the building had been demolished in November, 1940, by a direct bomb hit. Fortunately it is announced this was not followed by fire and resulted in no casualties. Pending the availability of labor and materials for reconstruction, the office conducted its operations during the remain-der of the war at 11 Birchin Lane, with an entrance through 67 Lombard Street. The company's London office, established in March, 1897, was one of the first offices of any American bank in Europe. During two world wars the Lombard Street branch has remained open, and in addition to maintaining continuous service to American and British commercial interests it has also served as an official United States depository and assisted American and Allied effective Feb. 2, 1946. Governments and military personnel in many financial capacities. The Guaranty also has a London office in Bush House, Kingsway, which was established 25 years ago, and has complete branches in Paris and Brussels.

Lt. Col. Garland H. Hayes returns to Bankers Trust Company of New York as Assistant Vice-President in the Corporate Trust Department. Mr. Hayes attended Washington and Lee, the University of Richmond and studied law at the Richmond Law School. He was with the Bankers Trust Com-pany from 1931 until ne lett in June of 1942 to join the Air Force.

Bankers Trust Company announces the election of Robert C. Gunnell, as Assistant Vice-Presi-Mr. Gunnell, recently a Liuetentant Colonel in the U. S. A. A. F., joined the staff of Bankers Trust Company July of 1928. He went into the Army in March of 1942. After graduating from Dartmouth, Mr. Gunnell attended the Harvard Graduate School of Business Administration. He is at present assigned to the Fifth Avenue office of the bank.

It was announced on Feb. 15 that the directors of the Grace National Bank of New York have voted in favor of a stock dividend of \$250,000 to be paid on June 28, and to call special meeting of the stockholders for the purpose of authorizing the necessary increase in capital from \$2,750,000 to \$3,000,000. At the same time the bank's surplus will be increased to \$3,000.000. The dividend will amount to approximately 9.09% and will be paid in lieu of the regular cash dividends of 6% per annum, payable 3% on March 1 and 3% on Sept. 1. The date of the special meeting will be announced later.

E. Chester Gersten, President of the Public National Bank and Trust Co. of New York, announced on Feb. 21 that Joseph W. Percival, who heads the Purchasing Department, was appointed an Assistant Cashier.

Irving Savings Bank of New York has arranged for an Internal Revenue agent to be at its uptown office, First Avenue at 81st Street, to give free advice on Federal income tax returns to the people of that neighborhood, it is announced by Robert H. Barnet, President of the bank. The Government agent will be on hand quirer" reports, in which it was through March 1st, and can be consulted by both depositors and

during regular

Cornelius V. Coleman, Executive Assistant of the New York Savings Bank at 8th Avenue and 14th Street, New York, died on Feb. 18, at the age of 47. Mr. Coleman was a well known lawyer and public speaker, and had received a law degree from Ford-ham University Law School. In the bank he was in charge of the handling of new mortgage loans.

After his graduation from Holy Cross College and Fordham he practiced law in New York with the Wall Street firm of Earle & Rust. Before joining the New York Savings Bank in 1944 Mr. Coleman was assistant to the president of the East New York Savings Bank in Brooklyn.

The Board of Governors of the Federal Reserve System announce that the Patchogue Citizens Bank

The Boston "Herald" on Feb. 19 reported that capital funds totalling \$375,000 have been received by the Waltham Citizens National Bank which completes payment in full of subscriptions to its shares, it is announced by Paul W. Bartel, President. He said that remodeling of the space to be occupied by the bank in the Parmenter Building at Moody and Felton Streets is expected to be under way in the near future.

David E. Williams, President of Corn Exchange National Bank and Trust Company of Philadelphia. announced that the Board of Directors has elected Richard F Fitzgerald as Auditor. Mr. Fitz-gerald has been with the bank since 1925 and returned recently from military service. As auditor he will report to Paul D. Williams, Comptroller.

Francis T. Reinhart, a Vice-President of the Land Title Bank & Trust Co. of Philadelphia, died on Feb. 18. He was 65 years of age. The Philadelphia "Evening Bulletin" states that Mr. Reinhart had been active in banking since 1910, when he joined the West End Trust Co. This was merged into the Land Title Bank in 1927. In 1933, Mr. Reinhart was elected Treasurer of the bank, and in 1940 a Vice-President.

The election of Howard W. Fisher as Secretary of the Fidelity Trust Company of Pittsburgh, Pa., was announced on Feb. 19 according to the Pittsburgh "Post Gazette" which also said:

He succeeds Frank T. Power, who is retiring after 37 years' tional Bank, he was elected Vice-service. Foster M. Mohney, Jr., an President. Mr. Hawes has occuemployee since 1928, was elected Assistant Secretary, and Karl W. Wiedt, who started as a messenger in 1901, was named Assistant Treasurer.

The Capital Bank of Cleveland, Ohio, announced on Feb. 18 its recent stock issue of 5,000 additional shares at \$45 had been oversubscribed. The sale increased the bank's capital and surplus to \$500,000 according to advices in the Chicago "Journal of Commerce.

Leo J. Van Lahr, President of the Provident Savings Bank & Trust Co., of Cincinnati, Ohio, died on Feb. 12 at the age of 73 years. He had been in the banking business for 55 years, the Cincinnati "En- practiced law in St. Louis for 20 also stated:

sion in 1890 with the Western the Liberty Central was merged Bank & Trust Co. Later, he helped with the First National Bank in to organize the Columbia Bank & St. Louis in 1929, he then became Savings Co., but shortly after the turn of the century became affiliated with the Provident Savings Bank & Trust Co.

The bank was established 1900, and within a year the late B. H. Kroger, grocery chain magnate, became associated with it. It was only three months later that Mr. Kroger brought Mr. Van Lahr into the organization, and he had remained with it ever since.

When Mr. Kroger retired from active participation in the bank's affairs, Mr. Van Lahr, who had been Vice-President, was elevated to the presidency. That was January 17, 1928.

Mr. Van Lahr had served two terms as President of the Cincinnati Clearing House Association and was a Trustee of the Fleischmann Foundation.

John W. O'Leary, Chicago banker and industrialist, died on Feb. 8, at the age of 70. Mr. O'Leary, according to the Chicago "Tribune" was a Director of the Chicago Great Western RR., and had been President of the old Chicago Trust Company and National Bank of the Republic. The advices added:

Mr. O'Leary was President of the American Enterprise Association. He also had served as President of the United States Chamber of Commerce, the Chicago Association of Commerce, and the National Metal Trades Associa-

He was a director of Kelly Steel Works. Mr. O'Leary was a mem-ber of President Wilson's first industrial conference and was appointed by President Coolidge to the International Economic Conference at Geneva, Switzerland.

The Board of Directors of the First National Bank of St. Louis has announced the resignation of Richard S. Hawes, Senior Vice-President, who will retire March 1st after more than 50 years of service. Mr. Hawes' banking experience has been entirely with the First National Bank and its predecessors. Mr. Hawes stated on Feb. 24 that it is his purpose to relax and rest, and to do many things which he has heretofor never had time for. William C. Connett has been elected First Vice-President and a Director of the First National, succeeding Mr.

Mr. Hawes was born in Covington, Ky., and is the grandson of Richard Hawes, Confederate Governor of Kentucky. His first job was in St. Louis as office boy for the Mississippi River Commission. On Jan. 1, 1893, he secured a position with the old Chemical National Bank, which in 1897 was succeeded by the Third National Bank. In 1911, he was elected Vice-President of the Third National Bank. In 1919, when the First National Bank in St. Louis was organized, through consolidation of the Mechanics-American National Bank and the St. Louis Union Bank with the Third Napied many positions of honor and responsibility in the banking world and in civic life in St. Louis. In 1913, he was elected President of the Association of Reserve City Bankers. During World War I, he was Chairman of the Bankers Committee of the 8th Federal Reserve District for the Liberty Loan Campaigns; in 1915, President of the Missouri Bankers Association; in 1919. President of the American Bankers Association; in 1932 to 1937, President of the St. Louis Clearing House Association. He s a member of the Reconstruction Finance Corporation's Advisory Committee for the St. Louis District. Mr. Hawes is a past President of the St. Louis Chamber of Commerce. Mr. Connett vears before being elected Vice-President of the old Liberty Cen-

a Vice-President of that bank. Mr Connett has long been active in civic affairs. He has served as Chairman of the Building Committee which built the present Missouri Athletic Club, and later was President, Chairman Metropolitan St. Louis Relief Committee; President, United Charities of St. Louis, and Chairman, St. Louis Housing Authority, and has also been identified with other activities. At present he is a Director Provident Association: the member, Board of Directors and Executive Committee, St. Louis War Chest, and member, Executive Committee and Treasurer, St. Louis United Service Organizations. Mr. Connett is a member of the Board of Directors of the following organizations: First National Bank in St. Louis, St. Louis Public Service Company, South-ern Acid & Sulphur Company Potosi Tie & Timber Company and Mountain Valley Water Company.

At a dinner which honored 21 employees of the First National Bank and the Kentucky Trust Company of Louisville, Ky., who have been with the banks for a quarter of a century, Embry Lee Myers, Cashier of the Kentucky Trust and John H. Stockhoff, Vice-President of the First National, were guests of honor. Each has served 42 years with his respective institution.

Robert Strickland, President of the Trust Company of Georgia, Atlanta, Ga., announced recently that Lloyd B. Hatcher, recently discharged from the Marine Corps, has returned to the bank as Assistant Vice President. The Atlanta 'Constitution" of Jan. 27, from which this is learned, reports that Mr. Hatcher became connected with the bank in 1935.

Charles L. Pierce of Palm Beach was elected President and a director of the First National Bank, Ft. Lauderdale, Fla., while W. W. McEachern was elevated to Chairman of the Executive Committee at the director's meeting held on Feb. 15. Other advancements announced were those of Alwen Neuharth to Executive Vice-President, E. R. Mackay to Assistant Vice-President; John C. Mon-aghan to Cashier; new officers elected were Arthur H. Ogle, Vice-President; George E. Hossler, Assistant Cashier; and George W English, Attorney. Mr. McEachern relinquished his duties to Mr. Pierce on Feb. 15 because of ill health, but will remain as a director and head of the Executive Committee. The new President, Mr. Pierce, has had long experience in the banking field, having commenced as a clerk in the Bank of Palm Beach in 1919. He joined the staff of the First National-Bank in Palm Beach as Assistant Bank in Palm Beach as Assistant Cashier in 1937, after several years in the mercantile clothing business in West Palm Beach Mr ness in West Palm Beach. Mr. Pierce served in all departments tional Bank, he was elected Vice-President. Mr. Hawes has occu-in 1939 and Vice-President on Dec. 6, 1940. He was head of the commercial loan department and served on the committee for personal and automobile loans which loaned over \$6,000,000 to more than 20,000 personal loan customers in the Palm Beach area. The Navy claimed Mr. Pierce for both wars, as Ensign during the first war and as a Lieutenant Commander in the second.
